Toolkit for Evaluating Alignment of Instructional and Assessment Materials to the Common Core State Standards

Instructional Materials Evaluation Tool (IMET)
For evaluating alignment of a comprehensive textbook or textbook series.

EQuIP Quality Review Rubric
For evaluating alignment of lessons, units and modules.

Assessment Evaluation Tool (AET)
For evaluating alignment of grade or course-level assessment materials.

Assessment Passage & Item Quality Criteria Checklists
For evaluating the alignment of individual assessment passages, items and tasks.

Additional Resources for Evaluating Alignment of Instructional Materials

Appendix: Publisher’s Criteria for the Common Core State Standards

Section 1

Introduction
Introduction

The Common Core State Standards (CCSS) are a set of academic standards in mathematics and English language arts/literacy that are grounded in evidence and designed to ensure that all students have the academic knowledge and skills they need in these core subjects to succeed after high school. The CCSS were developed in a state-led process under the leadership of governors and chief state school officers and participation from 48 states. The process included the involvement of state departments of education, districts, teachers, community leaders, experts in a wide array of fields and professional educator organizations.

A good place to begin to understand the CCSS is through a study of the standards themselves and the key instructional shifts required in each discipline. In English language arts/literacy, students will be exposed to a balance of literary and informational texts to build a growing base of knowledge and will be expected to cite evidence from within the texts in order to answer questions and develop written or verbal responses. Students will also be expected to develop facility with academic language and read texts that increase in complexity as they progress so that all students are ready for the demands of college- and career-level reading no later than the end of high school. The instructional shifts in English language arts/literacy are as follows:

1. **Complexity**: Regular practice with complex text and its academic language
2. **Evidence**: Reading, writing, and speaking grounded in evidence from text, both literary and informational
3. **Knowledge**: Building knowledge through content-rich non-fiction

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics. These principles are meant to fuel greater achievement in a deep and rigorous curriculum, one in which students acquire conceptual understanding, procedural skill and fluency, and the ability to apply mathematics to solve problems. Thus, the instructional shifts in mathematics are as follows:

1. **Focus** strongly where the Standards focus
2. **Coherence**: Think across grades and link to major topics within the grade
3. **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

To ensure that all students are able to meet these high expectations, educators need access to high-quality and well-aligned instructional and assessment materials. In support of the work being done by both educators and developers to meet this need, Achieve, the Council of Chief State School Officers and Student Achievement Partners have developed this Toolkit for Evaluation Alignment of Instructional and Assessment Materials. The purpose of the Toolkit is to catalyze the impact that the CSSS can have on student achievement by increasing the prevalence of CCSS-aligned, high-quality instructional and assessment materials.

1. For more information about the shifts in English language arts/literacy, see achievethecore.org/elalitshifts
2. For some of the sources of evidence consulted during the standards development process, see pp 91-93 of CCSSM.
3. For more information about the shifts in mathematics, see achievethecore.org/mathshifts

118 Mathematics, Grades K–8
159 Mathematics, High School
Instructional Materials Evaluation Toolkit (IMET)

ELA/Literacy, K–2
Instructional Materials Evaluation Tool
ELA/Literacy, Grades K-2

What Are the Purposes of the IMET?

This ELA/Literacy IMET is designed to help educators determine whether or not instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts at the heart of the Common Core State Standards are:

- **Complexity**: Regular practice with complex text and its academic language
- **Evidence**: Reading, writing, and speaking grounded in evidence from text, both literary and informational
- **Knowledge**: Building knowledge through content-rich non-fiction

The IMET draws directly from the following documents:

- Common Core State Standards for English Language Arts & Literacy in History/Social Studies, Science, and Technical Subjects (http://www.corestandards.org/ELA-Literacy/)
- Supplement to Appendix A of the Common Core State Standards for ELA/Literacy: New Research on Text Complexity (http://www.corestandards.org/assets/E0813_Appendix_A_New_Research_on_Text_Complexity.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students’ actual learning experiences approach the complexity, evidence and knowledge-building of the Standards.

3. Developing materials: Those developing new materials locally can use this tool as guidance for creating aligned ELA/literacy curricula.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject matter and pedagogical expertise. Evaluators should be well versed in the Standards (http://www.corestandards.org/ELA-Literacy/) for all grades in which materials are being evaluated. Evaluators also should be familiar with the substantial instructional Shifts of Complexity, Evidence and Knowledge that are listed above.
Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. In addition, each evaluator should have a reference copy of the Common Core State Standards for ELA/Literacy and the Publishers’ Criteria for the Common Core State Standards in ELA/Literacy grades K – 2.

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers’ Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process.

Sections 1 – 3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria (p. 9)

• The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

• Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metrics.

• Record and explain the evidence upon which the rating is based

Continue to Section 2: Alignment Criteria (p. 17)

• The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

• Examine the materials in relation to these criteria, assigning each metric a point value. Rate each criterion as “Meets” or “Does Not Meet” based on the number of points assigned. The more points the materials receive on the Alignment Criteria, the better they are aligned.

• Record and explain the evidence upon which the rating is based.

Complete Section 3: Evaluation Summary (p. 58)

• Compile all of the results from Sections 1 and 2 to determine if the instructional materials are aligned to the Shifts and major features of the CCSS.

Proceed to Section 4: Indicators of Quality (p. 60)

• Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not for alignment to the CCSS, but they provide valuable information about additional curricula characteristics. Evaluators may want to add their own indicators to the examples provided.
Directions for Non-Negotiable 1

Complexity of Texts

Non-Negotiable 1: ELA/literacy texts have the appropriate level of complexity for the grade, according to both quantitative measures and qualitative analysis of text complexity—texts are worthy of student time and attention.

Intended for anchor texts read aloud by the teacher in grades K – 1. Anchor texts are texts designed to be the center of attention for development of reading comprehension. Evaluations of text complexity are only applicable to grade 2 student reading material. For student reading materials in grades K – 1 refer to the Alignment Criteria for Foundational Skills 4B and 4D.

Required Materials

• Teacher's edition and student materials

• Appendix A pages 1 – 10 for more on the vital role text complexity plays in the CCSS (http://www.corestandards.org/assets/Appendix_A.pdf)

• Supplement to Appendix A: New Research on Text Complexity (http://www.corestandards.org/assets/E0813_Appendix_A_New_Research_on_Text_Complexity.pdf)

Rating this Criterion

Non-Negotiable Alignment Criteria are defined as the set of criteria that must be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each metric of a Non-Negotiable Alignment Criterion must be met in order for the criterion to be met.

1. Evaluate carefully how completely the submission meets each of the metrics for this Criterion below.

2. Provide specific examples of evidence in support of the rating, including pointing out specific gaps in the materials.

3. When the section is finished, if any one of the metrics is rated as Does Not Meet, then rate the overall Non-Negotiable 1 as Does Not Meet. If all metrics are rated as Meets, then rate the overall Non-Negotiable 1 as Meets.
Non-Negotiable 1
Complexity of Texts

Metric

NN Metric 1A:
100% of anchor texts must be accompanied by specific evidence that they have been analyzed with at least one research-based quantitative measure. Read-aloud texts should measure within or above the grades 2 – 3 band. Second grade anchor texts should measure within the grades 2 – 3 band.

How to Find the Evidence

- Look for a publisher-supplied list of all texts in the submission with their quantitative measures.
- District conducts evaluation of all texts in the submission.
- Look for other evidence that texts have been measured by a quantitative measure.

Evidence

Rating

☐ Meets
☐ Does Not Meet / Insufficient Evidence
## Non-Negotiable 1

### Complexity of Texts

<table>

</tr>
</tbody>
</table>
Non-Negotiable 1
Complexity of Texts

Non-Negotiable 1: ELA/literacy texts have the appropriate level of complexity for the grade, according to both quantitative measures and qualitative analysis of text complexity—texts are worthy of student time and attention.

Rating for Non-Negotiable 1

If both metrics were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet, then rate Non-Negotiable 1 as Does Not Meet.

Check the final rating. Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Strengths/Weaknesses:

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 58.
Directions for Non-Negotiable 2
Text-Dependent and Text-Specific Questions

Non-Negotiable 2: At least 80% of all questions in the submission are high-quality text-dependent and text-specific questions. The overwhelming majority of these questions are text-specific and draw student attention to the text.

Related to texts read aloud by the teacher in grades K – 2 and student reading materials beginning in grade 2 only. For questions/tasks related to student reading materials in grades K – 1 refer to the Alignment Criterion for Foundational Skills.

Required Materials

• Teacher’s edition and student materials

• Appropriate grade level set of ELA/Literacy Standards

• Tools for evaluating the quality of text-dependent questions
  (http://achievethecore.org/page/710/text-dependent-question-resources)

Rating this Criterion

Non-Negotiable Alignment Criteria are defined as the set of criteria that must be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each subcomponent of a Non-Negotiable Alignment Criterion must be met in order for the criterion to be met.

1. Evaluate carefully how completely the submission meets each of the Criteria below.

2. Provide specific examples of evidence in support of the rating, including pointing out specific gaps in the materials.

3. When the section is finished, if any one of the metrics is rated as Does Not Meet, then rate the overall Non-Negotiable 2 as Does Not Meet. If all metrics are rated as Meets, then rate the overall Non-Negotiable 2 as Meets.
Non-Negotiable 2
Text-Dependent and Text-Specific Questions

Metric

NN Metric 2A:
Eighty percent of questions and tasks are text-dependent to reflect the requirements of Reading Standard 1 (by requiring use of textual evidence to support valid inferences from the text).

How to Find the Evidence

Analyze a large* sample set of questions from across the submission, including culminating tasks and extended response tasks, and evaluate them for text dependency/text specificity and require readers to produce evidence.

*Recommendation: analyze one in every four sets of questions and tasks completely to get a valid sample size.

Evidence

Rating

Non-Negotiable 2
Text-Dependent and Text-Specific Questions

Non-Negotiable 2: At least 80% of all questions in the submission are high-quality text-dependent and text-specific questions. The overwhelming majority of these questions are text-specific and draw student attention to the text.

Rating for Non-Negotiable 2

If both metrics were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more metrics were rated as Does Not Meet, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 58.

Now continue by evaluating the Alignment Criterion 1 for Range and Quality of Texts
Directions for Alignment Criterion 1
Range and Quality of Texts

Alignment Criterion 1: Materials must reflect the distribution of text types and genres required by the Standards.

Required Materials

- Teacher's edition and student materials
- Appropriate grade level set of ELA/Literacy Standards

Rating this Criterion

1. Rate how well the submission meets each of the Criteria below. Ratings are Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

2. Provide specific examples of evidence in support of the rating, including pointing out specific gaps in the materials.

3. When the section is finished, add up the rating and enter it at the bottom of the section. A rating of at least 7 out of 10 points means that the materials have met this Alignment Criterion.

4. Lastly, record the rating Meets, Does Not Meet or Not Applicable for this section in the Evaluation Summary on page 58 before proceeding to Alignment Criterion 2. The more points the materials receive on the Alignment Criteria, the better they are aligned.
Alignment Criterion 1
Range and Quality of Texts

Metric

AC Metric 1A:
Materials pay careful attention to providing a sequence or collection of texts that build knowledge systematically through reading, writing, listening and speaking about topics under study, particularly for texts read aloud by the teacher in grades K – 2 and student reading materials in grade 2.

How to Find the Evidence
Examine the table of contents at each grade level to see if the collection is carefully sequenced and organized with the aim of increasing knowledge on several topics of focused inquiry.

Other evidence as appropriate.

Evidence

Rating

☐ Meets (2)
☐ Partially Meets (1)
☐ Does Not Meet (0)
Alignment Criterion 1
Range and Quality of Texts

AC Metric 1B:
Within a sequence or collection of texts, specific anchor texts of grade level complexity (keystone texts) are selected for their quality as being worthy of especially careful reading. This may be for texts read aloud by the teacher and for student reading materials in grade 2. Other texts in the collection can and should vary widely in complexity to accommodate a full range of student independent reading ability.

How to Find the Evidence
Evaluate sample lessons to ensure they call for careful reading through the instructions offered to teachers and students.

Rating

☐ Meets (2)
☐ Partially Meets (1)
☐ Does Not Meet (0)

Alignment Criterion 1
Range and Quality of Texts

Metric

AC Metric 1E:
Student reading materials markedly increase the opportunity for regular independent reading of texts that develop foundational skills, build knowledge, and increase student ability with complex texts.

How to Find the Evidence
Examine a representative sample of texts or the description of the supplemental materials to evaluate.

Rating

☐ Meets (2)
☐ Partially Meets (1)
☐ Does Not Meet (0)
Alignment Criterion 1
Range and Quality of Texts

Alignment Criterion 1: Materials must reflect the distribution of text types and genres required by the Standards.

Points Assigned for Alignment Criterion 1

Materials must earn at least 7 out of 10 points to meet Alignment Criterion 1. If materials earn less than 7 points, the Criterion has not been met. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Rating

☐ Meets
☐ Does Not Meet

Strengths / Weaknesses:

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 58.
Directions for Alignment Criterion 2
Questions Support Student Learning

Alignment Criterion 2: Questions support students in building reading comprehension, in finding and producing the textual evidence to support their responses, and in developing grade level academic language.

Required Materials

- Teacher’s edition and student materials
- Appropriate grade level set of ELA/Literacy Standards
- Tools for evaluating the quality of text dependent questions (http://achievethecore.org/page/710/text-dependent-question-resources)

Rating this Criterion

1. Rate how well the submission meets each of the Criteria below. Ratings are Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

2. Provide specific examples of evidence in support of the rating, including pointing out specific gaps in the materials.

3. When the section is finished, add up the rating and enter it at the bottom of the section. A rating of at least 4 out of 6 points means that the materials have met this Alignment Criterion.

4. Lastly, record the rating Meets, Does Not Meet or Not Applicable for this section in the Evaluation Summary on page 58 before proceeding to Alignment Criterion 3. The more points the materials receive on the Alignment Criteria, the better they are aligned.
Alignment Criterion 2
Questions Support Student Learning

Metric

AC Metric 2A:
High-quality sequences of text-dependent questions can address any of the following: sustained attention to making meaning from the text, rereading to gain evidence and clarity, and the acquisition of foundational skills.

How to Find the Evidence

Analyze a large* sample of questions from different grade levels/sections of the program.

*Recommendation: analyze one in every four sets of questions and tasks completely to get a valid sample size

Alignment Criterion 2
Questions Support Student Learning

Alignment Criterion 2: Questions support students in building reading comprehension, in finding and producing the textual evidence to support their responses, and in developing grade level academic language.

Points Assigned for Alignment Criterion 2

Materials must earn at least 4 out of 6 points to meet Alignment Criterion 2. If materials earn less than 4 points, the Criterion has not been met. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Rating

☐ Total (6 points possible)

☐ Meets

☐ Does Not Meet

Strengths / Weaknesses:

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 58.
Directions for Alignment Criterion 3
Writing to Sources and Research

Alignment Criterion 3: Written tasks at all grade levels require students to confront the text directly, to draw on textual evidence, and to support valid inferences from the text.

Required Materials

• Teacher’s edition and student materials

• Appropriate grade level set of ELA/Literacy Standards

Rating this Criterion

1. Rate how well the submission meets each of the Criteria below. Ratings are Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

2. Provide specific examples of evidence in support of the rating, including pointing out specific gaps in the materials.

3. When the section is finished, add up the rating and enter it at the bottom of the section. A rating of at least 6 out of 8 points means that the materials have met this Alignment Criterion.

4. Lastly, record the rating Meets, Does Not Meet or Not Applicable for this section in the Evaluation Summary on page 58 before proceeding to Alignment Criterion 4. The more points the materials receive on the Alignment Criteria, the better they are aligned.
Alignment Criterion 3
Writing to Sources and Research

Metric

AC Metric 3A:
Writing to sources is a key task. Students are asked in their writing to analyze and synthesize sources, as well as to present careful analysis, well-defended claims and clear information. Materials are organized to elicit responses to sources in age-appropriate ways (could include activities such as dictation, making pictures to express thoughts, etc., in addition to writing).

How to Find the Evidence

Examine a sampling (minimum 8 per grade) of the writing tasks for each section, listing any tasks or items that do not require writing to sources. Calculate a percentage of aligned tasks. For alignment, three-quarters of tasks should require writing to sources.

- [ ] Does Not Meet (0)
Alignment Criterion 4
Foundational Skills

Metric

AC Metric 4B:
Submissions include a variety of student reading material that allows for systematic, regular and frequent practice of all foundational skills.

How to Find the Evidence

Examine instructions, questions and tasks in relevant foundational and other sections to see if this is expected.

Evidence

Rating

☐ Meets (2)
☐ Partially Meets (1)
☐ Does Not Meet (0)
### Metric

**AC Metric 4C:**
Materials provide regular practice in encoding (spelling) and decoding (reading) the sound-symbol relationships of English.

### How to Find the Evidence

Examine the table of contents to see if this is addressed. Read the prefatory materials to see the rationale for how this is approached.

### Evidence

<table>

- [ ] Partially Meets (1)
- [ ] Does Not Meet (0)
Alignment Criterion 4: Materials provide explicit and systematic instruction and diagnostic support in concepts of print, phonological awareness, word awareness, phonics and vocabulary, development, syntax, and fluency. These foundational skills are necessary and central components of an effective, comprehensive reading program designed to develop proficient readers with the capacity to comprehend texts across a range of types and disciplines.

Points Assigned for Alignment Criterion 4

Materials must earn at least 6 out of 8 points to meet Alignment Criterion 4. If materials earn less than 6 points, the Criterion has not been met. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Before moving to Alignment Criterion 5, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 58.
Directions for Alignment Criterion 5

Alignment Criterion 5: Materials must adequately address the Language Standards for the grade.

Required Materials

• Teacher’s edition and student materials

• Appropriate grade level Language Standards (http://www.corestandards.org/ELA-Literacy/L/language-progressive-skills/)

Rating this Criterion

1. Rate how well the submission meets each of the Criteria below. Ratings are Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

2. Provide specific examples of evidence in support of the rating, including pointing out specific gaps in the materials.

3. When the section is finished, add up the rating and enter it at the bottom of the section. A rating of at least 4 out of 6 points means that the materials have met this Alignment Criterion.

4. Lastly, record the rating Meets, Does Not Meet or Not Applicable for this section in the Evaluation Summary on page 58 before proceeding to Alignment Criterion 6. The more points the materials receive on the Alignment Criteria, the better they are aligned.
Alignment Criterion 5
Language

**AC Metric 5A:**
Materials address the grammar and language conventions specified by the Language Standards at each grade level.

**How to Find the Evidence**
Examine the sections addressing this to see if instructions include this.

**SECTION 2**

**Instructional Materials Evaluation Toolkit (IMET)**

**ELA/Literacy, Grades K–2**
Alignment Criterion 6
Speaking and Listening

Alignment Criterion 6: To be CCSS-aligned, speaking and listening must be integrated into lessons, items, and tasks. These must reflect a progression of communication skills as outlined in the Standards.

Points Assigned for Alignment Criterion 6

Materials must earn at least 7 out of 10 points to meet Alignment Criterion 6. If materials earn less than 7 points, the Criterion has not been met. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Rating

☐ Meets
☐ Does Not Meet

Strengths / Weaknesses:

Before moving to Alignment Criterion 7, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 58.
Directions for Alignment Criterion 7
Access to the Standards for All Students

Alignment Criterion 7: Materials must provide thoughtful supports/scaffolds to support all students in accessing the CCSS.

Because the Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the same Standards. Thus, materials must provide supports for English Language Learners and other special populations.

Required Materials

• Teacher’s edition and student materials

• If the submission has formative assessments and supplemental support materials as separate documents, gather them prior to evaluating this critical Alignment Criterion.

Rating this Criterion

1. Rate how well the submission meets each of the Criteria below. Ratings are Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

2. Provide specific examples of evidence in support of the rating, including pointing out specific gaps in the materials.

3. When the section is finished, add up the rating and enter it at the bottom of the section. A rating of at least 8 out of 10 points means that the materials have met this Alignment Criterion.

4. Lastly, record the rating Meets, Does Not Meet or is Not Applicable for this section in the Evaluation Summary on page 58. The more points the materials receive on the Alignment Criteria, the better they are aligned.
Alignment Criterion 7
Access to the Standards for All Students

Metric

AC Metric 7A:
Do the materials regularly provide all students, including those who read, write, speak or listen below grade level, with extensive opportunities to work with and meet grade level Standards?

How to Find the Evidence

Examine the tasks and instructions in the sample chapters from throughout and across grades. Prefatory materials might also help you determine publisher attention to supporting all students.

Evidence

Rating

☐ Meets (2)
☐ Partially Meets (1)
☐ Does Not Meet (0)

IMET Evaluation Summary 1 of 2

Title of Submission: ____________________________  Name of Evaluator(s): ____________________________

Publisher: ____________________________  Date of Evaluation: ____________________________

Date of Publication: ____________________________  Signature of Each Evaluator(s): ____________________________

**Non-Negotiable Criteria**

Each Non-Negotiable must be met in order for the Non-Negotiable Alignment Criteria to be met overall.

