This task was developed by high school and postsecondary mathematics and agriculture sciences educators, and validated by content experts in the Common Core State Standards in mathematics and the National Career Clusters Knowledge & Skills Statements. It was developed with the purpose of demonstrating how the Common Core and CTE Knowledge & Skills Statements can be integrated into classroom learning – and to provide classroom teachers with a truly authentic task for either mathematics or CTE courses.

**TASK: CORN AND OATS**

**TARGET COMMON CORE STATE STANDARD(S) IN MATHEMATICS:**

<table>
<thead>
<tr>
<th>Standard</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>N.Q.1</td>
<td>Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.*</td>
</tr>
<tr>
<td>N.Q.2</td>
<td>Define appropriate quantities for the purpose of descriptive modeling.*</td>
</tr>
<tr>
<td>N.Q.3</td>
<td>Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.*</td>
</tr>
<tr>
<td>6.RP.3d</td>
<td>Use ratio reasoning to convert measurement units; manipulate and transform units appropriately when multiplying or dividing quantities.</td>
</tr>
<tr>
<td>7.RP.1</td>
<td>Compute unit rates associated with ratios of fractions, including ratios of lengths, areas, and other quantities measured in like or different units.</td>
</tr>
<tr>
<td>7.RP.3</td>
<td>Use proportional relationships to solve multi-step ratio and percent problems.</td>
</tr>
<tr>
<td>7.NS.3</td>
<td>Solve real world problems involving the four operations with rational numbers.</td>
</tr>
<tr>
<td>7.EE.3</td>
<td>Solve multi-step real life and mathematical problems posed with positive and negative rational numbers in any form, using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies.</td>
</tr>
</tbody>

AGPB01.03.01 Develop a production plan that applies the fundamentals of plant management.
AGPB01.03.03 Handle crops using methods that apply fundamentals of plant management.
AGPE01.01.02 Apply cartographic skills.
AGPE01.01.03 Obtain planting data by monitoring natural resource status.

**RECOMMENDED COURSE(S):**
Algebra 1; Geometry; Integrated Math I or II; Plant Science; Crop Science; Agribusiness Management

**ADDITIONAL INSTRUCTIONS:**
This task requires knowledge of the measures of the Public Land Survey System (PLSS). It can be completed in one class period, but could also be extended over multiple days.

* Modeling standards appear throughout the CCSS high school standards and are indicated by a star symbol (*).

**About the Common Core State Standards in Mathematics**
The Common Core State Standards (CCSS) for Mathematics are organized by grade level in grades K–8. At the high school level, the standards are organized by conceptual category (number and quantity, algebra, functions, geometry, and probability and statistics), showing the body of knowledge students should learn in each category to be college and career ready, and to be prepared to study more advanced mathematics. The Standards for Mathematical Practice describe ways in which developing student practitioners of the discipline of mathematics increasingly ought to engage with the subject matter as they grow in mathematical maturity and expertise throughout the elementary, middle and high school years. [www.corestandards.org](http://www.corestandards.org)

**About the Common Core State Standards in English Language Arts/Literacy**
The Common Core State Standards (CCSS) for ELA/Literacy are organized by grade level in grades K–8. At the high school level, the standards are organized by 9-10 and 11-12 grade bands. Across K-12 there are four major strands: Reading, Writing, Speaking and Listening, and Language. The CCSS also include Standards for Literacy in History/Social Studies, Science, and Technical Subjects, with content-specific (Reading and Writing) literacy standards provided for grades 6-8, 9-10, and 11-12, to demonstrate that literacy needs to be taught and nurtured across all subjects. [www.corestandards.org](http://www.corestandards.org)

**About the Career Cluster Knowledge and Skill Statements**
As an organizing tool for curriculum design and instruction, Career Clusters™ provide the essential knowledge and skills for the 16 Career Clusters™ and their Career Pathways. It also functions as a useful guide in developing programs of study bridging secondary and postsecondary curriculum and for creating individual student plans of study for a complete range of career options. As such, it helps students discover their interests and their passions, and empowers them to choose the educational pathway that can lead to success in high school, college and career. [http://www.careeredge.org/career-clusters/resources/clusters/agriculture.html](http://www.careeredge.org/career-clusters/resources/clusters/agriculture.html). Although not included in this template, all Clusters and Pathways have Foundational Academic Expectations and Essential Knowledge & Skills Statements, which, in some cases, overlap with the Common Core State Standards.

**KEY TERMS**
- Parcel, Section, Township, Range
- Quarter Section, Half Section
- Fertilizer, dry granular fertilizer
- Nitrogen (N), Phosphorus (P), Potassium (K)
- Hundred Weight / Centum Weight (cwt)
- Bulk see tenders
- Germination
- Calibrating
- Plant population
CORN AND OATS\(^1\) – The Task

You are asked to assist Producer Bob with some of the management decisions he faces. Bob is a dry land farmer (no irrigation) and has the following information available for you to use.