**Non-Negotiable 1:** Complexity of Texts
- [ ] Meets
- [ ] Does Not Meet

**Non-Negotiable 2:** Text Dependence and Specific Questions
- [ ] Meets
- [ ] Does Not Meet

**Non-Negotiables Overall**
- [ ] Meets
- [ ] Does Not Meet

**Alignment Criteria**

Each Alignment Criterion must be met with a sufficient number of points in order for Alignment Criteria to be labeled as “Meets” overall. The more points the materials receive on the Alignment Criteria, the better they are aligned.

**Alignment Criterion 1:** Range and Quality of Texts
Points: ____ of 10 possible.
(Materials must receive at least 7 of 10 points to align.)
- [ ] Meets
- [ ] Does Not Meet
- [ ] N/A

**Alignment Criterion 2:** Questions and Tasks
Points: ____ of 6 possible.
(Materials must receive at least 4 of 6 points to align.)
- [ ] Meets
- [ ] Does Not Meet
- [ ] N/A

**Alignment Criterion 3:** Writing to Sources and Research
Points: ____ of 8 possible.
(Materials must receive at least 6 of 8 points to align.)
- [ ] Meets
- [ ] Does Not Meet
- [ ] N/A

**Alignment Criterion 4:** Foundational Skills
Points: ____ of 8 possible.
(Materials must receive at least 6 of 8 points to align.)
- [ ] Meets
- [ ] Does Not Meet
- [ ] N/A

**Alignment Criterion 5:** Language
Points: ____ of 6 possible.
(Materials must receive at least 4 of 6 points to align.)
- [ ] Meets
- [ ] Does Not Meet
- [ ] N/A

**Alignment Criterion 6:** Speaking and Listening
Points: ____ of 10 possible.
(Materials must receive at least 7 of 10 points to align.)
- [ ] Meets
- [ ] Does Not Meet
- [ ] N/A

**Alignment Criterion 7:** Access to the Standards for All Students
Points: ____ of 10 possible.
(Materials must receive at least 8 of 10 points to align.)
- [ ] Meets
- [ ] Does Not Meet
- [ ] N/A
Summary

If the materials meet both Non-Negotiables and relevant Alignment Criteria, they are aligned to the Shifts and major features of the CCSS.

Do the materials meet the Non-Negotiables and relevant Alignment Criteria?

☐ Yes
☐ No

What are the specific areas of strength and weakness based on this review?
Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.
## Indicators of Quality

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1 – 3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality is suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts.

### Indicators: Usefulness, Design, Focus

<table>
<thead>
<tr>
<th>Evidence</th>
<th>Rating (Y/N)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Do the student resources include ample easily implemented review and practice resources, clear directions and explanations, and correct labeling of reference aids (e.g., visuals, maps, etc.)?</td>
<td></td>
</tr>
<tr>
<td>2. Are the materials easy to use? Are they clearly laid out for students and teachers? Does every page of the submission add to student learning rather than distract from it? Are reading selections centrally located within the materials and obviously the center of focus?</td>
<td></td>
</tr>
<tr>
<td>3. Can the teacher and student reasonably complete the content presented within a regular school year and does the pacing of content allow for maximum student understanding? Do the materials provide clear guidance to teachers about the amount of time the lesson might reasonably take?</td>
<td></td>
</tr>
<tr>
<td>4. Do instructions allow for careful reading and rereading of content?</td>
<td></td>
</tr>
<tr>
<td>5. Do the materials contain clear statements and explanation of purpose, goals, and expected outcomes?</td>
<td></td>
</tr>
</tbody>
</table>
Instructional Materials Evaluation Toolkit (IMET)

ELA/Literacy, Grades 3–12
Instructional Materials Evaluation Tool
ELA/Literacy, Grades 3-12

What Are the Purposes of the IMET?

This ELA/Literacy IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-english-language-arts/) at the heart of the Common Core State Standards are:

- **Complexity**: Regular practice with complex text and its academic language
- **Evidence**: Reading, writing, and speaking grounded in evidence from text, both literary and informational
- **Knowledge**: Building knowledge through content-rich non-fiction.

The IMET draws directly from the following documents:

- Common Core State Standards for English Language Arts & Literacy in History/Social Studies, Science, and Technical Subjects (http://www.corestandards.org/ELA-Literacy/)
- Publishers’ Criteria for the Common Core State Standards in ELA/literacy grades 3-12 (http://corestandards.org/assets/Publishers_Criteria_for_3-12.pdf)
- Supplement to Appendix A of the Common Core State Standards for ELA/Literacy: New Research on Text Complexity (http://www.corestandards.org/assets/E0813_Appendix_A_New_Research_on_Text_Complexity.pdf)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students’ actual learning experiences approach the complexity, evidence, and knowledge building of the Standards.

3. Developing materials: Those developing new materials locally can use this tool as guidance for creating aligned ELA/Literacy curricula.

Please note this tool was designed to evaluate comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (http://www.corestandards.org/ELA-Literacy/) for all grades in which materials are being evaluated. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-english-language-arts/) of Complexity, Evidence, and Knowledge that are listed above.
Getting Started

Prior to Evaluation
Assemble all of the materials necessary for the evaluation. In addition, each evaluator should have a reference copy of the Common Core State Standards for ELA/Literacy and the Publishers’ Criteria for the Common Core State Standards in ELA/Literacy grades 3-12.

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers’ Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process.

Sections 1–3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria (p. 64)
- The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.
- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metrics.
- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria (p. 72)
- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.
- Examine the materials in relation to these criteria, assigning each metric a point value. Rate each criterion as “Meets” or “Does Not Meet” based on the number of points assigned. The more points the materials receive on the Alignment Criteria, the better they are aligned.
- Record and explain the evidence upon which the rating is based.

Complete Section 3: Evaluation Summary (p. 115)
- Compile all of the results from Sections 1 and 2 to determine if the instructional materials are aligned to the Shifts and major features of the CCSS.

Proceed to Section 4: Indicators of Quality (p. 117)
- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not for alignment to the CCSS, but they provide valuable information about additional curricula characteristics. Evaluators may want to add their own indicators to the examples provided.
Directions for Non-Negotiable 1

Complexity of Texts

Non-Negotiable 1: ELA/literacy texts have the appropriate level of complexity for the grade, according to both quantitative measures and qualitative analysis of text complexity — texts are worthy of student time and attention.

Required Materials

- Teacher's edition and student materials
- Appendix A pages 1-10 for more on the vital role text complexity plays in the CCSS (http://www.corestandards.org/assets/Appendix_A.pdf)
- Supplement to Appendix A: New Research on Text Complexity (http://www.corestandards.org/assets/E0813_Appendix_A_New_Research_on_Text_Complexity.pdf)

Rating this Criterion

Non-Negotiable Alignment Criteria are defined as the set of criteria that must be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each metric of a Non-Negotiable Alignment Criterion must be met in order for the criterion to be met.

1. Evaluate carefully how completely the submission meets each of the metrics for this Criterion below.

2. Provide specific examples of evidence in support of the rating, including pointing out specific gaps in the materials.

3. When the section is finished, if any one of the metrics is rated as Does Not Meet, then rate the overall Non-Negotiable 1 as Does Not Meet. If all metrics are rated as Meets, then rate the overall Non-Negotiable 1 as Meets.
### NN Metric 1A:
100% of texts must be accompanied by specific evidence that they have been analyzed with at least one research-based quantitative measure for grade band placement.

#### How to Find the Evidence
- Look for a publisher-supplied list of all texts in the submission with their quantitative measures.
- District conducts evaluation of all texts in the submission.
- Other evidence that texts have been measured by a quantitative measure.

#### Evidence

<table>

Non-Negotiable 1
Complexity of Texts

Metric

NN Metric 1B:
100% of texts must be accompanied by specific evidence that they have been analyzed for their qualitative features indicating a specific grade level placement.

How to Find the Evidence

Look for a publisher-supplied list of all texts in the submission with their qualitative measures.

District conducts evaluation of all texts in the submission.

Look for other evidence that texts have been qualitatively analyzed.

Evidence

Rating

☐ Meets
☐ Does Not Meet / Insufficient Evidence
Non-Negotiable 1
Complexity of Texts

Non-Negotiable 1: Texts are worthy of student time and attention; they have the appropriate level of complexity for the grade, according to both quantitative and qualitative analyses of text complexity.

Rating for Non-Negotiable 1

If both metrics were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 115.
Directions for Non-Negotiable 2
Text-Dependent and Text-Specific Questions

Non-Negotiable 2: At least 80% of all questions in the submission are high-quality text-dependent and text-specific questions. The overwhelming majority of these questions are text-specific and draw student attention to the text.

Required Materials

- Teacher’s edition and student materials
- Appropriate grade level set of ELA/Literacy Standards
- Tools for evaluating the quality of text dependent questions (http://achievethecore.org/page/710/text-dependent-question-resources)

Rating this Criterion

Non-Negotiable Alignment Criteria are defined as the set of criteria that must be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each metric of a Non-Negotiable Alignment Criterion must be met in order for the criterion to be met.

1. Evaluate carefully how completely the submission meets each of the metrics for this Criterion below.

2. Provide specific examples of evidence in support of the rating, including pointing out specific gaps in the materials.

3. When the section is finished, if any one of the metrics is rated as Does Not Meet, then rate the overall Non-Negotiable 2 as Does Not Meet. If all metrics are rated as Meets, then rate the overall Non-Negotiable 2 as Meets.
Non-Negotiable 2
Text-Dependent and Text-Specific Questions

Metric

NN Metric 2A:
At least eighty percent of all questions and tasks should be text dependent to reflect the requirements of Reading Standard 1 (by requiring use of textual evidence to support valid inferences from the text).

How to Find the Evidence

Analyze a large* sample set of questions from across the submission, including culminating tasks and extended response tasks, and evaluate them for text dependency/text specificity and requiring readers to produce evidence.

*Recommendation: analyze one in every four sets of questions and tasks completely to get a valid sample size.

Evidence

Non-Negotiable 2: At least 80% of all questions in the submission are high-quality text-dependent and text-specific questions. The overwhelming majority of these questions are text-specific and draw student attention to the text.

Rating for Non-Negotiable 2

If both metrics were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more metrics were rated as Does Not Meet, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Rating

☐ Meets
☐ Does Not Meet

Strengths / Weaknesses:

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 115.

Now continue by evaluating the Alignment Criterion 1 for Range and Quality of Texts
Directions for Alignment Criterion 1
Range and Quality of Texts

Alignment Criterion 1: Materials reflect the distribution of text types and genres required by the Standards.

Required Materials

- Teacher's edition and student materials
- Appropriate grade level set of ELA/Literacy Standards

Rating this Criterion

1. Rate how well the submission meets each of the criteria below. Ratings are Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

2. Provide specific examples of evidence in support of the rating, including pointing out specific gaps in the materials.

3. When the section is finished, add up the rating and enter it at the bottom of the section. A rating of 7 out of 10 points means that the materials have met this Alignment Criterion.

4. Lastly, record the rating Meets, Does Not Meet or Not Applicable for this section in the Evaluation Summary on page 115 before proceeding to Alignment Criterion 2. The more points the materials receive on the Alignment Criteria, the better they are aligned.

Alignment Criterion 1
Range and Quality of Texts

Alignment Criterion 1: Materials reflect the distribution of text types and genres required by the Standards.

Points Assigned for Alignment Criterion 1

Materials must earn at least 7 out of 10 points to meet Alignment Criterion 1. If materials earn less than 7 points, the Criterion has not been met. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Rating

☐ Meets
☐ Does Not Meet

Strengths / Weaknesses:

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 115.
Directions for Alignment Criterion 2
Questions and Tasks

Alignment Criterion 2: They support students in building reading comprehension, in finding and producing the textual evidence to support their responses, and in developing grade level academic language.

Required Materials

- Teacher’s edition and student materials
- Appropriate grade level set of ELA/Literacy Standards
- Tools for evaluating the quality of text dependent questions (http://achievethecore.org/page/710/text-dependent-question-resources)

Rating this Criterion

1. Rate how well the submission meets each of the Criteria below. Ratings are Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

2. Provide specific examples of evidence in support of the rating, including pointing out specific gaps in the materials.

3. When the section is finished, add up the rating and enter it at the bottom of the section. A rating of 4 out of 6 points means that the materials have met this Alignment Criterion.

4. Lastly, record the rating Meets, Does Not Meet or Not Applicable for this section in the Evaluation Summary on page 115 before proceeding to Alignment Criterion 3. The more points the materials receive on the Alignment Criteria, the better they are aligned.
### Metric

**AC Metric 2A:**
High-quality sequences of text-dependent questions are prevalent and can address any of the following: sustained attention to making meaning from the text, rereading to gain evidence and clarity, and the acquisition of foundational skills.

### How to Find the Evidence

Analyze a large* sample of questions from different grade levels/sections of the program.

*Recommendation: analyze one in every four sets of questions and tasks completely to get a valid sample size.

Alignment Criterion 2: They support students in building reading comprehension, in finding and producing the textual evidence to support their responses, and in developing grade level academic language.

Points Assigned for Alignment Criterion 2

Materials must earn at least 4 out of 6 points to meet Alignment Criterion 2. If materials earn less than 4 points, the Criterion has not been met. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Rating

___ Total (6 points possible)

☐ Meets

☐ Does Not Meet

Strengths / Weaknesses:

Before moving to Alignment Criterion 3, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 115.
Directions for Alignment Criterion 3
Writing to Sources and Research

Alignment Criterion 3: Written and oral tasks at all grade levels require students to confront the text directly, to draw on textual evidence, and to support valid inferences from the text.

Required Materials

• Teacher's edition and student materials
• Appropriate grade level set of ELA/Literacy Standards

Rating this Criterion

1. Rate how well the submission meets each of the Criteria below. Ratings are Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

2. Provide specific examples of evidence in support of the rating, including pointing out specific gaps in the materials.

3. When the section is finished, add up the rating and enter it at the bottom of the section. A rating of 6 out of 8 points means that the materials have met this Alignment Criterion.

4. Lastly, record the rating Meets, Does Not Meet or Not Applicable for this section in the Evaluation on page 115 before Proceeding to Alignment Criterion 4. The more points the materials receive on the Alignment Criteria, the better they are aligned.
Alignment Criterion 3
Writing to Sources and Research

Metric
AC Metric 3A:
Writing to sources is a key task. Students are asked in their writing to analyze and synthesize sources, as well as to present careful analysis, well-defended claims, and clear information.

How to Find the Evidence
Examine a sampling (minimum 8 per grade) of the writing tasks for each section, listing any tasks or items that do not require writing to sources. Calculate a percentage of aligned tasks. For alignment, three-quarters of tasks should require writing to sources.

Points Assigned for Alignment Criterion 3

Materials must earn at least 6 out of 8 points to meet Alignment Criterion 3. If materials earn less than 6 points, the Criterion has not been met. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Rating

Total (8 points possible)

☐ Meets

☐ Does Not Meet

Strengths / Weaknesses:

Before moving to Alignment Criterion 4, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 115.
**Directions for Alignment Criterion 4**

**Foundational Skills**

Alignment Criterion 4: Materials provide explicit and systematic instruction and diagnostic support in phonics, vocabulary, development, syntax, and fluency. These foundational skills are necessary and central components of an effective, comprehensive reading program designed to develop proficient readers with the capacity to comprehend texts across a range of types and disciplines.

This Criterion should be used for Grades 3-5 submissions only.

**Required Materials**

- Teacher's edition and student materials

- Refer to the grade-level specific Reading Standards for Foundations Skills (http://www.corestandards.org/ELA-Literacy/RF/introduction/)

**Rating this Criterion**

1. Rate how well the submission meets each of the Criteria below. Ratings are Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

2. Provide specific examples of evidence in support of the rating, including pointing out specific gaps in the materials.

3. When the section is finished, add up the rating and enter it at the bottom of the section. A rating of 6 out of 8 points means that the materials have met this Alignment Criterion.

4. Lastly, record the rating Meets, Does Not Meet or Not Applicable for this section in the summary sheet on page 115 before going on. The more points the materials receive on the Alignment Criteria, the better they are aligned.
Alignment Criterion 4
Foundational Skills

<table>
<thead>
<tr>

Rating

☐ Meets
☐ Does Not Meet

Strengths / Weaknesses:

Before moving to Alignment Criterion 7, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 115.
Directions for Alignment Criterion 7
Access to the Standards for All Students

Alignment Criterion 7: Materials must provide thoughtful supports/scaffolds to support all students in accessing the CCSS.

Because the Standards are for all students, alignment requires thoughtful support to ensure all students are able to meet the same Standards. Thus, materials must provide supports for English Language Learners and other special populations.

Required Materials

• Teacher’s edition and student materials

• Appropriate grade level set of ELA/Literacy Standards

• If the submission has formative assessments and supplemental support materials as separate documents, gather them prior to evaluating this critical Alignment Criterion.

Rating this Criterion

1. Rate how well the submission meets each of the Criteria below. Ratings are Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points).

2. Provide specific examples of evidence in support of the rating, including pointing out specific gaps in the materials.

3. When the section is finished, add up the rating and enter it at the bottom of the section. A rating of 8 out of 10 points means that the materials have met this Alignment Criterion.

4. Lastly, record the rating Meets, Does Not Meet or Not Applicable for this section in the Evaluation Summary on page 115 before proceeding further. The more points the materials receive on the Alignment Criteria, the better they are aligned.
Alignment Criterion 7
Access to the Standards for All Students

Metric

AC Metric 7A:
Do the materials regularly provide all students, including those who read, write, speak, or listen below grade level, with extensive opportunities to work with and meet grade level Standards?

How to Find the Evidence

Examine the tasks and instructions in the sample chapters from throughout and across grades. Prefatory materials might also help you determine publisher attention to supporting all students.

IMET Evaluation Summary 2 of 2

SECTION 2
Instructional Materials Evaluation Toolkit (IMET)
ELA/Literacy, Grades 3–12

Title of Submission: ________________________________

Publisher: ________________________________

Date of Publication: ________________________________

Name of Evaluator(s): ________________________________

Date of Evaluation: ________________________________

Signature of Each Evaluator(s): ________________________________

Summary

If the materials meet both Non-Negotiables and relevant Alignment Criteria, they are aligned to the Shifts and major features of the CCSS.

Do the materials meet both Non-Negotiables and the relevant Alignment Criteria?

☐ Yes
☐ No

What are the specific areas of strength and weakness based on this evaluation?
Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.
## Indicators of Superior Quality

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts, and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts.

<table>
<thead>
<tr>
<th>Indicators: Usefulness, Design, Focus</th>
<th>Evidence</th>
<th>Rating (Y/N)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Do the student resources include ample review and practice resources, clear directions and explanations, and correct labeling of reference aids (e.g., visuals, maps, etc.)?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2. Are the materials easy to use? Are they clearly laid out for students and teachers? Does every page of the submission add to student learning rather than distract from it? Are reading selections centrally located within the materials and obviously the center of focus?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3. Can the teacher and student reasonably complete the content presented within a regular school year and does the pacing of content allow for maximum student understanding? Do the materials provide clear guidance to teachers about the amount of time the lesson might reasonably take?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>4. Do instructions allow for careful reading and rereading of content?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>5. Do the materials contain clear statements and explanation of purpose, goals, and expected outcomes?</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Instructional Materials Evaluation Toolkit (IMET)

Mathematics, Grades K–8
Instructional Materials Evaluation Tool
Mathematics, Grades K-8

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus**: strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- **Common Core State Standards for Mathematics** (www.corestandards.org/Math)

**When to use the IMET**

1. **Purchasing materials**: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. **Evaluating materials currently in use**: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students’ actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. **Developing programs**: Those developing new programs can use this tool as guidance for creating aligned curricula.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore/focus), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.
Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers’ Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers’ Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1–3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria (p. 121)

• The Non-Negotiable Alignment Criteria must each be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

• Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

• Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria (p. 134)

• The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

• Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as “Meets” or “Does Not Meet” based on the number of points assigned. The more points the materials receive on the Alignment Criteria, the better they are aligned.

• Record and explain the evidence upon which the rating is based.

Complete Section 3: Evaluation Summary (p. 154)

• Compile all of the results from Sections 1 and 2 to determine if the instructional materials are aligned to the Shifts and major features of the CCSS.

Proceed to Section 4: Indicators of Quality (p. 156)

• Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.
Directions for Non-Negotiable 1
Freedom from Obstacles to Focus

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.

The Standards foster students’ progress to algebra by focusing strongly on arithmetic. Consistent with this focus, certain topics from outside of arithmetic appear only in later grades. Thus, to be aligned, materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.

Required Materials

• Common Core State Standards for Mathematics
  (www.corestandards.org/wp-content/uploads/Math_Standards.pdf)

• From the materials being evaluated: teacher guides and all assessment components

Rating this Criterion

Non-Negotiable 1 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 1, begin by rating Metric 1A. Since Metric 1A is the only metric for Non-Negotiable 1, the rating for Non-Negotiable 1 is the same as the rating for Metric 1A.

If Metric 1A is rated as Does Not Meet, include evidence of when the named topic(s) is/are assessed. If the metric is rated as Meets, list the grade(s) examined in the evaluation.

Non-Negotiable 1
Freedom from Obstacles to Focus

Non-Negotiable 1: Materials must reflect the content architecture of the Standards by not assessing the topics named before the grade level where they first appear in the Standards.

Rating for Non-Negotiable 1

If Metric 1A was rated as Meets, then rate Non-Negotiable 1 as Meets. If Metric 1A was rated as Does Not Meet, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.

Rating

☐ Meets
☐ Does Not Meet

Strengths / Weaknesses:

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 154.
Directions for Non-Negotiable 2
Focus and Coherence

Non-Negotiable 2: Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In simpler terms, a mile-wide, inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students. Thus, materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Required Materials

- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)
- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Non-Negotiable 2 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 2, first rate metrics 2A–2H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 2 to be rated as Meets. Rate each metric 2A-2H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.
### Metric

**NN Metric 2A:**
In each grade K–8, students and teachers using the materials as designed devote the large majority of time to the Major Work of the grade.

### How to Find the Evidence

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Major Work of the grade and judge qualitatively whether students and teachers using the materials as designed will devote the large majority of time to the Major Work of the grade.

For context, read Criterion #1 in the Publishers’ Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

</thead>
<tbody>
<tr>
<td><strong>NN Metric 2B:</strong> Supporting Work, where present, enhances focus and coherence simultaneously by also engaging students in the Major Work of the grade.</td>
<td>Familiarize yourself with the Major Work and Supporting Work of the grade being evaluated (see the Focus by Grade Level documents.) Evaluate chapters and lessons that focus on Supporting Work. NOTE: Example of evaluating this Criterion might include looking at whether materials for K–5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (e.g., see 3.MD.B.3); or whether materials for grade 7 take advantage of opportunities to use probability to support ratios, proportions, and percentages. For context, read Criterion #3 in the Publishers' Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).</td>
<td></td>
</tr>
</tbody>
</table>

### Rating

- [ ] Meets
- [ ] Does Not Meet / Insufficient Evidence
Non-Negotiable 2
Focus and Coherence

**Metric**

**NN Metric 2C:**
Materials base content progressions on the grade-by-grade progressions in the Standards. Content from previous or future grades does not unduly interfere with or displace on-grade-level content.

**How to Find the Evidence**

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, and lessons in both student and teacher materials. NOTE: In some cases it may be possible that aligned materials might address some aspects of a topic in a strategic way before or after the grade level in which the topic is central in the Standards’ progressions; for example, a curriculum author might purposefully choose to explore adding fractions with unlike denominators in a way appropriate to grade four, recognizing that this work is not really required until the next grade. However, any such purposeful discrepancies in content progressions should enhance the required learning in each grade; not unduly interfere with or displace grade-level content; and be clearly aimed at helping students meet the Standards as written rather than effectively rewriting the progressions in the Standards. And in all cases, note that Non-Negotiable 1 must be met for materials to be aligned.

For context, read Criterion #5a in the Publishers’ Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

**Evidence**

## Non-Negotiable 2

Focus and Coherence

### Metric

| NN Metric 2D: | Materials give all students extensive work with on-grade-level problems. |

### How to Find the Evidence

Evaluate both student and teacher materials.

If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with grade-level problems. Also consider whether higher-performing students are given opportunities to learn current grade-level content in greater depth.

### Evidence

<table>
<thead>
<tr>
<th>Rating</th>
<th>Meets</th>
<th>Does Not Meet / Insufficient Evidence</th>
</tr>
</thead>
</table>
### Metric

**NN Metric 2E:** Materials relate on-grade-level concepts explicitly to prior knowledge from earlier grades.

### How to Find the Evidence

Evaluate both student and teacher materials. NOTE: Examples of evaluating this Criterion might include looking at the way the materials extend basic ideas of place value across the decimal point; or the role that properties of operations play when the materials extend arithmetic beyond whole numbers to fractions, variables, and expressions. More generally, cluster headings in the Standards sometimes signal key moments where reorganizing and extending previous knowledge is important in order to accommodate new knowledge (e.g., see cluster headings that use the phrase “Apply and extend previous understanding”).

For context, read Criterion #5c in the Publishers’ Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

### Evidence

<table>
<thead>
<tr>
<th>Rating</th>

</thead>
<tbody>
<tr>
<td>□ Meets</td>
<td></td>
</tr>
<tr>
<td>□ Does Not Meet / Insufficient Evidence</td>
<td></td>
</tr>
</tbody>
</table>
## Non-Negotiable 2
Focus and Coherence

### Metric

**NN Metric 2F:**
Review of material from previous grades is clearly identified as such to the teacher, and teacher and students can see what their specific responsibility is for the current year.

### How to Find the Evidence

Evaluate the table of contents, but do not stop there; also evaluate units, chapters, lessons, homework assignments and assessments. (Evaluate both student and teacher materials.) Identify any content from previous grades and check whether it is identified as such.

### Evidence

<table>

Reviewer Initials: ___________  Title of Program: ___________________________________________
Non-Negotiable 2
Focus and Coherence

**Metric**

**NN Metric 2G:**
Materials include learning objectives that are visibly shaped by CCSSM cluster headings.

**How to Find the Evidence**

Select several clusters from the Major Work in the grade being evaluated. Evaluate teacher and student materials in relation to these clusters.

For context, read Criterion #6a in the Publishers’ Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

**Rating**

☐ Meets
☐ Does Not Meet / Insufficient Evidence
NN Metric 2H:
Materials include problems and activities that serve to connect two or more clusters in a domain, or two or more domains in a grade, in cases where these connections are natural and important.

How to Find the Evidence

In the grade being evaluated, choose two or more clusters or two or more domains for which connections are natural and important.

Evaluate the units, chapters, and lessons that deal with the chosen topics, looking for problems and activities that serve to connect the chosen clusters or domains. NOTE: An example of evaluating this Criterion might include looking at whether problems in grade 4 sometimes or often involve students applying their developing computation skills (detailed in domain NBT) in the context of solving word problems (detailed in domain OA).

For context, read Criterion #6b in the Publishers’ Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Evidence

Rating

☐ Meets

☐ Does Not Meet / Insufficient Evidence
Non-Negotiable 2
Focus and Coherence

Non-Negotiable 2: Materials must focus coherently on the Major Work of the grade in a way that is consistent with the progressions in the Standards.

Rating for Non-Negotiable 2

If all Metrics 2A – 2H were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more Metric was rated Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.

Strengths / Weaknesses:

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 154.

Now continue by evaluating the Alignment Criterion 1 for Rigor and Balance
Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards’ rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards’ rigorous expectations.

Required Materials

- Focus by Grade Level for the grade being evaluated (achievethecore.org/focus)

- Situation Types for the Operations in Word Problems (achievethecore.org/situation-types)

- From the materials being evaluated: teacher guides, student texts and workbooks

• Choose a cluster/Standard from the Major Work that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters/Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in “How to Find the Evidence” below.)

Rating this Criterion

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Alignment Criterion 1
Rigor and Balance

Use the questions on this page to evaluate Metric 1A. On page 136, record evidence for each question and rate Metric 1A.

## Metric

AC Metric 1A:
The materials support the development of students’ conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

## How to Find the Evidence

Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically conceptual understanding to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for conceptual understanding include: K.OA.A.1, (1.NBT.B, 1.NBT.C), (2.NBT.A, 2.NBT.B), (3.OA.A.1, 3.OA.A.2), 4.NFA, (4.NBT.A, 4.NBT.B), 5.NFB, (5.NBT.A, 5.NBT.B), 6.RPA, 6.EE.A.3, 7.NS.A, 7.EE.A, 8.EE.B, 8.FA, 8.G.A

Clusters or Standards grouped by parentheses are closely connected and could be analyzed together.

## Questions for Metric

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting. NOTE: Examples of evaluating this Criterion might include looking at how well the multi-digit addition and subtraction algorithms are developed and explained on the basis of place value and properties of operations; or how well the multi-digit multiplication and division algorithms are developed and explained on the basis of place value and properties of operations; or how well solving equations is presented and explained as a process of reasoning.

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Example of conceptual problems might include such questions as “Find a number greater than ½ and less than ¼,” or “If the divisor does not change and the dividend increases, what happens to the quotient?”

Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at whether students are supported in identifying correspondences among: the verbal description of a situation, the diagrams that distill its mathematical features, and the equations that model it; or equivalent forms of numbers (e.g., 3 and ⅗) and the number line; or rational number operations and representations of them via models such as the vector model; or the expression that defines a function and the graph that shows the relationship.
## Alignment Criterion 1

**Rigor and Balance**

### Metric

**AC Metric 1A:**
The materials support the development of students’ conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

### Evidence

- **Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting?**

- **Do the materials feature high-quality conceptual problems and conceptual discussion questions?**

- **Do the materials feature opportunities to identify correspondences across mathematical representations?**

### Rating

- [ ] Meets (2)
- [ ] Partially Meets (1)
- [ ] Does Not Meet (0)
Use the questions on this page to evaluate Metric 1B. On page 138, record evidence for each question and rate Metric 1B.

**AC Metric 1B:**
The materials are designed so that students attain the fluencies and procedural skills required by the Standards.

**How to Find the Evidence**
Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically to fluency and procedural skill to use throughout the questions associated with this metric. NOTE: Some examples of Standards that call for procedural skill and fluency include: K.OA.A.5, 1.OA.C.6, 2.OA.B.2, 2.NBT.B.5, 3.OA.C.7, 3.NBT.A.2, 4.OA.C.3, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2, and 6.NS.B.3, 6.EE.A, 7.NS.A, 7.EE.A, 17.EE.B.4a, 8.EE.C.7, 8.EE.C.8b

**Questions for Metric**
Is progress toward fluency and procedural skill interwoven with students’ developing conceptual understanding of the operations in question? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments for evidence that the development of fluency and procedural skill is supported by conceptual understanding.

Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present? Evaluate lessons, chapter/unit assessments, daily routines, and homework assignments. NOTE: Examples of problems in which opportunistic strategies are valuable might include the sum 698 + 240 or the system x + y = 1, 2x + 2y = 3. Examples of generic cases that require efficient algorithms might include the sum 8767+2286 or the system 6y + x = 1 + 2y.

Alignment Criterion 1
Rigor and Balance

Metric

AC Metric 1B:
The materials are designed so that students attain the fluencies and procedural skills required by the Standards.

Evidence

Is progress toward fluency and procedural skill interwoven with students' developing conceptual understanding of the operations in question?

Are purely procedural problems and exercises present that include cases in which opportunistic strategies are valuable and generic cases that require efficient algorithms present?

Do the materials in grades K–6 provide repeated practice toward attainment of fluency Standards?

Rating

☐ Meets (2)
☐ Partially Meets (1)
☐ Does Not Meet (0)
Alignment Criterion 1
Rigor and Balance

Use the questions on this page to evaluate Metric 1C. On page 140, record evidence for each question and rate Metric 1C.

Metric

AC Metric 1C:
The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.

How to Find the Evidence
Select one or more cluster(s) or Standard(s) from the Major Work for the grade being evaluated that relate specifically application to use throughout the questions associated with this metric. NOTE: Some examples of clusters or Standards that call for application include: K.OA.A.2, 1.OA.A, 2.OA.A, 3.OA.A.3, 3.OA.D.8, 4.OA.A.3, 4.NF.B.3d, 4.NF.B.4c, 5.NF.B.6, 5.NF.B.7c, 6.RP.A.3, 6.NS.A.1, 6.EE.B.7, 6.EE.C.9, 7.RP.A, 7.NS.A.3, 7.EE.B.3, 8.EE.C.8c, 8.FB

For context, read Criterion #4c in the Publishers’ Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Questions for Metric

Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit? Evaluate lessons, chapter/unit assessments, and homework assignments.

Do application problems particularly stress applying the Major Work of the grade? Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE: Examples of evaluating this Criterion might include looking at: how well, by the end of grade 2, students using the materials as designed can represent and solve a full range of one-step addition and subtraction word problems; or how well, by the end of grade 3, students using the materials as designed can represent and solve a full range of one-step multiplication and division word problems; or how well these basic situation types for each operation are carried coherently across the grades, (e.g., with fractions and algebraic expressions); or, in all grades, whether the problems connect concepts, Standards, and domains in ways that are natural and important. For a list of situation types for one-step addition, subtraction, multiplication, and division problems, see Situation Types for the Operations in Word Problems.

Does modeling build slowly across K–8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6–8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically? Read Standard for Mathematical Practice 4, Model with Mathematics. Evaluate lessons, chapter/unit assessments, and homework assignments.
### Metric

**AC Metric 1C:**
The materials are designed so that teachers and students spend sufficient time working with engaging applications, without losing focus on the Major Work of each grade.

### Evidence

Are there single- and multi-step contextual problems, including non-routine problems, that develop the mathematics of the grade, afford opportunities for practice, and engage students in problem solving? Do the problems attend thoroughly to those places in the content Standards where expectations for multi-step and real-world problems are explicit?

Do application problems particularly stress applying the Major Work of the grade?

Does modeling build slowly across K-8, with applications that are relatively simple in earlier grades and when students are encountering new content? In grades 6-8, do the problems begin to provide opportunities for students to make their own assumptions or simplifications in order to model a situation mathematically?

### Rating

- [ ] Meets (2)
- [ ] Partially Meets (1)
- [ ] Does Not Meet (0)
Alignment Criterion 1
Rigor and Balance

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards’ rigorous expectations.

Points Assigned for Alignment Criterion 1

Materials must earn at least 5 out of 6 points to meet this Alignment Criterion. If materials earn less than 5 out of 6 points, the Criterion has not been met. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.

Before moving to Alignment Criterion 2, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 154.
Directions for Alignment Criterion 2
Standards for Mathematical Practice

Alignment Criterion 2: Materials must demonstrate authentic connections between content Standards and practice Standards.

The Standards require that designers of instructional materials connect the mathematical practices to mathematical content in instruction. Thus, materials must demonstrate authentic connections between content Standards and practice Standards.

Required Materials

- Focus by Grade Level for the grade being evaluated (www.achievethecore.org/focus)

- From the materials being evaluated: teacher guides, student texts and workbooks

Rating this Criterion

Alignment Criterion 2 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 2, first rate metrics 2A, 2B, and 2C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 2 if the materials earn 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as mathematical practices, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Alignment Criterion 2
Standards for Mathematical Practice

Metric

AC Metric 2A:
Materials address the practice Standards in such a way as to enrich the Major Work of the grade; practices strengthen the focus on Major Work instead of detracting from it, in both teacher and student materials.

How to Find the Evidence

Familiarize yourself with the Major Work of the grade being evaluated (see the Focus by Grade Level documents.)

Evaluate teacher and student materials for evidence that the mathematical practices support and connect to the focus of the grade. NOTE: Examples of evaluating this Criterion might include looking at whether, in grades K–5, students using the materials are supported to look for and express regularity in repeated reasoning about the addition table, the multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; or whether, in grades 6–8, students using the materials are supported to look for and express regularity in repeated reasoning about proportional relationships and linear functions.

IMET Evaluation Summary 2 of 2

Program: ____________________________  Name of Evaluator (s): ____________________________

Publisher: ___________________________  Date of Evaluation: ____________________________

Date of Publication: ____________________  Signature of Each Evaluator (s): ____________________________

Summary

If the materials meet both Non-Negotiables and relevant Alignment Criterion, they are aligned to the Shifts and major features of the CCSS.

Do the materials meet every Non-Negotiable and Alignment Criterion?

☐ Yes
☐ No

What are the specific areas of strength and weakness based on this evaluation?

Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.
### Indicators of Quality

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.18–21 in the Publishers’ Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

<table>
<thead>
<tr>
<th>Indicators</th>
<th>Evidence</th>
<th>Rating (Y/N)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2. The underlying design of the materials includes both problems and exercises. (In solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery.) Each problem or exercise has a purpose. NOTE: This Criterion does not require that the problems and exercises be labeled as such.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3. Design of assignments is not haphazard: exercises are given in intentional sequences in order to strengthen students’ mathematical understanding.</td>
<td></td>
<td></td>
</tr>
</tbody>

Instructional Materials Evaluation Toolkit (IMET)

Mathematics, High School
Instructional Materials Evaluation Tool
Mathematics, High School

What Are the Purposes of the IMET?

This Math IMET is designed to help educators determine whether instructional materials are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards are:

- **Focus**: strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The IMET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)

When to use the IMET

1. Purchasing materials: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of instructional materials to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the materials evaluation and purchasing process.

2. Evaluating materials currently in use: The IMET can be used to analyze the degree of alignment of existing materials and help to highlight specific, concrete flaws in alignment. Even where materials and tools currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify or combine existing resources in such a way that students’ actual learning experiences approach the focus, coherence, and rigor of the Standards.

3. Developing programs: Those developing new programs can use this tool as guidance for creating aligned curricula.

Who Uses the IMET?

Evaluating instructional materials requires both subject-matter and pedagogical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which materials are being evaluated. This includes understanding the Widely Applicable Prerequisites (www.achievethecore.org/prerequisites), how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.

Please note this tool was designed for evaluating comprehensive curricula (including any supplemental or ancillary materials), but it was not designed for the evaluation of standalone supplemental materials.
Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation. It is essential for evaluators to have materials for all grades covered by the program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics (CCSSM) and the Publishers’ Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Before conducting the evaluation itself, it is important to develop a protocol for the evaluation process. The protocol should include having evaluators study the Publishers’ Criteria and the IMET. It will also be helpful for evaluators to get a sense of each program overall before beginning the process. At a minimum, this would include reading the front matter of the text, looking at the table of contents and paging through multiple chapters.

Sections 1–3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the materials under evaluation. Information about areas in need of improvement or supplementation should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria (p. 162)

- The Non-Negotiable Alignment Criterion must be met in full for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. The Non-Negotiable Alignment Criterion has metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

- Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metric(s).

- Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria (p. 172)

- The Alignment Criteria must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

- Examine the materials in relation to these criteria, assigning each metric a point value. Rate the criterion as “Meets” or “Does Not Meet” based on the number of points assigned. The more points the materials receive on the Alignment Criteria, the better they are aligned.

- Record and explain the evidence upon which the rating is based.

Complete Section 3: Evaluation Summary (p. 192)

- Compile all of the results from Sections 1 and 2 to determine if the instructional materials are aligned to the Shifts and major features of the CCSS.

Proceed to Section 4: Indicators of Quality (p. 194)

- Indicators of Quality are important considerations that will help evaluators better understand the overall quality of instructional materials. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics. Evaluators may want to add their own indicators to the examples provided.
Directions for Non-Negotiable 1
Focus and Coherence

Non-Negotiable 1: Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics (CCSSM, p. 3). Focus is necessary in order to fulfill the ambitious promise the states have made to their students by adopting the Standards: greater achievement at the college and career-ready level; greater depth of understanding of mathematics; and a rich classroom environment in which reasoning, sense-making, applications, and a range of mathematical practices flourish. In high school courses, narrowing and deepening the curriculum creates a structure that ties topics together. Thus, materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Rating this Criterion
Non-Negotiable 1 is rated as Meets or Does Not Meet.

To rate Non-Negotiable 1, first rate Metrics 1A–1H. Each of these eight metrics must be rated as Meets in order for Non-Negotiable 1 to be rated as Meets. Rate each metric 1A–1H as Meets or Does Not Meet/Insufficient Evidence. If the evidence examined shows that the Criterion is met, then mark the Criterion as Meets. If the evidence examined shows that the Criterion is not met—or if there is insufficient evidence to make a determination—then mark the Criterion as Does Not Meet/Insufficient Evidence. Support all ratings with evidence.

Required Materials

- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks
Non-Negotiable 1
Focus and Coherence

Metric

NN Metric 1A:
In any single course, students spend at least 50% of their time on Widely Applicable Prerequisites.

How to Find the Evidence

Familiarize yourself with the Widely Applicable Prerequisites.

Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials.)

Consider time spent on the Widely Applicable Prerequisites and judge qualitatively whether students and teachers using the materials as designed will devote the majority of time to the Widely Applicable Prerequisites.

For context, read Criterion #1 in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Evidence

Rating

☐ Meets
☐ Does Not Meet / Insufficient Evidence
Non-Negotiable 1
Focus and Coherence

Metric

NN Metric 1B:
Student work in Geometry involves significant work with applications/modeling and problems that use algebra skills.