*Show all your work as you answer the questions below:*

**LAND OWNERSHIP**
Bob owns the following parcels of land. (One section = 640 acres)

Using the Public Land Survey System (PLSS), calculate how many acres are in the following parcels:

- Parcel A: S1/2 Section 25, Township 13, Range 14 W
- Parcel B: NW1/4 Section 24, Township 13, Range 14 W
- Parcel C: NW1/4NE1/4 Section 23, Township 13, Range 14 W
- Parcel D: Lot 1A Section 23, Township 13, Range 14 W (triangle plot with a 1240 ft. long base and a height of 660 ft.)

1. Use shading to graph parcels A, B, and C on the grids below.

   ![Parcel Grids](image)

2. How many total cropland acres does Bob have?

**FERTILIZATION**
Bob is planning to plant 80% of his acres to corn and the remainder of his acres to oats. His fertilization plans for his corn acres will be to apply 60 pounds of Nitrogen (N) per acre in the fall and side dress 50 pounds of Nitrogen per acre post emergent (after the corn emerges). Bob will use the fertilizer Anhydrous Ammonia (which is 60% N) for his corn crops. Additionally, Bob is planning to apply 80 pounds of Nitrogen per acre to his oat crop at planting time using a dry granular product that is a 20-10-5 (Nitrogen (N) – Phosphorus (P) – Potassium (K)) fertilizer.

3. How many tons of Anhydrous Ammonia will Bob need to contract for his corn?

4. How many tons of dry, granular fertilizer will Bob need to purchase for his oats?

5. How many lbs of Potassium will Bob be applying to his oats crop through the application of the dry granular fertilizer?

---

\(^1\) Adapted from items on the Iowa FFA CDE – Agronomy Examination
http://www.agiowa.org/cde_rules.html
PLANTING
Bob purchases his seed corn from a local dealer in bulk seed tenders with a weight of 1500 pounds. There are 120,000 seeds per cwt (centum weight or hundred weight) for his seed corn variety. His goal is to have a plant population of 26,000 per acre. Bob assumes a germination rate of 96%.

6. How many full bulk seed tenders and 50 lb bags of seed corn will Bob need to order from the local dealer in order to have minimum excess seed corn? (Tender dimensions: 4’x4’x4’)

Bob needs assistance with setting his drilling equipment. He will be drilling his oat crop at a rate of 30 seeds per square foot. His oat drill has six-inch row spacing and his oat variety has 12,000 seeds per pound. To calibrate his equipment he is planning on driving 25 feet and collecting from four rows of his drill and then with your assistance he will be measuring the oats planted. His scale only measures in grams (454 grams per lb).

7. When calibrating Bob’s drill, how much seed should be collected to reach the target oat crop-seeding rate?
Corn and Oats – *Possible Solution(s)*

The following table indicates some distance and area conversions in the PLSS. Those indicated in yellow highlighting are used in this task:

<table>
<thead>
<tr>
<th>dimensions</th>
<th>area</th>
<th>notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>(miles)</td>
<td>(miles$^2$)</td>
<td>area (acres)</td>
</tr>
<tr>
<td>Quadrangle</td>
<td>24 by 24</td>
<td>576</td>
</tr>
<tr>
<td>Township</td>
<td>6 by 6</td>
<td>36</td>
</tr>
<tr>
<td>Section</td>
<td>1 by 1</td>
<td>1</td>
</tr>
<tr>
<td>Half-section</td>
<td>1 by $\frac{1}{2}$</td>
<td>$\frac{1}{2}$</td>
</tr>
<tr>
<td>Quarter-section</td>
<td>$\frac{1}{2}$ by $\frac{1}{4}$</td>
<td>$\frac{1}{4}$</td>
</tr>
<tr>
<td>Half of quarter-section</td>
<td>$\frac{1}{2}$ by $\frac{1}{4}$</td>
<td>$\frac{1}{8}$</td>
</tr>
<tr>
<td>Quarter of quarter-section</td>
<td>$\frac{1}{4}$ by $\frac{1}{16}$</td>
<td>$\frac{1}{16}$</td>
</tr>
</tbody>
</table>

**LAND OWNERSHIP**

Parcel A: S1/2 Section 25, Township 13, Range 14 W: $\frac{1}{2} \times 640 = 320$ acres (since this is a half-section)

Parcel B: NW1/4 Section 24, Township 13, Range 14 W: $\frac{1}{4} \times 640 = 160$ acres (since this is a quarter-section)

Parcel C: NW1/4NE1/4 Section 23, Township 13, Range 14 W: $\frac{1}{4} \times \frac{1}{4} \times 640 = 40$ acres (since this is one quarter of a quarter-section)

1. Parcel A

2. Parcel B

3. Parcel C

2. Parcel D: Lot 1A Section 23, Township 13, Range 14 W (triangle plot measuring 1240 ft. long and 660 ft. wide): 9.4 acres (see below)

\[
\text{Area} = \frac{1}{2} \times \text{bh} \\
A = \frac{1}{2} \times 1240 \text{ ft} \times 660 \text{ ft} = 409,200 \text{ ft}^2 \quad (1 \text{ acre} = 43,560 \text{ ft}^2) \\
409,200 \text{ ft}^2 \div 43,560 \text{ ft}^2 \text{ per acre} = 9.39 \text{ acres}
\]

Total Acres: \(A + B + C + D = 320 + 160 + 40 + 9.4 = 529.4\) acres

Bob has a total of 529.4 cropland acres

**FERTILIZATION**

3. First determine how many acres are planted to corn:

\[0.8(529.4 \text{ acres}) = 423.52 \text{ acres are corn}\]
Then determine how many pounds of nitrogen (N) will be needed to cover all of the corn crops:

For each acre, Bob will need:

60 lbs/acre (in the fall) + 50 lbs/acre (post-emergent) = 110 lbs/acre of N

Bob plans to plant 423.52 acres to corn, so 110 lbs/acre x 423.52 acres = **46,587.2 lbs of N** needed to cover all of the corn crops.

Since the fertilizer Anhydrous Ammonia is only 60% N, the next step is set up a proportion to find out the total amount of fertilizer needed:

\[
\frac{46,587.2}{x} = \frac{60}{100} \\
60x = 4,658,720 \\
x = 77,645.33 \text{ lbs of fertilizer}
\]

Then convert from lbs to tons (2000 lbs per ton): 77,645.33 lbs/2000 lbs per ton = **38.8 tons Anhydrous Ammonia**

4. Determine how many acres are planted to oats:

529.4 – 423.52 = 105.88 acres are oats

Bob needs 80 lbs of N for each acre of oats, therefore:

105.88 acres of oats x 80 lbs/acre = **8,470.4 lbs of N**

Since the granular fertilizer is 20% N, the next step is to set up a proportion to find out the total amount of fertilizer needed:

\[
\frac{8,470.4}{x} = \frac{20}{100} \\
20x = 847,040 \\
x = 42,352 \text{ lbs of fertilizer}
\]

Then convert from lbs to tons (2000 lbs per ton): 42,352/2000 = **21.18 tons granular fertilizer**

5. Since the ratio in the fertilizer is 20%N, 10%P, 5%K:

\[
x / 42,352 = 5 / 100 \\
100x = 5(42,352) = 211,760 \\
x = 2,117.6 \text{ lbs of Potassium}
\]

PLANTING

6. In order to find how many seeds Bob needs, the first step is to answer the question **“26,000 is 96% of what number?”**, since the germination rate is 96%:

\[
26000 / x = 96 / 100 \\
96x = 26000(100) = 2,600,000 \\
x = 27,084 \text{ seeds}
\]

Therefore, 27,084 seeds will need to be planted per acre to realize 26,000, given the germination rate.

Then multiply the number of seeds per acre by the number of acres of corn:

27,084 seeds/acre x 423.52 acres of corn = **11,470,616 seeds needed**
How many seeds are in each tender? There are 120,000 seeds per cwt, with a cwt = 100 lbs. Each tender
weighs 1500 lbs. To convert the weight of each tender to cwts, divide by 100:

Weight of a tender in cwt:  1500 lbs/100 lbs per cwt = 15 cwt.

To find the seeds per tender, multiply the number of seeds per cwt by the number of cwts:

120,000 seeds/cwt  x 15 cwt = 1,800,000 seeds per tender

To determine the numbers of tenders needed and the number of 50 pound bags needed (in order to have
minimum excess seed), perform the following calculations:

11,470,616 seeds needed/ 1,800,000 seeds per tender = 6.37 tenders

Therefore, Bob should buy 6 tenders, which account for 10,800,000 seeds.

Since 11,470,615 seeds are needed that means that (11,470,615 − 10,800,000 seeds) = 670,615 seeds still
need to be purchased. Excess seed will be minimized by purchasing these in 50 lb bags. If there are
120,000 per cwt (100 lbs) then there are 60,000 seeds in a 50-lb bag.

670,615 seeds/ 60,000 seeds per bag = 11.177 bags. This means that Bob will also need to purchase 12 50-
lb bags of corn seed.

Bob needs to order 6 tenders and 12 50-lb bags.

7. First find the area the drill covers:

6 inches = .5 ft

Therefore: Area to be covered during calibration = .5 ft x 4 rows x 25 ft = 50

Then multiply the area by the number of seeds per square foot: 50 x 30 seeds/ = 1500 seeds.

To find how many pounds: 1500 seeds / 12,000 seeds per lb = 0.125 lbs.

Then convert to grams: 454 grams per lb x 0.125 lbs = 56.75 grams of seed
Corn & Oats – Appendix: Alignment Ratings

The rating system used in the following charts is as follows:

3  EXCELLENT ALIGNMENT:
The content/performance of the task is clearly consistent with the content/performance of the Common Core State Standard.

2  GOOD ALIGNMENT:
The task is consistent with important elements of the content/performance of the CCSS statement, but part of the CCSS is not addressed.

1  WEAK ALIGNMENT:
There is a partial alignment between the task and the CCSS, however important elements of the CCSS are not addressed in the task.

N/A:
For Mathematical Practices a content rating does not apply.

In the charts C = Content Rating and P = Performance Rating

COLOR KEY
- Black = Part of CCSS/K&S Statement aligned to task
- Gray = Part of CCSS/K&S Statement not aligned to task
## Task-to-Mathematical Practice Alignment Recording Sheet