How to Find the Evidence
Evaluate the table of contents and any pacing guides. Do not stop there; also evaluate units, chapters, lessons, homework assignments, and assessments. (Evaluate both student and teacher materials. NOTE: Since Geometry contains relatively fewer Widely Applicable Prerequisites, this Criterion is important to help foster students’ college and career readiness. Problems that use algebra skills might include, for example, algebraic geometry problems in a coordinate setting, or problems of measurement involving unknown quantities.

Evidence

Rating

☐ Meets
☐ Does Not Meet / Insufficient Evidence
Metric

NN Metric 1C:
There are problems at a level of sophistication appropriate to high school (beyond mere review of middle school topics) that involve the application of knowledge and skills from grades 6-8.

How to Find the Evidence

Evaluate lessons, chapter/unit assessments, and homework assignments. NOTE:
Problems should include application of the following topics from grades 6-8:

- Ratios and proportional relationships.
- Percentage and unit conversions, e.g., in the context of complex measurement problems involving quantities with derived or compound units (such as mg/mL, kg/m³, acre-feet, etc.).
- Basic function concepts, e.g., by interpreting the features of a graph in the context of an applied problem.
- Concepts and skills of geometric measurement e.g., when analyzing a diagram or schematic.
- Concepts and skills of basic statistics and probability (see grades 6–8.SP)
- Performing rational number arithmetic fluently.

For context, read Table 1 on Page 8 of the Publishers’ Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

- [ ] Meets
- [ ] Does Not Meet / Insufficient Evidence
Non-Negotiable 1
Focus and Coherence

Metric

NN Metric 1E:
Materials give all students extensive work with course-level problems.

How to Find the Evidence

Evaluate both student and teacher materials.

If the materials provide resources for differentiated learning, consider whether lower-performing students have opportunities to engage with course-level problems. Also consider whether higher-performing students are given opportunities to learn current course-level content in greater depth.

For context, read Criterion #3b in the Publishers’ Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Evidence

Rating

☐ Meets
☐ Does Not Meet / Insufficient Evidence
## Metric

**NN Metric 1F:**
Materials relate course-level concepts explicitly to prior knowledge from earlier grades or courses. The materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge.

## How to Find the Evidence

Evaluate student and teacher materials, looking for problems that involve extending the knowledge learned in earlier grades and courses. NOTE: An example of evaluating this Criterion might be to look at whether materials connect the equation of a circle with the distance formula and the Pythagorean theorem.

For context, read Criterion #3c in the Publishers’ Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Non-Negotiable 1: Materials must focus coherently on the Widely Applicable Prerequisites in a way that is consistent with the progressions in the Standards.

Rating for Non-Negotiable 1

If all metrics 1A–1H were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet/Insufficient Evidence, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of the above Criterion.

Strengths / Weaknesses:

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 192.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.
Directions for Alignment Criterion 1
Rigor and Balance

Alignment Criterion 1: Materials must reflect the balances in the Standards and help students meet the Standards’ rigorous expectations.

The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, materials must reflect the balances in the Standards and help students meet the Standards’ rigorous expectations.

Required Materials

- Widely Applicable Prerequisites for College and Careers (http://achievethecore.org/prerequisites)
- From the materials being evaluated: teacher guides, student texts and workbooks
- Choose a cluster/Standard from the Widely Applicable Prerequisites that is aligned to each aspect of rigor and use it to evaluate these metrics. It is most helpful if the same clusters and Standards are chosen for all of the programs being evaluated. (Guidance in choosing clusters/Standards is included in “How to Find the Evidence” below.)

Rating this Criterion

Alignment Criterion 1 is rated as Meets or Does Not Meet.

To rate Alignment Criterion 1, first rate metrics 1A, 1B, and 1C. Rate each metric as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). For each metric, guiding questions are provided to aid in gathering evidence.

Since there are three metrics, and each metric is worth up to 2 points, the maximum possible rating across all three metrics is 6 points. Ideally, aligned materials will earn all 6 points; materials are judged to have met Alignment Criterion 1 if the materials rate 5 or 6 points. This threshold recognizes that evaluators sometimes differ in how they assess features such as rigor and balance, while at the same time ensuring that no single metric can receive a rating of zero and be aligned to the Shifts and major features of the CCSSM.
Alignment Criterion 1
Rigor and Balance

Use the questions on this page to evaluate Metric 1A. On page 174, record evidence for each question and rate Metric 1A.

AC Metric 1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

How to Find the Evidence
Select one or more cluster(s) or Standard(s) from the Widely Applicable Prerequisites that relate specifically to conceptual understanding to use throughout the questions associated with this metric.

NOTE: Some examples of clusters or Standards that call for conceptual understanding include: N-RN.A.1, A-APR.B, A-REI.A.1, A-REI.D.10, A-REI.D.11, F.IF.A.1, F-LE.A.1, G.SRT.A.2, G-SRT.C.6, S-ID.C.7

For context, read Criterion #2a in the Publishers' Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Questions for Metric
Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting? Evaluate lessons, chapter/unit assessments and homework assignments, paying attention to work aligned to Standards that explicitly call for understanding or interpreting.

Do the materials feature high-quality conceptual problems and conceptual discussion questions? Evaluate lessons, chapter/unit assessments, and homework assignments.

NOTE: Examples of conceptual problems might include such questions as “What is the maximum value of the function f(t) = 5 – t²?” or “Is √2 a polynomial? How about ½(x + √2) + ½(-x + √2)?”

Do the materials feature opportunities to identify correspondences across mathematical representations? Evaluate lessons, chapter/unit assessments and homework assignments.

NOTE: An example of evaluating this metric might include looking at whether materials support students in identifying correspondences among the expression that defines a function, the graph that shows the relationship, and the behavior of the phenomenon being modeled (if any).
Alignment Criterion 1
Rigor and Balance

Metric

AC Metric 1A:
The materials support the development of students' conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

Evidence

Is conceptual understanding attended to thoroughly where the Standards set explicit expectations for understanding or interpreting?

Do the materials feature high-quality conceptual problems and conceptual discussion questions?

Do the materials feature opportunities to identify correspondences across mathematical representations?

Summary

If the materials meet the Non-Negotiable Criterion and each Alignment Criterion, they are aligned to the Shifts and major features of the CCSS.

Do the materials meet every Non-Negotiable and Alignment Criteria?

☐ Yes
☐ No

What are the specific areas of strength and weakness based on this evaluation?
Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.
Indicators of Quality

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it's important to evaluate for overall quality and best practices. A starting list of Indicators of Quality are suggested below. States, districts and others evaluating instructional materials are encouraged to add to this list to ensure materials reflect local contexts. For background information on some of the Indicators of Quality in this section, refer to pp.16–18 in the Publishers’ Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

<table>

Section 3

EQuIP
Student Work Protocol

199  Mathematics, Grades K–12
201  ELA/Literacy, Grades K–2
203  ELA/Literacy, Grades 3–5
203  ELA/Literacy, Grades 6–12
The ultimate goal of the Common Core State Standards (CCSS) is to prepare all students with the knowledge and skills they need for postsecondary success. The EQuIP Student Work Protocol is designed to establish or articulate the relationship between student work and the quality and alignment of instructional materials that previously have been reviewed using the EQuIP quality review process. Focusing on this relationship enables educators to develop a common understanding of the challenging work required by the CCSS. Furthermore, analyzing this relationship will also assist in closing the gap between what students are learning and the expectations embodied in assignments, as well as verifying what students are being taught and what they have learned, remembered, and incorporated into their knowledge and skills. Common expectations will result in more equitable educational opportunities for students and deepen the existing foundation for collaboration among states and districts.

The specific objectives of this EQuIP Student Work Protocol are three-fold:

- To confirm that a lesson’s or unit’s assignment is aligned with the letter and spirit of the targeted Common Core State Standards.

- To determine how students performed on an assignment as evidence of how well designed the lesson/unit is.

- To provide criterion-based suggestions for improving the assignment and related instructional materials.

**a) Where to find online:**
To view and download the EQuIP Student Work Protocol and related training materials, please visit: www.achieve.org/equip

**b) Who uses:**
The EQuIP Student Work Protocol is designed for use by educators, instructional leaders and administrators.

**c) Target materials:**
The EQuIP Student Work Protocol is intended for use with instructional materials that have undergone an EQuIP review, received a rating of E or E/I, and then subsequently have been implemented in an instructional setting to produce samples of student work.

**d) How to use:**
This 5-step protocol begins with a team of reviewers (or a single reviewer) focusing on the assignment itself — the directions or prompt and any accompanying scoring guides. Reviewers identify the content and performances required by the assignment. Reviewers then analyze the standards actually targeted by the author of the lesson/unit and the content and performances they embody. Gaps in alignment are noted.

The process then turns to describing how students performed on the assignment and whether and how students demonstrated the expectations of the targeted standards. At the end of the review process, reviewers provide criterion-based feedback regarding improvements that could be made to both the assignment and related instructional materials.
### I. Alignment to the Depth of the CCSS

The lesson/unit aligns with the letter and spirit of the CCSS:
- Targets a set of grade-level CCSS mathematics standard(s) to the full depth of the standards for teaching and learning.
- Standards for Mathematical Practice that are central to the lesson are identified, handled in a grade-appropriate way, and well connected to the content being addressed.
- Presents a balance of mathematical procedures and deeper conceptual understanding inherent in the CCSS.

### II. Key Shifts in the CCSS

The lesson/unit reflects evidence of key shifts that are reflected in the CCSS:
- **Focus:** Lessons and units targeting the major work of the grade provide an especially in-depth treatment, with especially high expectations. Lessons and units targeting supporting work of the grade have visible connection to the major work of the grade and are sufficiently brief. Lessons and units do not hold students responsible for material from later grades.
- **Coherence:** The content develops through reasoning about the new concepts on the basis of previous understandings. Where appropriate, provides opportunities for students to connect knowledge and skills within or across clusters, domains and learning progressions.
- **Rigor:** Requires students to engage with and demonstrate challenging mathematics with appropriate balance among the following:
  - **Application:** Provides opportunities for students to independently apply mathematical concepts in real-world situations and solve challenging problems with persistence, choosing and applying an appropriate model or strategy to new situations.
  - **Conceptual Understanding:** Develops students’ conceptual understanding through tasks, brief problems, questions, multiple representations and opportunities for students to write and speak about their understanding.
  - **Procedural Skill and Fluency:** Expects, supports and provides guidelines for procedural skill and fluency with core calculations and mathematical procedures (when called for in the standards for the grade) to be performed quickly and accurately.

### III. Instructional Supports

The lesson/unit is responsive to varied student learning needs:
- Includes clear and sufficient guidance to support teaching and learning of the targeted standards, including, when appropriate, the use of technology and media.
- Uses and encourages precise and accurate mathematics, academic language, terminology and concrete or abstract representations (e.g., pictures, symbols, expressions, equations, graphics, models) in the discipline.
- Engages students in productive struggle through relevant, thought-provoking questions, problems and tasks that stimulate interest and elicit mathematical thinking.
- Addresses instructional expectations and is easy to understand and use.
- Provides appropriate level and type of scaffolding, differentiation, intervention and support for a broad range of learners.
  - Supports diverse cultural and linguistic backgrounds, interests and styles.
  - Provides extra supports for students working below grade level.
  - Provides extensions for students with high interest or working above grade level.

**A unit or longer lesson should:**
- Recommend and facilitate a mix of instructional approaches for a variety of learners such as using multiple representations (e.g., including models, using a range of questions, checking for understanding, flexible grouping, pair-share).
- Gradually remove supports, requiring students to demonstrate their mathematical understanding independently.
- Demonstrate an effective sequence and a progression of learning where the concepts or skills advance and deepen over time.
- Expect, support and provide guidelines for procedural skill and fluency with core calculations and mathematical procedures (when called for in the standards for the grade) to be performed quickly and accurately.

### IV. Assessment

The lesson/unit regularly assesses whether students are mastering standards-based content and skills:
- Is designed to elicit direct, observable evidence of the degree to which a student can independently demonstrate the targeted CCSS.
- Assesses student proficiency using methods that are accessible and unbiased, including the use of grade-level language in student prompts.
- Includes aligned rubrics, answer keys and scoring guidelines that provide sufficient guidance for interpreting student performance.

**A unit or longer lesson should:**
- Use varied modes of curriculum-embedded assessments that may include pre-, formative, summative and self-assessment measures.
**EQuIP Rubric for Lessons & Units: Mathematics**

**Directions:** The Quality Review Rubric provides criteria to determine the quality and alignment of lessons and units to the Common Core State Standards (CCSS) in order to: (1) Identify exemplars/models for teachers’ use within and across states; (2) provide constructive criteria-based feedback to developers; and (3) review existing instructional materials to determine what revisions are needed.

**Step 1 – Review Materials**
- Record the grade and title of the lesson/unit on the recording form.
- Scan to see what the lesson/unit contains and how it is organized.
- Read key materials related to instruction, assessment and teacher guidance.
- Closely examine the materials through the “lens” of each criterion.
- Study and work the task that serves as the centerpiece for the lesson/unit, analyzing the content and mathematical practices the tasks require.

**Step 2 – Apply Criteria in Dimension I: Alignment**
- Identify the grade-level CCSS that the lesson/unit targets.
- Closely examine the materials through the “lens” of each criterion.
- Individually check each criterion for which clear and substantial evidence is found.
- Identify and record input on specific improvements that might be made to meet criteria or strengthen alignment.
- Enter your rating 0 – 3 for Dimension I: Alignment.

**Note:** Dimension I is non-negotiable. In order for the review to continue, a rating of 2 or 3 is required. If the review is discontinued, consider general feedback that might be given to developers/teachers regarding next steps.

**Step 3 – Apply Criteria in Dimensions II – IV**
- Closely examine the lesson/unit through the “lens” of each criterion.
- Record comments on criteria met, improvements needed and then rate 0 – 3.

When working in a group, individuals may choose to compare ratings after each dimension or delay conversation until each person has rated and recorded their input for the remaining Dimensions II – IV.

**Step 4 – Apply an Overall Rating and Provide Summary Comments**
- Review ratings for Dimensions I – IV adding/clarifying comments as needed.
- Write summary comments for your overall rating on your recording sheet.
- Total dimension ratings and record overall rating E, E/I, R, N – adjust as necessary.

If working in a group, individuals should record their overall rating prior to conversation.

**Step 5 – Compare Overall Ratings and Determine Next Steps**
- Note the evidence cited to arrive at final ratings, summary comments and similarities and differences among raters. Recommend next steps for the lesson/unit and provide recommendations for improvement and/or ratings to developers/teachers.

**Additional Guidance on Dimension II: Shifts** - When considering Focus it is important that lessons or units targeting additional and supporting clusters are sufficiently brief – this ensures that students will spend the strong majority of the year on major work of the grade. See the K-8 Publishers Criteria for the Common Core State Standards in Mathematics, particularly pages 8-9 for further information on the focus criterion with respect to major work of the grade at [www.corestandards.org/assets/Math_Publishers_Criteria_K-8_Summer%202012_FINAL.pdf](http://www.corestandards.org/assets/Math_Publishers_Criteria_K-8_Summer%202012_FINAL.pdf). With respect to Coherence it is important that the learning objectives are linked to CCSS cluster headings (see [www.corestandards.org/Math](http://www.corestandards.org/Math)).

**Rating Scales**

**Rating for Dimension I: Alignment** is non-negotiable and requires a rating of 2 or 3. If rating is 0 or 1 then the review does not continue.

**Rating Scale for Dimensions I, II, III, IV:**
3: Meets most to all of the criteria in the dimension
2: Meets many of the criteria in the dimension
1: Meets some of the criteria in the dimension
0: Does not meet the criteria in the dimension

**Descriptors for Dimensions I, II, III, IV:**
1. Developing toward CCSS Quality - needs significant revision, as suggested in criterion-based observations.
2. Approaching CCSS Quality - meets many criteria but will benefit from revision in others, as suggested in criterion-based observations.
3. Exemplifies CCSS Quality - meets the standard described by criteria in the dimension, as explained in criterion-based observations.
4. Meets most to all of the criteria in the dimension
5. Meets some of the criteria in the dimension
6. Does not meet the criteria in the dimension

**Overall Rating for the Lesson/Unit:**
E: Exemplar – aligned and meets most to all of the criteria in dimensions II, III, IV (total 12 – 14)
E/I: Exemplar if Improved – aligned and needs some improvement in one or more dimensions (total 8 – 10)
R: Revised Needed – aligned partially and needs significant revision in one or more dimensions (total 3 – 7)
N: Not Ready to Review – not aligned and does not meet criteria (total 0 – 2)

**Descriptor for Overall Ratings:**
E: Exemplifies CCSS Quality – aligned and exemplifies the quality standard and exemplifies most of the criteria across Dimensions II, III, IV of the rubric.
E/I: Approaching CCSS Quality – aligned and exemplifies the quality standard in some dimensions but will benefit from some revision in others.
R: Developing toward CCSS Quality – aligned partially and approaches the quality standard in some dimensions and needs significant revision in others.
N: Not representing CCSS Quality – not aligned and does not address criteria.

<td>EQuIP Rubric for Lessons &amp; Units: ELA/Literacy Grades K-2</td>
<td></td>
</tr>
</tbody>
</table>

### I. Alignment to the Depth of the CCSS

The lesson/unit aligns with the letter and spirit of the CCSS:
- Targets a set of K-2 ELA/Literacy CCSS for teaching and learning.
- Includes a clear and explicit purpose for instruction.
- Selects quality text(s) that align with the requirements outlined in the standards, presents characteristics similar to CCSS K-2 exemplars (Appendix B), and are of sufficient scope for the stated purpose.
- Provides opportunities for students to present ideas and information through writing and/or drawing and speaking experiences.

**A unit or longer lesson should:**
- Emphasize the explicit, systematic development of foundational literacy skills (concepts of print, phonological awareness, the alphabetic principle, high frequency sight words, and phonics).
- Regularly include specific fluency-building techniques supported by research (e.g., monitored partner reading, choral reading, repeated readings with text, following along in the text when teacher or other fluent reader is reading aloud, short timed practice that is slightly challenging to the reader).
- Integrate reading, writing, speaking and listening so that students apply and synthesize advancing literacy skills.
- Build students’ content knowledge in social studies, the arts, science or technical subjects through a coherent sequence of texts and series of questions that build knowledge within a topic.

### II. Key Shifts in the CCSS

The lesson/unit addresses key shifts in the CCSS:
- **Reading Text Closely:** Makes reading text(s) closely (including read alouds) a central focus of instruction and includes regular opportunities for students to ask and answer text-dependent questions.
- **Text-Based Evidence:** Facilitates rich text-based discussions and writing through specific, thought-provoking questions about common texts (including read alouds and, when applicable, illustrations, audio/video and other media).
- **Academic Vocabulary:** Focuses on explicitly building students’ academic vocabulary and concepts of syntax throughout instruction.

**A unit or longer lesson should:**
- Grade-Level Reading: Include a progression of texts as students learn to read (e.g., additional phonic patterns are introduced, increasing sentence length). Provides text-centered learning that is sequenced, scaffolded and supported to advance students toward independent grade-level reading.
- **Balance of Texts:** Focus instruction equally on literary and informational texts as stipulated in the CCSS (p.5) and indicated by instructional time (may be more applicable across a year or several units).
- **Balance of Writing:** Include prominent and varied writing opportunities for students that balance communicating thinking and answering questions with self-expression and exploration.

### III. Instructional Supports

The lesson/unit is responsive to varied student learning needs:
- Cultivates student interest and engagement in reading, writing and speaking about texts.
- Addresses instructional expectations and is easy to understand and use for teachers (e.g., clear directions, sample proficient student responses, sections that build teacher understanding of the whys and how of the material).
- Integrates targeted instruction in multiple areas such as grammar and syntax, writing strategies, discussion rules and aspects of foundational reading.
- Provides substantial materials to support students who need more time and attention to achieve automaticity with decoding, phonemic awareness, fluency and/or vocabulary acquisition.
- Provides all students (including emergent and beginning readers) with extensive opportunities to engage with grade-level texts and read alouds that are at high levels of complexity including appropriate scaffolding so that students directly experience the complexity of text.

**A unit or longer lesson should:**
- Grade-Level Reading: Include a progression of texts as students learn to read (e.g., additional phonic patterns are introduced, increasing sentence length). Provides text-centered learning that is sequenced, scaffolded and supported to advance students toward independent grade-level reading.
- **Balance of Texts:** Focus instruction equally on literary and informational texts as stipulated in the CCSS (p.5) and indicated by instructional time (may be more applicable across a year or several units).
- **Balance of Writing:** Include prominent and varied writing opportunities for students that balance communicating thinking and answering questions with self-expression and exploration.

### IV. Assessment

The lesson/unit regularly assesses whether students are developing standards-based skills:
- Elicits direct, observable evidence of the degree to which a student can independently demonstrate foundational skills and targeted grade-level literacy CCSS (e.g., reading, writing, speaking and listening and/or language).
- Assesses student proficiency using methods that are unbiased and accessible to all students.
- Includes aligned rubrics or assessment guidelines that provide sufficient guidance for interpreting student performance and responding to areas where students are not yet meeting standards.

**A unit or longer lesson should:**
- Use varied modes of assessment, including a range of pre-, formative, summative and self-assessment measures.

---

The EQuIP rubric is derived from the Tri-State Rubric and the collaborative development process led by Massachusetts, New York, and Rhode Island and facilitated by Achieve. This version of the EQuIP rubric is current as of 06-24-13.
EQuiP Rubric for Lessons & Units: ELA/Literacy Grades K-2

**Directions:** The Quality Review Rubric provides criteria to determine the quality and alignment of lessons and units to the Common Core State Standards (CCSS) in order to: (1) Identify exemplars/ models for teachers’ use within and across states; (2) provide constructive criteria-based feedback to developers; and (3) review existing instructional materials to determine what revisions are needed.

**Step 1 – Review Materials**
- Record the grade and title of the lesson/unit on the recording form.
- Scan to see what the lesson/unit contains and how it is organized.
- Read key materials related to instruction, assessment and teacher guidance.
- Study and measure the text(s) that serve as the centerpiece for the lesson/unit, analyzing text complexity, quality, scope, and relationship to instruction.

**Step 2 – Apply Criteria in Dimension I: Alignment**
- Identify the grade-level CCSS that the lesson/unit targets.
- Closely examine the materials through the “lens” of each criterion.
- Individually check each criterion for which clear and substantial evidence is found.
- Identify and record input on specific improvements that might be made to meet criteria or strengthen alignment.
- Enter your rating 0 – 3 for Dimension I: Alignment

*Note: Dimension I is non-negotiable. In order for the review to continue, a rating of 2 or 3 is required. If the review is discontinued, consider general feedback that might be given to developers/teachers regarding next steps.*

**Step 3 – Apply Criteria in Dimensions II – IV**
- Closely examine the lesson/unit through the “lens” of each criterion.
- Record comments on criteria met, improvements needed and then rate 0 – 3.

*When working in a group, individuals may choose to compare ratings after each dimension or delay conversation until each person has rated and recorded their input for the remaining Dimensions II – IV.*

**Step 4 – Apply an Overall Rating and Provide Summary Comments**
- Review ratings for Dimensions I – IV adding/clarifying comments as needed.
- Write summary comments for your overall rating on your recording sheet.
- Total dimension ratings and record overall rating E, E/I, R, N – adjust as necessary.

*If working in a group, individuals should record their overall rating prior to conversation.*

**Step 5 – Compare Overall Ratings and Determine Next Steps**
- Note the evidence cited to arrive at final ratings, summary comments and similarities and differences among raters. Recommend next steps for the lesson/unit and provide recommendations for improvement and/or ratings to developers/teachers.

**Additional Guidance for ELA/Literacy** – When selecting text(s) that measure within the grade-level or text complexity band and are of sufficient quality and scope for the stated purpose, see The Common Core State Standards in English Language Arts/Literacy at [www.corestandards.org/ELA-Literacy](http://www.corestandards.org/ELA-Literacy); and the Supplement for Appendix A: New Research on Text Complexity as well as Quantitative and Qualitative Measures at [www.achievethecore.org/steal-these-tools/text-complexity](http://www.achievethecore.org/steal-these-tools/text-complexity). See The Publishers’ Criteria for Grades K-2 and the same for Grades 3-12 at [www.achievethecore.org/steal-these-tools](http://www.achievethecore.org/steal-these-tools).

**Rating Scales**

*Note: Rating for Dimension I: Alignment is non-negotiable and requires a rating of 2 or 3. If rating is 0 or 1 then the review does not continue.*

**Rating Scale for Dimensions I, II, III, IV:**
- 3: Meets most to all of the criteria in the dimension
- 2: Meets many of the criteria in the dimension
- 1: Meets some of the criteria in the dimension
- 0: Does not meet the criteria in the dimension

**Descriptors for Dimensions I, II, III, IV:**
1. **Developing toward CCSS Quality** – needs significant revision, as suggested in criterion-based observations.
2. **Not representing CCSS Quality** – does not address the criteria in the dimension.

**Overall Rating for the Lesson/Unit:**
- E: Exemplar – Aligned and meets most to all of the criteria in dimensions II, III, IV (total 11 – 12)
- E/I: Exemplar if Improved – Aligned and needs some improvement in one or more dimensions (total 10)
- R: Revision Needed – Aligned partially and needs significant revision in one or more dimensions (total 8)
- N: Not Ready to Review – Not aligned and does not meet criteria (total 0)

**Descriptors for Overall Rating:**
1. **Developing toward CCSS Quality** – Aligned partially and approaches the quality standard in some dimensions and needs significant revision in others.
2. **Not representing CCSS Quality** – Not aligned and does not address criteria.
I. Alignment to the Depth of the CCSS

The lesson/unit aligns with the letter and spirit of the CCSS:
- Targets a set of grade-level CCSS ELA/Literacy standards.
- Includes a clear and explicit purpose for instruction.
- Selects text(s) that measure within the grade-level text complexity band and are of sufficient quality and scope for the stated purpose (e.g., presents vocabulary, syntax, text structures, levels of meaning/purpose, and other qualitative characteristics similar to CCSS grade-level exemplars in Appendices A & B).

A unit or longer lesson should:
- Integrate reading, writing, speaking and listening so that students apply and synthesize advancing literacy skills.
- (Grades 3-5) Build students’ content knowledge and their understanding of reading and writing in social studies, the arts, science or technical subjects through the coherent selection of texts.

II. Key Shifts in the CCSS

The lesson/unit addresses key shifts in the CCSS:
- **Reading Text Closely**: Makes reading text(s) closely, examining textual evidence, and discerning deep meaning a central focus of instruction.
- **Text-Based Evidence**: Facilitates rich and rigorous evidence-based discussions and writing about common texts through a sequence of specific, thought-provoking, and text-dependent questions (including, when applicable, questions about illustrations, charts, diagrams, audio/video, and media).
- **Writing from Sources**: Routinely expects that students draw evidence from texts to produce clear and coherent writing that informs, explains, or makes an argument in various written forms (e.g., notes, summaries, short responses, or formal essays).
- **Academic Vocabulary**: Focuses on building students’ academic vocabulary in context throughout instruction.

A unit or longer lesson should:
- **Increasing Text Complexity**: Focus students on reading a progression of complex texts drawn from the grade-level band. Provide text-centered learning that is sequenced, scaffolded and supported to advance students toward independent reading of complex texts at the CCR level.
- **Building Disciplinary Knowledge**: Provide opportunities for students to build knowledge about a topic or subject through analysis of a coherent selection of strategically sequenced, discipline-specific texts.
- **Balance of Texts**: Within a collection of grade-level units a balance of informational and literary texts is included according to guidelines in the CCSS (p. 5).
- **Balance of Writing**: Include a balance of on-demand and process writing (e.g., multiple drafts and revisions over time) and short, focused research projects, incorporating digital texts where appropriate.

III. Instructional Supports

The lesson/unit is responsive to varied student learning needs:
- Cultivates student interest and engagement in reading, writing and speaking about texts.
- Addresses instructional expectations and is easy to understand and use.
- Provides all students with multiple opportunities to engage with text of appropriate complexity for the grade level; includes appropriate scaffolding so that students directly experience the complexity of the text.
- Focuses on challenging sections of text(s) and engages students in a productive struggle through discussion questions and other supports that build toward independence.
- Integrates appropriate supports in reading, writing, listening and speaking for students who are ELI, have disabilities, or read well below the grade level text band.
- Provides extensions and/or more advanced text for students who read well above the grade level text band.

A unit or longer lesson should:
- **Include a progression of learning where concepts and skills advance and deepen over time (may be more applicable across the year or several units)**.
- Gradually remove supports, requiring students to demonstrate their independent capacities (may be more applicable across the year or several units).
- Provide for authentic learning, application of literacy skills, student-directed inquiry, analysis, evaluation and/or reflection.
- Integrate targeted instruction in such areas as grammar and conventions, writing strategies, discussion rules and all aspects of foundational reading for grades 3-5.
- Indicate how students are accountable for independent reading based on student choice and interest to build stamina, confidence and motivation (may be more applicable across the year or several units).
- Use technology and media to deepen learning and draw attention to evidence and texts as appropriate.

IV. Assessment

The lesson/unit regularly assesses whether students are mastering standards-based content and skills:
- **Elicits direct, observable evidence of the degree to which a student can independently demonstrate the major targeted grade-level CCSS standards with appropriately complex text(s)**.
- **Assesses student proficiency using methods that are unbiased and accessible to all students**.
- **Includes aligned rubrics or assessment guidelines that provide sufficient guidance for interpreting student performance**.

A unit or longer lesson should:
- Use varied modes of assessment, including a range of pre-, formative, summative and self-assessment measures.

| Rating: 3 2 1 0 | Rating: 3 2 1 0 | Rating: 3 2 1 0 | Rating: 3 2 1 0 |

The EQuIP rubric is derived from the Tri-State Rubric and the collaborative development process led by Massachusetts, New York, and Rhode Island and facilitated by Achieve. This version of the EQuIP rubric is current as of 06-24-13.

View Creative Commons Attribution 3.0 Unported License at [http://creativecommons.org/licenses/by/3.0/]. Educators may use or adapt. If modified, please attribute EQuIP and re-title.
**EQuIP Rubric for Lessons & Units: ELA/Literacy (Grades 3-5) and ELA (Grades 6-12)**

**Directions:** The Quality Review Rubric provides criteria to determine the quality and alignment of lessons and units to the Common Core State Standards (CCSS) in order to: (1) Identify exemplars/models for teachers’ use within and across states; (2) provide constructive criteria-based feedback to developers; and (3) review existing instructional materials to determine what revisions are needed.

**Step 1 – Review Materials**
- Record the grade and title of the lesson/unit on the recording form.
- Scan to see what the lesson/unit contains and how it is organized.
- Read key materials related to instruction, assessment and teacher guidance.
- Study and measure the text(s) that serves as the centerpiece for the lesson/unit, analyzing text complexity, quality, scope, and relationship to instruction.

**Step 2 – Apply Criteria in Dimension I: Alignment**
- Identify the grade-level CCSS that the lesson/unit targets.
- Closely examine the materials through the “lens” of each criterion.
- Individually check each criterion for which clear and substantial evidence is found.
- Identify and record input on specific improvements that might be made to meet criteria or strengthen alignment.
- Enter your rating 0 – 3 for Dimension I: Alignment

**Note:** Dimension I is non-negotiable. In order for the review to continue, a rating of 2 or 3 is required. If the review is discontinued, consider general feedback that might be given to developers/teachers regarding next steps.

**Step 3 – Apply Criteria in Dimensions II – IV**
- Closely examine the lesson/unit through the “lens” of each criterion.
- Record comments on criteria met, improvements needed and then rate 0 – 3.

When working in a group, individuals may choose to compare ratings after each dimension or delay conversation until each person has rated and recorded their input for the remaining Dimensions II – IV.

**Step 4 – Apply an Overall Rating and Provide Summary Comments**
- Review ratings for Dimensions I – IV adding/clarifying comments as needed.
- Write summary comments for your overall rating on your recording sheet.
- Total dimension ratings and record overall rating E, E/I, R, N – adjust as necessary.

**If working in a group, individuals should record their overall rating prior to conversation.**

**Step 5 – Compare Overall Ratings and Determine Next Steps**
- Note the evidence cited to arrive at final ratings, summary comments and similarities and differences among raters. Recommend next steps for the lesson/unit and provide recommendations for improvement and/or ratings to developers/teachers.

**Additional Guidance for ELA/Literacy** – When selecting text(s) that measure within the grade-level text complexity band and are of sufficient quality and scope for the stated purpose, see The Common Core State Standards in English Language Arts/Literacy at www.corestandards.org/ELA-Literacy; and the Supplement for Appendix A: New Research on Text Complexity as well as Quantitative and Qualitative Measures at www.achievethecore.org/steal-these-tools/text-complexity. See The Publishers’ Criteria for Grades K-2 and the same for Grades 3-12 at www.achievethecore.org/steal-these-tools.

**Rating Scales**

**Note:** Rating for Dimension I: Alignment is non-negotiable and requires a rating of 2 or 3. If rating is 0 or 1 then the review does not continue.

**Descriptors for Dimensions I, II, III, IV:**

3: Exemplifies CCSS Quality – meets the standard described by criteria in the dimension, as explained in criterion-based observations.
2: Approaching CCSS Quality – meets many criteria but will benefit from revision in others, as suggested in criterion-based observations.
1: Developing toward CCSS Quality – needs significant revision, as suggested in criterion-based observations.
0: Does not address the criteria in the dimension.

**Describing Overall Rating:**

E: Exemplifies CCSS Quality – Aligned and exemplifies the quality standard across Dimensions II, III, IV; exemplifies most of the criteria across Dimensions II, III, IV; exemplifies the quality standard and exemplifies most of the criteria across Dimensions II, III, IV of the rubric.
E/I: Approaching CCSS Quality – Aligned and exemplifies the quality standard in some dimensions but will benefit from some revision in others.
R: Developing toward CCSS Quality – Aligned partially and approaches the quality standard in some dimensions and needs significant revision in others.
Section 4

Assessment Evaluation Tool (AET)

206  ELA/Literacy, Grades 3–12
254  Mathematics, Grades K–12
Assessment Evaluation Tool (AET)

ELA/Literacy, Grades 3–12
Assessment Evaluation Tool
ELA/Literacy, Grades 3–12

This ELA/literacy AET is designed to help educators determine whether or not assessments and sets of assessments are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-english-language-arts/) at the heart of the Common Core State Standards are:

- **Complexity**: Regular practice with complex text and its academic language
- **Evidence**: Reading, writing, and speaking grounded in evidence from text, both literary and informational
- **Knowledge**: Building knowledge through content-rich non-fiction

The AET draws directly from the following documents:

- Common Core State Standards for English Language Arts & Literacy in History/Social Studies, Science, and Technical Subjects (http://www.corestandards.org/ELA-Literacy/)
- Publishers’ Criteria for the Common Core State Standards in ELA/Literacy grades 3 – 12 (http://corestandards.org/assets/Publishers_Criteria_for_3-12.pdf)
- Supplement to Appendix A of the Common Core State Standards for ELA/Literacy: New Research on Text Complexity (www.corestandards.org/assets/E0813_Appendix_A_New_Research_on_Text_Complexity.pdf)

**When to use the AET**

1. Purchasing assessments: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. The AET is designed to evaluate alignment of assessments and sets of assessments to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the assessment evaluation and purchasing process.

2. Evaluating assessments in use: The AET can be used to analyze the degree of alignment of existing assessments and sets of assessments and help to highlight specific, concrete flaws in alignment. Even where assessments currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify assessments and sets of assessments in such a way that they better meet the requirements of the Standards.

3. Developing assessments: This tool can be used to provide guidance for and evaluation of alignment for creating locally developed assessments and sets of assessments. Those developing new aligned assessments should use the criteria within the AET to guide test blueprint construction, item specifications development, and item evaluation procedures.

**Who Uses the AET**

The AET is designed for use by educators and administrators including content specialists, assessment specialists, administrators and educators at the school, district or state level. Evaluating assessments and sets of assessments requires both subject-matter and technical expertise. Evaluators should be well versed in the Standards (http://www.corestandards.org/ELA-Literacy/) for all grades in which assessments are being evaluated. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-english-language-arts/) of Complexity, Evidence and Knowledge that are listed above. If possible, it would be helpful if at least one member of the evaluation team is well versed in ELA/literacy assessment.
Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation, e.g., test forms, test blueprints, test item metadata, item bank summaries, sample score reports. It is essential to have materials for all grades covered by the assessment program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for ELA/Literacy and the Publishers’ Criteria for the Common Core State Standards in ELA/Literacy grades 3 – 12.

Sections 1 – 3 below should be completed to produce a comprehensive picture of the strengths and weaknesses of the assessments under evaluation. Information about areas in need of improvement should be shared with internal and external stakeholders.

Navigating the Tool

The AET contains criteria for five ELA/literacy domains: Reading, Writing, Language, and Speaking and Listening. Assessments do not have to contain all of the ELA/literacy domains in order to be evaluated with the AET or to align with the CCSS. Choose the Non-Negotiables and/or Alignment Criteria that apply to the assessments being evaluated.

If reading is being assessed*, begin with Section 1: Non-Negotiable Alignment Criteria (p. 209).

• The Non-Negotiable Alignment Criteria must each be met in full for reading assessments to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has three metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

• Examine the relevant materials and use evidence to rate the materials against each criterion and its associated metrics.

• Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria (p. 219).

• The Alignment Criteria for the domains covered by the assessment program under evaluation must each be met for materials to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Alignment Criterion has two or more metrics associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

• The domains covered within the Alignment Criteria section are: Reading, Writing, Language, and/or Speaking and Listening.

• Examine the materials in relation to the relevant criteria, assigning each metric a point value. Rate each criterion as “Meets” or “Does Not Meet” based on the number of points assigned. The more points the materials receive on the alignment criteria, the better they are aligned.

• Record and explain the evidence upon which the rating is based.

Complete Section 3: Evaluation Summary (p. 248).

• Compile all of the results from Sections 1 and 2 to determine if the assessments are aligned to the Shifts and major features of the CCSS.

Proceed to Section 4: Indicators of Quality (p. 250).

• Indicators of Quality are important considerations that will help evaluators better understand the overall quality of an assessment program. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics, such as ensuring accessibility for all students. Evaluators may want to add their own indicators to the examples provided.

NOTE: The word “text” has been used to apply to written, audio, video, and quantitative stimuli. The AET should be applied to non-print materials as appropriate.

* It is assumed that reading will be a significant component of most assessment systems subject to evaluation. When an assessment does not include Reading, the Alignment Criteria for the domains being evaluated (Writing, Language, Speaking and Listening) should be used.
Directions for Non-Negotiable 1
Reading – Complexity and Quality of Texts

Non-Negotiable 1: Texts are worthy of student time and attention; they have the appropriate level of complexity for the grade, according to both quantitative and qualitative analyses of text complexity.

Required Materials

• The texts in the test forms for each grade level or (for an item bank) a random sample of texts for each grade level

• Metadata accompanying the texts, especially quantitative and qualitative analyses of text complexity and copyright acknowledgements

Rating this Criterion

The assessments should be rated for each of the following three metrics as Meets or Does Not Meet. If any one of the metrics is rated as Does Not Meet, then the assessments fail Non-Negotiable 1. If all metrics are rated as Meets, the assessments pass this Non-Negotiable.

Whether the assessments are rated as Meets or Does Not Meet, provide specific examples of evidence in support of the ratings, including evidence of any specific gaps in the assessments.
Non-Negotiable 1
Reading – Complexity and Quality of Texts

Section 4
Assessment Evaluation Tool (AET)
ELA/Literacy, Grades 3 -12

Metric

NN Metric 1A:
At least 90% of texts used for assessment are placed within or below the grade band indicated by a quantitative analysis, with the average complexity of texts increasing grade-by-grade. Exceptions—in which the text is placed above the indicated grade band—are usually reserved for literary texts in the upper grades. When materials are published, the quantitative data accompany the materials.

Procedure for Evaluation

Every text should be accompanied by data from at least one research-based quantitative tool for grade band placement (poetry and drama excepted). The same tool(s) should be used consistently across the grade levels.

If quantitative data is not available, evaluators should obtain a Lexile or other rating for the text (see http://achievethecore.org/text-complexity).

For each grade, examine the metadata or other explanatory materials accompanying either the texts on the test form(s) or a representative sample of at least three literary and three informational texts from the item bank.

Make a list of each text title and the grade to which it has been assigned; group by grade band. Note the grade band indicated by the quantitative tool(s) and the actual grade band placement.

Calculate an overall percentage of the texts that have been placed at or below the grade band indicated by the quantitative data, allowing exceptions for literary texts as appropriate.

#### Rating

- [ ] Meets
- [ ] Does Not Meet
Non-Negotiable 1
Reading – Complexity and Quality of Texts

Metric

NN Metric 1C:
At least 95% of texts used for assessment are of publishable quality—preferably previously published but at minimum edited by professional publication editors (not only assessment editors). History/social studies and science/technical texts, specifically, reflect the quality of writing that is produced by authorities in the particular academic discipline.

Procedure for Evaluation

All texts should be high quality and content rich—worthy of student attention. Nearly all texts should be previously published rather than “commissioned” because published texts have been selected and edited by professional publication editors.

For each grade, examine the metadata or other explanatory materials accompanying the same texts from Non-Negotiable 1A above.

Look for an acknowledgment line for each text (usually found at the front of the test booklet or below the text), which cites an author or publisher and date of publication, or look for a statement that the text has been edited by a professional publication editor.

Label the texts that are accompanied by an acknowledgment line or are shown to have been edited professionally.

Identify any texts that do not represent quality literary or informational writing.

Calculate the percentage of texts that are not of publishable quality.

Non-Negotiable 1
Reading – Complexity and Quality of Texts

Non-Negotiable 1: Texts are worthy of student time and attention; they have the appropriate level of complexity for the grade, according to both quantitative and qualitative analyses of text complexity.

Rating for Non-Negotiable 1

If all three metrics above were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more of the metrics were rated as Does Not Meet, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Strengths / Weaknesses:

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 248.
Directions for Non-Negotiable 2
Reading – Text-Dependent and Standards-Based Questions

Non-Negotiable 2: High-quality reading test questions are text-dependent and Standards-based; they require students to read closely, find the answers within the text, and use textual evidence to support responses.

Required Materials

- The test questions in the test forms for each grade level or (for an item bank) a representative sample of test questions
- Metadata accompanying the test questions, showing the alignment of each question to the CCSS

Rating this Criterion

The assessments should be rated for each of the following three metrics as Meets or Does Not Meet. If any one of the metrics is rated as Does Not Meet, then the assessments fail Non-Negotiable 2. If all metrics are rated as Meets, the assessments pass this Non-Negotiable.

Whether the assessments are rated as Meets or Does Not Meet, provide specific examples of evidence in support of the ratings, including evidence of any specific gaps in the assessments.
## Non-Negotiable 2
Reading – Text-Dependent and Standards-Based Questions

### Metric

**NN Metric 2A:**
At least 90% of the questions are text dependent: they require close reading and analysis of the text, focus on its central ideas and important particulars, and require answers based on what is in (not outside) the text.

### Procedure for Evaluation

Questions should require thoughtful reading of the text, not just skimming or superficial consideration. As a set, questions should enable students to demonstrate deep understanding of the unique aspects of the text. Students should be able to answer the questions correctly without prior knowledge. Questions should be derived from a reading text (i.e., not “stand alone” questions).

For each grade, examine either the test questions on the test form(s) or a representative sample of at least 15 questions based on literary texts and 15 based on informational texts per grade in the item bank.

Identify the questions that do not meet this metric: List the sequence numbers of any questions that do not require close reading and analysis, e.g., the questions assess simple recall or minor textual points. List the sequence numbers of any questions that, as a set, focus on peripheral aspects of the text, failing to permit students to demonstrate deep understanding of the text. List the sequence numbers of any questions that call on students’ prior knowledge or are “stand-alone” questions.

Calculate percentages of test questions that do not meet the metric.

<td></td>
</tr>
</tbody>
</table>

### Rating

- [ ] Meets
- [ ] Does Not Meet
Non-Negotiable 2
Reading – Text-Dependent and Standards-Based Questions

Metric

NN Metric 2C:
At least 90% of test questions assess the specifics of the Standards at each grade level (not just the Anchor Standards) and do not employ “generic” answer choices applicable to any text.

Procedure for Evaluation

Questions should assess the specific requirements delineated by the Standards. For example, if a Standard requires a focus on two central ideas, two ideas should be assessed; if a Standard calls for the meaning of figurative language, meaning should be assessed, not literary terms like metaphor or personification.

Questions should not be aligned only to Anchor Standards. Multiple-choice or technology-enhanced items should be text-specific, not relying on “generic” choices (e.g., “to inform,” “to persuade,” “to entertain”) that could be used for any text. Not every Standard must be assessed with every text.

For each grade, examine the test questions assembled under Non-Negotiable 2A above, along with their metadata. Identify the questions that do not meet this metric: List the sequence numbers of any questions that fail to assess the specific requirements of the Standards at the grade level. List the sequence numbers of any questions that are aligned only to the Anchor Standards. List the sequence numbers of any questions that provide “generic” answer choices that could be used for any text.

Calculate percentages of questions that do not meet the metric.

Reading – Text-Dependent and Standards-Based Questions

Non-Negotiable 2: High-quality reading test questions are text-dependent and Standards-based; they require students to read closely, find the answers within the text, and use textual evidence to support responses.

Rating for Non-Negotiable 2

If all three metrics above were rated as Meets, then rate Non-Negotiable 2 as Meets. If one or more of the metrics were rated as Does Not Meet, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Rating

☐ Meets
☐ Does Not Meet

Strengths / Weaknesses:

Before moving to the Alignment Criteria, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 248.

Now continue by evaluating the Alignment Criteria 1-4 for Reading.
Directions for Alignment Criterion 1
Reading – Range of Texts

Alignment Criterion 1: Texts reflect the distribution of text types and genres required by the reading Standards.

Required Materials

• The texts in the test forms for each grade level or (for an item bank) a random sample of texts for each grade level

• Metadata accompanying the texts, especially quantitative and qualitative analyses of text complexity and copyright acknowledgments

• The test questions in the test forms for each grade level or (for an item bank) a representative sample of test questions

• Metadata accompanying the test questions, showing the alignment of each question to the CCSS

• Test blueprints and other explanatory material focused on test design, including sample score reports if available

Rating this Criterion

Rate the assessments for each of the metrics for these Alignment Criteria as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Then rate the Alignment Criteria as a group as Meets or Does Not Meet, based on the minimum number of points required. For the Alignment Criteria for reading, materials must earn at least 16 of 20 points to align to the Shifts and major features of the Common Core State Standards. The more points the materials receive on the Alignment Criterion, the better the materials are aligned.

Evaluators should provide examples of evidence in support of the numerical rating for each metric, including evidence of any specific gaps in the materials.

</table>

### Rating

- [ ] Meets (2)
- [ ] Partially Meets (1)
- [ ] Does Not Meet (0)
Alignment Criterion 1
Reading – Range of Texts

Metric

AC Metric 1B:
At least 90% of the literary and informational texts represent the genres and text characteristics that are specifically required by the reading Standards at each grade level.

If the above metric is met, assign the materials 2 points. If 60% to 90% of the texts meet the specific requirements of the Standards at each grade, assign 1 point.

Procedure for Evaluation

At all grades, text types should match the Standards (e.g., specific genres and subgenres of fiction and nonfiction, foundational or seminal documents).

For each grade, examine the metadata accompanying the same texts as those used to evaluate the metrics in Non-Negotiable 1 above.

Write the genre or type next to each text on the list (e.g., “story,” “poem,” “literary nonfiction,” “science/technical,” “history/social studies”).

Compare the text characteristics to those required by the Standards at each grade and identify any texts that do not match the characteristics for that grade.

Calculate percentages.

Directions for Alignment Criterion 2
Reading – Assessing Vocabulary

Alignment Criterion 2: Because of the importance of vocabulary acquisition and use to college and career readiness, vocabulary questions comprise a significant part of ELA/literacy assessments, assess tier 2 words in context, and focus on central ideas in the text.

Required Materials

- The texts in the test forms for each grade level or (for an item bank) a random sample of texts for each grade level
- Metadata accompanying the texts, especially quantitative and qualitative analyses of text complexity and copyright acknowledgments
- The test questions in the test forms for each grade level or (for an item bank) a representative sample of test questions
- Metadata accompanying the test questions, showing the alignment of each question to the CCSS
- Test blueprints and other explanatory material focused on test design, including sample score reports if available

Rating this Criterion

Rate the assessments for each of the metrics for these Alignment Criteria as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Then rate the Alignment Criteria as a group as Meets or Does Not Meet, based on the minimum number of points required. For the Alignment Criteria for reading, materials must earn at least 16 of 20 points to align to the Shifts and major features of the Common Core State Standards. The more points the materials receive on the Alignment Criterion, the better the materials are aligned.

Evaluators should provide examples of evidence in support of the numerical rating for each metric, including evidence of any specific gaps in the materials.
Alignment Criterion 2
Reading – Assessing Vocabulary

Metric

AC Metric 2A:
At least 66% of vocabulary items emphasize the academic language that is crucial for readiness, and at least 90% require use of context to determine meaning.

If the above metric is met, assign the materials 2 points. If 40% to 66% of vocabulary items emphasize academic language, assign 1 point.

Procedure for Evaluation

Most of the vocabulary items on assessments and in an item bank should assess academic vocabulary (tier 2) words or phrases in context. The remaining vocabulary items should assess other kinds of words named in the Standards (e.g., figurative and domain-specific language).

For each grade, examine either the vocabulary questions on the test form(s) or a representative sample (at least 15 vocabulary questions per grade) in the item bank.

List the sequence numbers of the questions that do not assess academic language (tier 2) words or phrases in context.

Calculate percentages.

The more points the materials receive on the Alignment Criterion, the better the materials are aligned.

Evaluators should provide examples of evidence in support of the numerical rating for each metric, including evidence of any specific gaps in the materials.
### Alignment Criterion 3
Reading – Aligned Use of Item Types

<table>
<thead>
<tr>
<th>Metric</th>
<th>Procedure for Evaluation</th>
<th>Evidence</th>
</tr>
</thead>
</table>
| **AC Metric 3A:** Assessments employ at least one item type that requires students to write rather than select a response (brief or extended constructed-response or performance tasks), so that the depth and complexity of the Standards can be strategically addressed. | Tests that are well aligned (2 points) make use of an item type that requires writing rather than selecting a response (brief or extended constructed-response items or performance tasks). If additional item types are used, they may be selected-response in format. Tests that are moderately aligned (1 point) do not offer constructed-response or performance tasks but make use of at least two different selected-response item types (e.g., multiple-choice, two-part evidence-based selected-response items, technology-enhanced items). | For each grade, examine the questions assembled for Non-Negotiable 2A above. 
Determine which item types are being used. Note whether or not constructed-response items (either brief or extended) are included. |

If the above metric is met, assign the materials 2 points. If the tests employ more than one item type but do not include an item type that requires students to write a response, assign 1 point.

#### Rating

- [ ] Meets (2)
- [ ] Partially Meets (1)
- [ ] Does Not Meet (0)
Alignment Criterion 3
Reading – Aligned Use of Item Types

Metric

AC Metric 3B:
At least 50% of the score points on each assessment are derived from items that require students to directly provide evidence from the text to support answers, i.e., the items ask students to provide details (quotations or paraphrases) from the text in support of text-based claims or inferences.

If the above metric is met, assign the materials 2 points. If 30% to 50% of score points on each assessment are derived from items that require students to directly provide textual evidence, assign 1 point.

Procedure for Evaluation

Aligned tests emphasize reading and writing grounded in evidence from text, both literary and informational. Formats requiring direct use of evidence include:

• Constructed-response (CR), requiring students to use textual evidence in written responses
• Two-part evidence-based selected-response (EBSR), with one part asking for textual evidence
• Technology-enhanced (TE), requiring students to select or locate evidence within a passage
• One-part multiple-choice (MC) or TE with answer options consisting of textual details (e.g., actual quotations from the text)

For each grade, examine the questions assembled for Non-Negotiable 2A above, along with the passages on which the questions are based.

List the sequence numbers of the questions that require direct use of textual evidence.

Determine the number of score points.

Calculate percentages.

Alignment Criterion 3
Reading – Aligned Use of Item Types

Metric

AC Metric 3C:
Research-focused performance tasks require students to analyze, synthesize, organize, and use information from sources; such tasks comprise a significant part of the assessments—at least 8 score points per test (which is a generally accepted minimum for a reporting category).

Procedure for Evaluation

Aligned performance tasks are based on paired or multiple texts, and they measure one or more Standards that focus on research skills, e.g., Reading Standard 7, Reading Standard 9, Writing Standard 7.

Aligned test items are based on paired or multiple texts, and they specifically require students to analyze, synthesize, organize, and use information from sources (e.g., not merely identify a title of a likely source or a section in a table of contents).

For each grade, determine if there is sufficient coverage of research and if the questions meet this metric:

- Examine either the test blueprints or other test specifications.
- Determine whether or not there are at least 8 score points devoted to research tasks or test questions.
- Examine the questions labeled as assessing research.
- Determine whether or not the questions require analysis, synthesis, organization, and use of information rather than simple identification.

Reading

Points Assigned for Alignment Criteria 1–4

Materials must earn at least 16 of 20 points to meet the Alignment Criteria 1 – 4 for reading. If materials earn fewer than 16 points, the Criteria have not been met. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of these Criteria.

Before moving on to the next Alignment Criterion, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 248.
Directions for Alignment Criterion 5
Writing – Writing to Sources

Alignment Criterion 5: Writing tasks reflect the writing types named in the Standards and require students to write to sources.

Required Materials

- The writing prompts, performance tasks, or constructed-response test questions in the test forms for each grade level or (for an item bank) a representative sample of writing prompts, performance tasks, or constructed-response test questions
- Metadata accompanying the prompts, tasks, or questions, showing the alignment of each to the CCSS
- Test blueprints and other explanatory material focused on test design, including sample score reports if available

Rating this Criterion

Rate the assessments for each of the metrics for this Alignment Criterion as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Then rate the Alignment Criterion as a whole as Meets or Does Not Meet, based on the minimum number of points required. For the Alignment Criterion for writing, materials must earn at least 3 of 4 points to align to the Shifts and major features of the Common Core State Standards. The more points the materials receive on the Alignment Criterion, the better the materials are aligned.

Evaluators should provide examples of evidence in support of the numerical rating for each metric, including evidence of any specific gaps in the materials.

NOTE: Many well-aligned programs place research tasks within the reading assessment rather than the writing assessment. If the materials being evaluated include research tasks in the writing assessment, evaluate those tasks using Reading Alignment Criterion 3C.
Alignment Criterion 5
Writing – Writing to Sources

Metric

AC Metric 5A:
Taking all forms of the test together, 100% of writing tasks within a grade band approximate the balance of exposition, persuasion, and narrative required by the Standards (or blend writing types in similar proportions):

- Grades 3-5:
  - exposition 35%
  - opinion 30%
  - narrative 35%

- Grades 6-8:
  - exposition 35%
  - argument 35%
  - narrative 30%

- High School:
  - exposition 40%
  - argument 40%
  - narrative 0-20%

If the above metric is met, assign the materials 2 points. If narrative writing is greater than the indicated percentages but less than 50% of writing tasks, assign 1 point. If narrative tasks comprise more than 50% of writing tasks, assign 0 points.

Procedure for Evaluation

As students progress through the grades, an increasing focus on both argument and explanatory/informational writing is crucial for readiness.

For each grade band, examine either the writing tasks and/or constructed-response items on the Reading and Writing test form(s) or a representative sample (a minimum of 15 prompts or tasks) from the item bank for each grade band.

List the writing type for each task or item.

Calculate percentages of each of the three types of writing within each band.

## Alignment Criterion 5
### Writing – Writing to Sources

### Metric

**AC Metric 5B:**
At least 90% of expository and argument/persuasive writing tasks require writing to sources — i.e., students confront text directly, draw on textual evidence, and support valid inferences from the text.

If the above metric is met, assign the materials 2 points. If 75% to 90% of expository and argument/persuasive prompts require writing to sources, assign 1 point.

### Procedure for Evaluation

For expository and argument/persuasive prompts, students should be required to read texts and draw on textual evidence to support valid claims and inferences.

For each grade band, examine the writing items from Alignment Criterion 5A above.

List any prompts or tasks that do not require writing to sources.

Calculate the percentage of expository and argument/persuasive prompts requiring writing to sources within each band.

Alignment Criterion 5
Writing – Writing to Sources

Alignment Criterion 5: Writing tasks reflect the writing types named in the Standards and require students to write to sources.

Points Assigned for Alignment Criterion 5

Materials must earn at least 3 of 4 points to meet Alignment Criterion 5 for writing. If materials earn fewer than 3 points, the Criterion has not been met. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Rating

Total (4 points possible)

☐ Meets
☐ Does Not Meet

Strengths / Weaknesses:

Before moving to the next Alignment Criterion, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 248.
Directions for Alignment Criterion 6
Language

Alignment Criterion 6: Test questions assessing conventions and writing strategies focus on the specifics of the Standards and reflect actual practice to the extent possible.

Required Materials

- The test questions in the test forms for each grade level or (for an item bank) a representative sample of test questions
- Metadata accompanying the questions, showing the alignment of each to the CCSS
- Test blueprints and other explanatory material focused on test design, including sample score reports if available

Rating this Criterion

Rate the assessments for each of the metrics for this Alignment Criterion as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Then rate the Alignment Criterion as a whole as Meets or Does Not Meet, based on the minimum number of points required. For the Alignment Criterion for language, materials must earn at least 4 of 6 points to align to the Shifts and major features of the Common Core State Standards. The more points the materials receive on the Alignment Criterion, the better the materials are aligned.

Evaluators should provide examples of evidence in support of the numerical rating for each metric, including evidence of any specific gaps in the materials.
Alignment Criterion 6
Language

**Metric**

**AC Metric 6A:**
At least 90% of language score points are derived from questions that focus on the specifics of the language Standards for the grade, assessing common errors and skills important for readiness.

If the above metric is met, assign the materials 2 points. If at least 50% of language score points are derived from questions that assess common student errors and focus on the conventions and strategies most important for readiness, assign 1 point.

**Procedure for Evaluation**

Questions focused on English conventions and writing strategies should represent common student errors (not artificial or unlikely mistakes).

Questions should focus on the conventions most important for college and career readiness as indicated by the Standards (see "Language Progressive Skills, by Grade" (http://www.corestandards.org/assets/CCSSI_ELA%20Standards.pdf)).

For each grade, examine either the language questions on the test form(s) or a representative sample (at least 15 language questions per grade) in the item bank.

List the sequence numbers of the questions that do not focus on the specifics of the Standards at each grade level or do not assess common errors.

Calculate percentages.

**Evidence**

**Rating**

- ☐ Meets (2)
- ☐ Partially Meets (1)
- ☐ Does Not Meet (0)
### Alignment Criterion 6

**Language**

<table>
<thead>
<tr>
<th>Metric</th>
<th>Procedure for Evaluation</th>
<th>Evidence</th>
</tr>
</thead>
</table>

**AC Metric 6B:**

At least 60% of language score points in the test blueprints are derived from students’ written responses and/or technology-enhanced items that mimic actual editing, mirroring real-world activity as closely as possible.

If the above metric is met, assign the materials 2 points. If at least 40% of language score points in the test blueprints are derived from actual writing and/or technology-enhanced items that mimic actual editing, assign 1 point.

Students should demonstrate language skills in the context of actual written composition, with use of conventions and writing strategies explicitly designated as part of the scoring rubric.

Alternately or in addition to actual writing, students should be asked to do editing or revision using technology-enhanced items that mimic actual editing and revision.

Using the list of items generated for Alignment Criterion 6A above, list the sequence numbers of the questions that do not mirror real-world activity.

Calculate percentages.

### Rating

- [ ] Meets (2)
- [ ] Partially Meets (1)
- [ ] Does Not Meet (0)
### Alignment Criterion 6

**Language**

**Metric**

AC Metric 6C:
Unless only reading and writing are being assessed, language skills questions comprise a sufficient part of ELA/literacy assessments—at least 8 score points per test (which is a generally accepted minimum for a reporting category).

If the above metric is met, assign the materials 2 points. If there are at least 6 language score points, assign 1 point.

**Procedure for Evaluation**

At each grade, each assessment should include a sufficient number of points for language skills so that language could be a reporting category. Providing a reporting category for language is desirable but is not required.

For each grade, examine either the test form(s) or the test blueprints.

Determine the number of test questions or score points devoted to language skills at each grade level.

Directions for Alignment Criterion 7
Speaking and Listening

Alignment Criterion 7: Test questions assessing speaking and listening reflect true communication skills required for college and career readiness.

Required Materials

- The test questions in the test forms for each grade level or (for an item bank) a representative sample of test questions
- Metadata accompanying the questions, showing the alignment of each to the CCSS
- Test blueprints and other explanatory material focused on test design, including sample score reports if available

Rating this Criterion

Rate the assessments for each of the metrics for this Alignment Criterion as Meets (2 points), Partially Meets (1 point), or Does Not Meet (0 points). Then rate the Alignment Criterion as a whole as Meets or Does Not Meet, based on the minimum number of points required. For the Alignment Criterion for speaking and listening, materials must earn at least 3 of 4 points to align to the Shifts and major features of the Common Core State Standards. The more points the materials receive on the Alignment Criterion, the better the materials are aligned.

Evaluators should provide examples of evidence in support of the numerical rating for each metric, including evidence of any specific gaps in the materials.

Alignment Criteria

Each Alignment Criterion relevant to the assessments evaluated must be met with a sufficient number of points in order for the Alignment Criteria to be labeled as “Meets” overall. If a particular domain is not intended to be part of the assessment, indicate N/A for that criterion. The more points the materials receive on the relevant alignment criteria, the better they are aligned.

Published v.2 2014 – send feedback to info@studentsachieve.net
Summary

If the materials meet both Non-Negotiables and relevant Alignment Criteria, they are aligned to the Shifts and major features of the CCSS.

Do the materials meet both Non-Negotiables and relevant Alignment Criteria?

☐ Yes
☐ No

What are the specific areas of strength and weakness based on this review?
Publishers or others modifying or developing assessments can use this information to make improvements and/or to remedy gaps in the alignment of assessment materials.
Indicators of Quality

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1 – 3, it is important to evaluate for overall quality and best practices. A starting list of Indicators of Quality is suggested below, including critical considerations such as accessibility for all students. States, districts and others evaluating assessment options are encouraged to add to this list to ensure materials respect curricular choices and reflect local contexts. These indicators are designed to apply to assessment programs; and similar indicators are reproduced in the Quality Criteria Checklists, which are used to evaluate individual passages and test questions.

Indicators of Quality for Assessment Programs

1. Assessments must provide accessibility to all students, including English learners and students with disabilities: The assessments should be developed in accordance with the principles of universal design and sound testing practice, so that the testing interface, whether paper- or technology-based, does not impede student performance. Allowable accommodations and modifications that maintain the constructs being assessed should be offered where appropriate.

2. Assessments should indicate progress toward college and career readiness: Scores and performance levels on assessments should be mapped to determinations of college and career readiness at the high school level, and for other grades, to being on track to college and career readiness by the time of high school graduation.

3. Assessments must be valid for required and intended purposes. As appropriate, assessments produce data, including student achievement data and student growth data, that can be used to validly inform individual student gains and performance and other purposes such as school effectiveness and improvement.

4. Assessments must be reliable: Assessments minimize error that may distort interpretations of results, describe the precision of the assessments at the cut scores, and are generalizable for the intended purposes.

5. Assessments should be designed and implemented to yield valid and consistent test score interpretations within and across years: Assessment forms yield consistent score meanings over time, forms within year, student groups, and delivery mechanisms (e.g., paper, computer, including multiple computer platforms), and score scales used facilitate accurate and meaningful inferences about test performance.
Indicators of Quality

Indicators of Quality for Texts Used in Reading Assessments

1. Excerpts should convey a sense of completeness: When texts are excerpts from a larger work, they should begin and end logically and maintain the intent of the original. Edits for length should be made at the beginning or end of the piece, rather than in patchwork fashion.

2. Introductory material should include only the most necessary information. When the texts are presented with introductory material, the introduction should avoid summarizing or explaining the meaning of the text or giving students answers to questions.

3. Illustrations should add value. When texts include visual elements, the elements should be related to the central ideas of the text and provide important additional information.

4. Texts should fall within an acceptable range of word count. All texts should fall within an acceptable range for word count at the indicated grade level.

5. Paired or multiple texts should have a clear and meaningful relationship with each other. When texts are paired, the potential points of comparison should be significant (not superficial), such as theme, amount and quality of evidence, differences in emphasis, distinguishable structures, changes to derivative text.

6. For tasks that simulate research, one text should serve as an “anchor” text. When research tasks are presented, the first text in the set should provide foundational knowledge and lead naturally to additional reading and exploration.
## Indicators of Quality for Test Questions

1. The language used in Reading items and Writing prompts should be clear and concise. The language in the items should reflect vocabulary and sentence structures appropriate to the grade level.

2. Selected-response items should be presented for review with rationales for all answer choices. The metadata for the selected-response items (multiple-choice or technology-enhanced) should provide a rationale for every answer option.

3. Selected-response items should exemplify high standards of technical quality. If items use a selected-response format, they should be free from internal clueing (e.g., the options should not repeat words in the stem; the grammatical relationship between stem and options should be correct for all options, the correct response should not be more specific than the options, the correct answer should not simply paraphrase words in the text). Also, the distractors should be plausible but incorrect (not unintended or arguable correct answers); general statements (e.g., central idea, theme, structure) should be precise and accurate; and inferences should be provable with specific textual evidence.

4. Constructed-response items should be presented for review with sample responses. The metadata for constructed-response items (brief and/or extended response) should provide a top score response or a sample response for every score point.

5. Constructed-response items should exemplify high standards of technical quality. If the items ask students to generate a written response, the description of the task should be clear enough that students know the characteristics of a successful response. Also, items that ask for a written response should be accompanied by information for students about the criteria for scoring.

6. Two-part items should exemplify high standards of technical quality. If items have two parts, the relationship between the two parts should be clear and logical, and there should be a plausible link between the options in the two parts.

7. Technology-enhanced items should exemplify high standards of technical quality. If items use computer delivery, they should use technology to approach the text in ways other item types cannot, providing value beyond that of non-technology-enhanced items. Also, the directions for use of technology should be clear and easy to follow.
Indicators of Quality

Indicators of Quality for Test Questions

8. Items that call for comparison or synthesis should focus on meaningful aspects of the texts. Questions that ask for comparison or synthesis should be related to central (rather than trivial) aspects of the text (e.g., amount and quality of evidence, differences in emphasis, distinguishable structures, changes to derivative text).

9. Graphic organizers used in items should be text-specific and add value. When items have graphic organizers or similar formats, the organizer should arise from characteristics of the text, i.e., it should not be a generic format that could apply to any text. The organizer or format should add value to the item by allowing students to demonstrate understanding of the text in a way that a traditional item would not.

Indicators of Quality for Sets of Test Questions

1. As a whole, a set of items should allow students to demonstrate deep understanding of the text. Sets of items should require students to read the full text carefully and show their understanding of the central ideas, allowing and requiring students to provide deep insights rather than skim the surface.

2. As a whole, a set of items should cover the Standards that arise naturally from the unique aspects of the text. Sets of items should address as many different Standards as appropriate, with items based on the individual characteristics of the texts rather than on a forced standard coverage design.

3. As a whole, a set of items should be ordered in a logical and helpful manner (unless item order cannot be fixed, i.e., the items are delivered in an adaptive system or are collected in an item bank). Sets of items should begin and/or end with general questions about the text; questions about particulars of the text should be presented in the order the particulars appear in the text.
Assessment Evaluation Tool (AET)

Mathematics, Grades K–12
Assessment Evaluation Tool
Mathematics, Grades K–12

This Math AET is designed to help educators determine whether assessments and sets of assessments are aligned to the Shifts and major features of the Common Core State Standards (CCSS). The substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) at the heart of the Common Core State Standards in mathematics are:

- **Focus**: strongly where the Standards focus
- **Coherence**: Think across grades and link to major topics within the grade
- **Rigor**: In major topics, pursue conceptual understanding, procedural skill and fluency, and application with equal intensity.

The AET draws directly from the following documents:

- Common Core State Standards for Mathematics (www.corestandards.org/Math)

When to use the AET

1. **Purchasing assessments**: Many factors go into local purchasing decisions. Alignment to the Standards is a critical factor to consider. This tool is designed to evaluate alignment of assessments and sets of assessments to the Shifts and the major features of the CCSS. It also provides suggestions of additional indicators to consider in the assessment evaluation and purchasing process.

2. **Evaluating assessments in use**: The AET can be used to analyze the degree of alignment of existing assessments and sets of assessments and help to highlight specific, concrete flaws in alignment. Even where assessments currently in use fail to meet one or more of these criteria, the pattern of failure is likely to be informative. States and districts can use the evaluation to create a thoughtful plan to modify assessments and sets of assessments in such a way that they better meet the requirements of the Standards.

3. **Developing assessments**: This tool can be used to provide guidance for and evaluation of alignment for creating locally developed assessments and sets of assessments. States and districts creating new aligned assessments and sets of assessments should use the criteria within the AET to guide the development of test blueprints, item specifications, and item review.

Who Uses the AET

The AET is designed for use by educators and administrators including content specialists, assessment specialists, administrators and educators at the school, district or state level. The AET is designed for use by educators and administrators including content specialists, assessment specialists, administrators and educators at the school, district or state level. Evaluating assessments and sets of assessments requires both subject-matter and technical expertise. Evaluators should be well versed in the Standards (www.corestandards.org/Math) for all grades in which assessments are being evaluated. This includes understanding the Major Work of the grade (www.achievethecore.org/focus) and the widely applicable pre-requisites in high school (www.achievethecore.org/prerequisites), the Supporting and Additional work, how the content fits into the progressions in the Standards (www.achievethecore.org/progressions), and the expectations of the Standards with respect to conceptual understanding, procedural skill and fluency, and application. Evaluators also should be familiar with the substantial instructional Shifts (http://www.corestandards.org/other-resources/key-shifts-in-mathematics/) of Focus, Coherence and Rigor that are listed above.
Getting Started

Prior to Evaluation

Assemble all of the materials necessary for the evaluation, e.g., test blueprints, item specifications, operational forms, test items, metadata for those items, score reports, etc. It is essential for evaluators to have materials for all grades covered by the assessment program, as some criteria cannot be rated without having access to each grade. In addition, each evaluator should have a reference copy of the Common Core State Standards for Mathematics and the Publishers’ Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013), and the Publishers’ Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).

Sections 1–3 below should be completed to produce a comprehensive picture of the alignment to the Shifts and major features of the CCSSM for the assessments under evaluation. Information about areas in need of improvement should be shared with internal and external stakeholders.

Navigating the Tool

Begin with Section 1: Non-Negotiable Alignment Criteria (p. 257)

• The Non-Negotiable Alignment Criteria must each be met in full for assessments to be considered aligned to the Shifts and the major features of the Common Core State Standards. Each Non-Negotiable Alignment Criterion has one or more metrics associated with it; every one of these metrics must be met in order for the criterion as a whole to be met.

• Examine the relevant assessments and use evidence to rate the materials against each criterion and its associated metric(s).

• Record and explain the evidence upon which the rating is based.

Continue to Section 2: Alignment Criteria (p. 267)

• The Alignment Criteria must each be met for assessments to be considered aligned to the Shifts and major features of the Common Core State Standards. Each Alignment Criterion has one or more metric associated with it; a specific number of these metrics must be met or partially met in order for the criterion as a whole to be met.

• Examine the assessments in relation to these criteria, assigning each metric a point value. Rate the criterion as “Meets” or “Does Not Meet” based on the number of points assigned. The more points the assessments receive on the Alignment Criteria, the better they are aligned.

• Record and explain the evidence upon which the rating is based.

Complete Section 3: Evaluation Summary (p. 287)

• Compile all of the results from Sections 1 and 2 to determine if the assessments are aligned to the Shifts and major features of the CCSS.

Proceed to Section 4: Indicators of Quality (p.289)

• Indicators of Quality are important considerations that will help evaluators better understand the overall quality of an assessment program. These considerations are not criteria for alignment to the CCSS, but they provide valuable information about additional program characteristics, such as ensuring accessibility for all students. Evaluators may want to add their own indicators to the examples provided.
Directions for Non-Negotiable 1
Focus on Major Work

Non-Negotiable 1: The large majority of points in each grade K–8 are devoted to the Major Work of the grade, and the majority of points in each high school course are devoted to widely applicable prerequisites.

Required Materials

- Test blueprints and operational forms
- “Focus by Grade Level” (achievethecore.org/focus) and the widely applicable prerequisites for postsecondary work (achievethecore.org/prerequisites).
- Common Core State Standards for Mathematics (corestandards.org/wp-content/uploads/Math_Standards.pdf)

Rating this Criterion

The metric will be rated as Meets or Does Not Meet/Insufficient Evidence. If the metrics is rated as Meets, then the assessments pass this Non-Negotiable. If the metric is rated as Meets, provide specific examples of evidence of this. If the assessment Does Not Meet the metric, include evidence of specific gaps found in the materials. If the materials provide Insufficient Evidence, explain what is missing from the materials or what within the materials is unclear.
Non-Negotiable 1
Focus on Major Work

Metric

NN Metric 1A:
For grades K–8, the assessment or set of assessments for each grade meet or exceed the following percentages:

- 85% or more of the total score points in the assessment(s) for each grade Kindergarten, 1, and 2 align exclusively to the Major Work of the grade.
- 75% or more of the total score points in the assessment(s) for each grade 3, 4, and 5 align exclusively to the Major Work of the grade.
- 65% or more of the total score points in the assessment(s) for each grade 6, 7, and 8 align exclusively to the Major Work of the grade.

For high school, the assessment or set of assessments for each course meet or exceed the following percentage:

- 50% or more of the total score points in each high school course assessment align to widely applicable prerequisites for postsecondary work.

Procedure for Evaluation

Familiarize yourself with the Major Work of the grade using the “Focus by Grade Level” documents and/or the widely applicable prerequisites using the “Widely Applicable Prerequisites” document.

Evaluate the blueprint or operational form(s) for each grade/course by counting the total number of points aligned to the Major Work of the grade or widely applicable prerequisites and divide by the total number of points on the test.

Evidence

Rating

☐ Meets
☐ Does Not Meet / Insufficient Evidence
Non-Negotiable 1
Focus on Major Work

Non-Negotiable 1: The large majority of points in each grade K–8 are devoted to the Major Work of the grade, and the majority of points in each high school course are devoted to widely applicable prerequisites.

Rating for Non-Negotiable 1

If metrics were rated as Meets, then rate Non-Negotiable 1 as Meets. If one or more metrics were rated as Does Not Meet, then rate Non-Negotiable 1 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Rating

☐ Meets
☐ Does Not Meet

Strengths / Weaknesses:

Before moving to Non-Negotiable 2, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 287.
Directions for Non-Negotiable 2
Freedom from Major Obstacles to Focus

Non-Negotiable 2: No item assesses topics directly or indirectly before they are introduced in the CCSSM.

Required Materials

- Common Core State Standards for Mathematics (corestandards.org/wp-content/uploads/Math_Standards.pdf)

- Item specifications and operational forms or a representative sample of at least 20 operational items per grade/course

- “Focus by Grade Level” (achievethecore.org/focus) and the widely applicable prerequisites for postsecondary work (achievethecore.org/prerequisites).

Rating this Criterion

The metric will be rated as Meets or Does Not Meet/Insufficient Evidence. If the metric is rated as Does Not Meet/Insufficient Evidence, then the assessments fail this Non-Negotiable. If the metrics is rated as Meets, then the assessments pass this Non-Negotiable.

If the metric is rated as Meets, provide specific examples of evidence of this. If the assessment Does Not Meet the metric, include evidence of specific gaps found in the materials. If the materials provide Insufficient Evidence, explain what is missing from the materials or what within the materials is unclear.
## Metric

**NN Metric 2A:**

100% of items on the assessment(s) assess knowledge of topics when they are introduced in the CCSSM.

Commonly misaligned topics include, but are not limited to:

- Probability, including chance, likely outcomes, probability models. (Introduced in the CCSSM in grade 7)

- Statistical distributions, including center, variation, clumping, outliers, mean, median, mode, range, quartiles; and statistical association or trends, including two-way tables, bivariate measurement data, scatter plots, trend line, line of best fit, correlation. (Introduced in the CCSSM in grades 6–8; see CCSSM for specific expectations by grade level.)

- Similarity, congruence, or geometric transformations. (Introduced in the CCSSM in grade 8)

- Symmetry of shapes, including line/ reflection symmetry, rotational symmetry. (Introduced in the CCSSM in grade 4)

## Procedure for Evaluation

Evaluate item specifications to see if content limits specify that the commonly misaligned topics listed in the metric are not assessed in grades prior to the grade introduced in the CCSSM.

Evaluate operational form(s) or a representative sample of at least 20 operational items per grade/course looking for commonly misaligned topics prior to the grade levels introduced by the CCSSM.

For context, read Criterion #2 in the Publishers’ Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

## Evidence

### Rating

- [ ] Meets
- [ ] Does Not Meet / Insufficient Evidence
Non-Negotiable 2
Freedom from Major Obstacles to Focus

Non-Negotiable 2: No item assesses topics directly or indirectly before they are introduced in the CCSSM.

Rating for Non-Negotiable 2

If the metric was rated as Meets, then rate Non-Negotiable 2 as Meets. If metric was rated as Does Not Meet, then rate Non-Negotiable 2 as Does Not Meet. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Rating

☐ Meets
☐ Does Not Meet

Strengths / Weaknesses:

Before moving to Non-Negotiable 3, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 287.
Directions for Non-Negotiable 3
Test Items Reflect the Coherence of the Standards

Non-Negotiable 3: Test items elicit direct, observable evidence of the degree to which a student can independently demonstrate the targeted Standard(s), reflecting the coherence of the CCSSM.

Required Materials

- Test blueprints and operational forms or a representative sample of at least 20 operational items per grade/course
- Metadata accompanying the items, showing the alignment of each question to the CCSS
- “Focus by Grade Level” (achievethecore.org/focus) and the widely applicable prerequisites for postsecondary work (achievethecore.org/prerequisites).

Rating this Criterion

Each metric will be rated as Meets or Does Not Meet/Insufficient Evidence. If any metric is rated as Does Not Meet/Insufficient Evidence, then the assessments fail this Non-Negotiable. If all metrics are rated as Meets, then the assessments pass this Non-Negotiable.

If the metric is rated as Meets, provide specific examples of evidence of this. If the assessment Does Not Meet the metric, include evidence of specific gaps found in the materials. If the materials provide Insufficient Evidence, explain what is missing from the materials or what within the materials is unclear.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Rating

☐ Meets
☐ Does Not Meet

Strengths / Weaknesses:

Before moving to Alignment Criterion 1, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 287.

Now continue by evaluating Alignment Criterion 1 for Rigor and Balance.
Directions for Alignment Criterion 1

Rigor and Balance

Alignment Criterion 1: The Standards set expectations for attention to all three aspects of rigor: conceptual understanding, procedural skill and fluency, and applications. Thus, assessments must reflect the balances in the Standards and help students meet the Standards’ rigorous expectations.

Required Materials

- Test blueprints and operational forms or a representative sample of at least 20 operational items per grade/course

Rating this Criterion

Each metric will be rated as Meets (2 points), Partially Meets (1 point) or Does Not Meet (0 points). The ratings on those metrics are combined to form a Meets/Does Not Meet judgment for each criterion as a whole based on the number of minimum points required for each criterion. In order for this Alignment Criterion to be rated as Meets, the materials must receive at least 5 out of 6 points. Each metric is important and therefore no individual metric can be rated as Does Not Meet for the materials to be considered aligned to the Shifts and major features of the CCSSM. The more points the materials receive on the Alignment Criterion, the better they are aligned.
Alignment Criterion 1
Rigor and Balance

Metric

AC Metric 1A: Balanced Assessment of Conceptual Understanding

Standards requiring conceptual understanding are explicitly listed in the blueprint(s) and assessed to ensure students have met these expectations.

(K–High School): At least 20% of the total points on the set of assessments for each grade or course explicitly require students to demonstrate conceptual understanding of key mathematical concepts, especially where called for in specific content Standards or cluster headings.

Procedure for Evaluation

Evaluate operational form(s) for each grade/course. Identify the items or parts of items that explicitly assess conceptual understanding, and add up those score points. Determine whether the sum represents at least 20% of the total points on the test. NOTE: Many of the items assessing these Standards should focus on conceptual understanding:

3.NF.A.1, 6.RP.A.2, 7.NS.A.1, A-REI.D.10

If operational form(s) are not available, this analysis may be done with test blueprints.

☐ Does Not Meet (0)
SECTION 4
Assessment Evaluation Tool (AET)
Mathematics, Grades K–12

Alignment Criterion 1
Rigor and Balance

Metric

AC Metric 1B: Balanced Assessment of Procedural Skill and Fluency

Standards requiring students to fluently compute are explicitly listed in the blueprint(s) and assessed to ensure students have met these expectations.

(K–High School): At least 20% of the total points on the set of assessments for each grade or course explicitly assess procedural skill and fluency.

Procedure for Evaluation

Evaluate operational form(s) for each grade/course. Identify the items that explicitly address fluency and/or procedural skill, and add the points for those items. Determine whether the sum represents at least 20% of the total points on the test. NOTE: These Standards should be assessed with an expectation for fluency at the appropriate grade level:

3.OA.C.7, 4.NBT.B.4, 5.NBT.B.5, 6.NS.B.2

If operational forms are not available, this analysis can be done with test blueprints.

☐ Does Not Meet (0)
Alignment Criterion 1
Rigor and Balance

Metric

AC Metric 1C: Balanced Assessment of Application

Standards requiring students to solve contextual problems are explicitly listed in the blueprint(s) and assessed to ensure students have met these expectations.

(K–5): At least 20% of the total points on the set of assessments for each grade explicitly assess solving single- or multi-step word problems.

(6–8): At least 25% of the total points on the set of assessments for each grade explicitly assess solving single- and multi-step word problems and simple models.

(+) High School): At least 30% of the total points on the set of assessments for each high school course explicitly assess single- and multi-step word problems, simple models, and substantial modeling/application problems.

Procedure for Evaluation

Evaluate the operational form(s) for each grade/course. Identify the items that explicitly address applications, and add the points for those items. Determine whether the sum represents at least 20% of the total points on the test. NOTE: Many of the items assessing these Standards should focus on application:

1.OA.A.2, 4.OA.A.3, 7.EE.B.3, A-REI.B.4

If operational forms are not available, this analysis can be done with test blueprints.

Directions for Alignment Criterion 2

Emphasize the Progressions

Alignment Criterion 2: Assessments reflect the grade-by-grade progressions in the Standards.

Required Materials

- Operational forms or a representative sample of at least 20 operational items per grade/course

Rating this Criterion

Meets (2 points), Partially Meets (1 point) or Does Not Meet (0 points). The ratings on those metrics are combined to form a Meets/Does Not Meet judgment for each criterion as a whole based on the number of minimum points required for each criterion. In order for this Alignment Criterion to be rated as Meets, the materials must receive at least 7 out of 8 points. Each metric is important and therefore no individual metric can be rated as Does Not Meet for the materials to be considered aligned to the Shifts and major features of the CCSSM. The more points the materials receive on the Alignment Criterion, the better they are aligned.
Alignment Criterion 2
Emphasize the Progressions

Metric

AC Metric 2A: Directly Reflect the Progressions
All, or nearly all, items exhibit alignment to the CCSSM for that grade or course by reflecting the progressions in the Standards. For example, multiplication and division items in grade 3 emphasize equal groups, with no rate problems (rate problems are grade 6 in CCSS).

Procedure for Evaluation
Evaluate operational form(s) for each grade/course or evaluate the same representative sample of operational items from Non-Negotiable 3A. Determine whether each item does or does not reflect the progressions. Count the number of items that do reflect the progressions to evaluate whether all or nearly all items reflect the progressions.

For context, read Criterion #5a in the Publishers’ Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013).

Rating

☐ Meets (2)
☐ Partially Meets (1)
☐ Does Not Meet (0)
Alignment Criterion 2
Emphasize the Progressions

Metric

AC Metric 2B: Assessing Basic Content

Assessments include questions, tasks, and prompts about the basic content of the grade or course that are no more difficult than the Standards require.

Procedure for Evaluation

Evaluate operational form(s) for each grade/course or evaluate the same representative sample of operational items from Non-Negotiable 3A. Approximately 25% of items should be as easy as possible and consistent with the requirement of the Standards (e.g., \( \frac{1}{2} + \frac{1}{3} \) is no more difficult than what 5.NF.A.1 requires).

Alignment Criterion 3
Standards for Mathematical Practice

Alignment Criterion 3: The Standards require mathematical practices to be connected with mathematical content. Thus, assessments should demonstrate authentic connections between content Standards and practice Standards.

Rating for Alignment Criterion 3

Materials must earn at least 5 out of 6 points to meet Alignment Criterion 3. If materials earn fewer than 5 points, the criterion has not been met. Check the final rating.

Then, briefly describe the strengths and weaknesses of these materials in light of this Criterion.

Before moving to Alignment Criteria 4, record the final Meets or Does Not Meet rating in the Evaluation Summary on Page 287.
Directions for Alignment Criterion 4

Supporting Focus

Alignment Criterion 4: The assessment program supports the focus of the Standards by connecting concepts and presenting score report information in a manner that highlights the emphasis of the grade or course.

Required Materials

- Test blueprints and operational forms or a representative sample of at least 20 operational items per grade/course
- Score reports or score report documentation

Rating this Criterion

Each metric will be rated as Meets (2 points), Partially Meets (1 point) or Does Not Meet (0 points). The ratings on those metrics are combined to form a Meets/Does Not Meet judgment for each criterion as a whole based on the number of minimum points required for each criterion. In order for this Alignment Criterion to be rated as Meets, the materials must receive at least 3 out of 4 points. Each metric is important and therefore no individual metric can be rated as Does Not Meet for the materials to be considered aligned to the Shifts and major features of the CCSSM. The more points the materials receive on the Alignment Criterion, the better they are aligned.
Alignment Criterion 4  
Supporting Focus

**Metric**

AC Metric 4A: Supporting Focus - Items

In grades K-8, assessment of Supporting Clusters enhances focus and coherence simultaneously by engaging students in the Major Work of the grade. In each grade, at least 50% of items aligned to Supporting Clusters simultaneously engage students in the Major Work of the grade.

In high school, assessments support focus by including items at a level of sophistication suitable to high school that involve application of knowledge and skills of key takeaways from grades 6-8.

**Procedure for Evaluation**

For grades K-8, examine at least 20 items aligned to Standards from Supporting Clusters for each grade and calculate the percentage of items sampled that simultaneously engage students in the Major Work of the grade.

For high school, examine operational forms for application items at a level of sophistication suitable to high school that involve key takeaways from grades 6-8.

For context, read Criterion #3 in the Publishers’ Criteria for the Common Core State Standards for Mathematics, Grades K–8 (Spring 2013) and Table 1 on Page 8 of the Publishers’ Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013), specifically the column titled “Applying Key Takeaways from Grades 6-8”.

Summary

If the materials meet every Non-Negotiable and Alignment Criterion, they are aligned to the Shifts and major features of the CCSS.

Do the materials meet every Non-Negotiable and Alignment Criteria?

☐ Yes

☐ No

What are the specific areas of strength and weakness based on this evaluation?
Publishers or those implementing assessment can use this information in order to make improvements and/or improve documentation to account for known gaps in the materials.
Indicators of Quality

Once an evaluation for alignment to the Shifts and major features of the CCSS has been conducted using Sections 1-3, it’s important to evaluate for overall quality and best practices. A starting list of Indicators of Quality is suggested below, including critical considerations such as accessibility for all students. States, districts and others evaluating assessment options are encouraged to add to this list to ensure materials respect curricular choices and reflect local contexts. These indicators are designed to apply to assessment programs; and similar indicators are reproduced in the Quality Criteria Checklists, which are used to evaluate individual test questions.

Indicators

1. Assessments must provide accessibility to all students, including English learners and students with disabilities: The assessments should be developed in accordance with the principles of universal design and sound testing practice, so that the testing interface, whether paper- or technology-based, does not impede student performance. Allowable accommodations and modifications that maintain the constructs being assessed should be offered where appropriate.

2. Assessments must be valid for required and intended purposes. As appropriate, assessments produce data, including student achievement data and student growth data that can be used to validly inform individual student gains and performance and other purposes such as school effectiveness and improvement.

3. Assessments must be reliable. Assessments minimize error that may distort interpretations of results, describe the precision of the assessments at the cut scores, and are generalizable for the intended purposes.

4. Assessments should be designed and implemented to yield valid and consistent test score interpretations within and across years. Assessment forms yield consistent score meanings over time, forms within year, student groups, and delivery mechanisms (e.g., paper, computer, including multiple computer platforms), and score scales used facilitate accurate and meaningful inferences about test performance.

5. Reflecting Strong Mathematical Content. The assessment items, answer keys, and supporting documentation are free from mathematical errors.

6. Constructing Forms Without Cueing Solution Processes. Item sequences do not cue the student to use a certain solution process during problem solving. Assessment(s) include problems requiring different types of solution processes within the same section.
Indicators of Quality

Indicators

7. Using Grade-Appropriate Presentation. The graphics, diagrams, and wording in each item are appropriate for students at that grade level.

8. Ensuring Forms Have Grade-Appropriate Reading Demands. The form as a whole (including directions, stimuli, items, etc.) has grade-appropriate readability levels.

9. Clear Scoring Materials and Procedures. For open-ended items, there are clear rubrics with exemplars that are valid for all possible solution paths. The procedure to use these materials to score student work is clear.

10. Calling for Variety in Student Work. Forms give many opportunities for students to produce a variety of responses. For example, items require students to produce answers and solutions, but also, in a grade-appropriate way, arguments and explanations, diagrams, mathematical models, etc. (Refer also to Criterion #9 in the Publishers’ Criteria for the Common Core State Standards for Mathematics, Grades K-8 (Spring 2013) and Criterion #7 in the Publishers’ Criteria for the Common Core State Standards for Mathematics, High School (Spring 2013).)

11. Utilizing a Variety of Ways to Present the Content. Items on operational forms present mathematical content in a variety of ways so that students must thoughtfully engage with various application contexts, mathematical representations, and structures of equations.

Assessment Passage & Item Quality Criteria Checklist

ELA/Literacy Quality Checklist for Assessment Texts Worth Reading

The following checklist has been designed to help evaluators of ELA/literacy assessments determine if texts used to assess Reading and/or Writing align to the Common Core State Standards (CCSS).

The checklist has been set up in a gated manner so that evaluators can quickly determine if or whether a text aligns to, or strays from, the expectations of the CCSS. If a text does not pass the criteria in Section 1 and cannot be moved to a different grade, the text should be removed from consideration. If a text does pass the criteria in Section 1 or passes by being moved to a different grade, the text should be evaluated against the additional criteria in Section 2.

Use the center column to explain each determination. Have the Common Core State Standards for ELA/Literacy open for continual reference. At the end of Section 2, rate the text as Accepted, Accepted Conditionally, or Rejected.

In this document, the word “text” refers to all kinds of stimuli used in Reading and Writing assessments, as appropriate, e.g., printed texts, video, audio, charts, graphs.
### Assessment Text Quality Criteria Checklist Section 1

For evaluation of individual texts and sets of texts: Each text must meet all of the following criteria. A text that does not pass the criteria in this section and cannot be moved to a different grade does not need to be evaluated further.

| 1.1 Quantitative measures of text complexity should determine grade-band placement: | Has the text been placed within the grade band indicated by a quantitative analysis (with the exception of some literary texts written in simple style)? Every text should be accompanied by specific evidence that it has been analyzed with at least one research-based quantitative tool for grade-band placement, with the exceptions of poetry and drama. If quantitative data is not available, evaluators should obtain a Lexile or other rating for the text (see http://achievethecore.org/text-complexity). Note that some literary texts, especially in high school, may be placed above the grade band indicated by quantitative data because of mature ideas and themes. | Rating:  
☐ Yes  
☐ No  
☐ Move (to grade ___ ) |

| 1.2 Qualitative analyses of text complexity should determine grade level placement: | Has the text been placed at the grade level indicated by a qualitative analysis? Every text should be accompanied by specific evidence that it has been analyzed with a qualitative measure for grade-level placement. If a qualitative analysis is not available, evaluators should use a tool that focuses on qualitative aspects of text complexity (see http://achievethecore.org/qualitative-text-analysis). | Rating:  
☐ Yes  
☐ No  
☐ Move (to grade ___ ) |
Assessment Text Quality Criteria
Checklist Section 1

Criteria

1.3 Text quality is fundamental to text selection:
Does the text represent professional-quality literary or informational writing?

Details

The text should demonstrate coherence, thorough development of ideas, clear use of evidence and details, and effective structure. A history/social studies or science/technical text, especially, should reflect the factual accuracy and quality of writing that is produced by authorities in the particular academic discipline. To meet quality requirements, the text will most likely be previously published. If the text was “commissioned,” evaluate it closely for richness of content and clarity of organization, as many commissioned texts are thin and diffuse.

Evidence

This requirement also applies to pairs or multiple texts; the Standards often have specific requirements for pairing texts.

Rating:

☐ Yes
☐ No
☐ Move (to grade ___)

NOTE: (“Move” is not an option; poor quality texts should never be used)

Assessment Text Quality Criteria
Checklist Section 2

SECTION 5
Quality Checklist for Assessment Texts Worth Reading
ELA/Literacy, Grades 3–12

Criteria

2.3 Illustrations must add value:
If a text includes visual elements, are they related to the central ideas of the text, and do they provide important additional information?

Details

If “No” is checked, suggest adding or deleting specific illustrations.

Evidence

2.4 Expository text structures are desirable for informational texts:
If an informational text uses chronological rather than expository structures, is there sufficient justification, in terms of quality and/or subject matter, for its use?

Details

If “No” is checked, suggest replacing the text with one that uses expository structures unless there is sufficient justification for its use.

Evidence

Rating:

☐ Yes
☐ No
☐ N/A
## Criteria

### 2.5 Each text must fall within an acceptable range of word count:

Does the text fall within an acceptable range for word count at the indicated grade level?

### Details

If “No” is checked, reject the text or suggest edits for length.

### Evidence

<table>
<thead>
<tr>
<th>Yes</th>
<th>No</th>
<th>N/A</th>
</tr>
</thead>
</table>

### Rating:

- [ ] Yes
- [ ] No
- [ ] N/A

### 2.6 Paired or multiple texts must have a clear and meaningful relationship with each other:

If texts are paired, are the potential points of comparison significant (not superficial), such as theme, amount and quality of evidence, differences in emphasis, distinguishable structures, changes to derivative text?

### Details

If “No” is checked, reject one or more of the texts and, if possible, make recommendations for replacements.

### Evidence

<table>
<thead>

- [ ] Accepted conditionally, with comments to be addressed
- [ ] Rejected
Assessment Passage & Item Quality Criteria Checklist

ELA/Literacy Quality Checklist for Assessment Questions Worth Asking

The following checklist has been designed to help evaluators of ELA/literacy assessments determine if individual test questions (items) in Reading and/or Writing assessments align to the Common Core State Standards (CCSS).

The checklist has been set up in a gated manner so that evaluators can quickly determine whether an item aligns to, or strays from, the expectations of the CCSS. If an item does not pass the applicable criteria in Section 1, the item should be removed from consideration. If an item does pass the applicable criteria in Section 1, it should be evaluated against the additional criteria in Section 2.

Use the center column to record each determination. Have the Common Core State Standards for ELA/Literacy open for continual reference. At the end of Section 2, the item can be marked as Accepted, Accepted Conditionally, or Rejected.

In this document, the word “item” refers to all formats of test questions.
Assessment Item Quality Criteria
Checklist Section 1

For evaluation of individual items and sets of items: Each item must meet all of the following criteria. An item that does not pass the criteria in this section does not need to be evaluated further.

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Details</th>
<th>Evidence</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.1 Reading test questions must be text-dependent, requiring analysis of text and use of evidence: If it is a Reading test question, does the item require close reading and careful analysis of the text—by asking for either direct or indirect use of textual evidence, as required by Reading Standard 1?</td>
<td>Every Reading item must require students to use evidence from the text either directly, by citing textual evidence, or indirectly, by relying on textual evidence to make a claim or inference.</td>
<td>Rating:</td>
</tr>
<tr>
<td>1.2 Writing prompts should be text-dependent, requiring analysis of text and use of evidence: If it is a Writing prompt, does the item require students to analyze text and provide textual evidence in their response, as required by Writing Standard 9?</td>
<td>If the prompt calls for narrative writing, this requirement can be marked as N/A; however, narrative prompts that do require textual analysis are more desirable than those that do not.</td>
<td>Rating:</td>
</tr>
</tbody>
</table>
### Criteria

| 1.3 Reading test questions and Writing prompts must be worthy of student attention: |
| Does the item focus on the central ideas or important particulars of the text, rather than insignificant or peripheral aspects? |

| 1.4 Reading test questions and Writing prompts must align to grade-level Standards: |
| Does the item genuinely (not superficially) align to the intent of the grade-level Standard(s) indicated in the item metadata? |

### Details

- **1.3 Reading test questions and Writing prompts must be worthy of student attention:**
  - Reading items and Writing prompts must allow students to deliver significant insights about the text.

- **1.4 Reading test questions and Writing prompts must align to grade-level Standards:**
  - Reading items must align to the intent of at least one Reading Standard (in addition to Standard 1), avoiding mere surface treatment of any Standard. Writing prompts must be designed to elicit one of the three types of writing named in Writing Standards 1, 2, and 3 (as well as aligning to Standard 9). A “blended” writing type is also aligned.

### Evidence

| Rating: |
| Yes | No |

| Rating: |
| Yes | No |
### Criteria

1.5 Items assessing vocabulary must focus on words and phrases that are important to central ideas in the text: If the test question is a Reading item or Writing prompt assessing vocabulary, does it assess a word or phrase that is important to understanding the central ideas of the text, giving students a “payoff” in gaining greater understanding the meaning of the text?

### Details

Items should avoid focusing on unusual words or turns of phrase that may stand out as interesting but do not advance an understanding of the text, nor should vocabulary items be “stand-alone” (e.g., based on a single phrase or sentence without any reading passage).

### Evidence

- **Rating:**
  - [ ] Yes
  - [ ] No
  - [ ] N/A

---

If the text has any “No’s” for any one of the applicable questions above, remove it from consideration. If the text has all “Yes” and appropriate “N/A’s,” proceed to Section 2.
Assessment Item Quality Criteria
Checklist Section 2

Items that pass the first section must next meet the following criteria, as applicable, possibly after revisions.

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Details</th>
<th>Evidence</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.1 Items must align to the Standards (see 1.5 above) but may require revisions in wording or in the Standards designated for alignment: Is the alignment of the item to Reading and/or Writing Standards as precise as possible?</td>
<td>If “No” is checked, suggest revisions in wording and/or a different alignment, or reject the item.</td>
<td>Rating: □ Yes □ No</td>
</tr>
<tr>
<td>2.2 The language used in Reading items and Writing prompts should be text-specific, as appropriate: Does the item use language specific to the text, avoiding generic or “canned” items that could be used with any text?</td>
<td>If “No” is checked, reject the item or suggest revisions unless the use of generic language is appropriate to the Standard being tested (e.g., “What is the central idea?”).</td>
<td>Rating: □ Yes □ No</td>
</tr>
<tr>
<td>2.3 The language used in Reading items and Writing prompts must be clear and concise: Will students readily understand the language in the item because it employs vocabulary and sentence structures appropriate to the grade level?</td>
<td>If “No” is checked, reject the item or suggest revisions.</td>
<td>Rating: □ Yes □ No</td>
</tr>
</tbody>
</table>
### Assessment Item Quality Criteria

## Assessment Item Quality Criteria Checklist Section 2

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Details</th>
<th>Rating</th>
</tr>
</thead>
</table>
| 2.5 Sets of items must provide deep and comprehensive coverage of the text: As a whole, does the set of items require students to read the full text carefully and show their understanding of the central ideas, allowing and requiring students to provide deep insights rather than skim the surface? | If “No” is checked, reject the set or suggest ideas for additional items. | Rating:  

☐ Yes  

☐ No |
| As a whole, does the set address as many different Standards as appropriate, with items based on the individual characteristics of the text rather than on a forced standard coverage? | If “No” is checked, reject the set or suggest ideas for addition or deletion of items. | Rating:  

☐ Yes  

☐ No |
| As a whole, is the set of items large and robust enough so that a test form is likely to have an appropriate balance between the number of texts and numbers of questions, giving students sufficient incentive to read closely and carefully? | If “No” is checked, reject the set or suggest ideas for additional items. | Rating:  

☐ Yes  

☐ No |
### Assessment Item Quality Criteria

**Checklist Section 2**

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Details</th>
<th>Rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>As a whole, is the set of items free from clueing (so that one item does not provide the correct answer for another)?</td>
<td>If “No” is checked, reject the set or suggest ideas for revisions.</td>
<td></td>
</tr>
</tbody>
</table>

**Rating:**

- [ ] Yes
- [ ] No

---

* Consider asking for a rationale for every answer option (MC and TE items) and a sample response for every score point (CR items). Providing rationales and sample responses is best practice in assessment development and tends to generate better quality items.

---

**Overall Rating for Checklist #2:**

- [ ] Accepted (all yes)
- [ ] Accepted conditionally, with comments to be addressed

Assessment Item Quality Criteria Checklists

Mathematics, Grades K–12
Assessment Item Quality
Criteria Checklist

Process for Evaluating Items for Common Core State Standards-Aligned Assessments

Step 1: Solve the item.

Step 2: Evaluate the item according to the criteria on the following page. The criteria are set-up in a gated manner so that evaluators can quickly and systematically determine whether an item aligns to, or strays from, the expectations of the CCSSM. Evaluators use the right column to record “Yes/No/Revised” or “Revised” as appropriate.

• “Yes”: the item meets the expectations of the criterion;

• “No”: the item does not meet the expectation of the criterion;

• “Revised”: the item, as it currently exists, does not meet the criterion, but could be revised to do so; and

• in the second section, check “N/A” if the criterion is not applicable to the item.

Use the center column to explain your determination using evidence.

Have the Common Core State Standards for Mathematics open for continual reference.
### Criteria for Evaluating Items for Common Core State Standards-Aligned Assessments

**SECTION 5**
Assessment Item Quality Criteria Checklist
Mathematics, Grades K–12

---

**Evaluator has solved the item**

---

**Section 1: The item must meet all of the following to be considered further.**

<table>
<thead>
<tr>
<th>Item / Task</th>
<th>Evidence</th>
<th>Rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>1A Alignment: Is the item directly and accurately aligned to the assessment target and Standard(s) indicated, including the Standards for Mathematical Practice(s) listed?</td>
<td>[ ] Yes [ ] No</td>
<td>[ ] Revised</td>
</tr>
<tr>
<td>1B Correctness: Is the item mathematically correct, including at least one appropriate solution and accurate use of mathematical vocabulary and symbols?</td>
<td>[ ] Yes [ ] No</td>
<td>[ ] Revised</td>
</tr>
<tr>
<td>1C Rationales and/or Top-Score Response: For a selected-response item (SR), are high-quality rationales (aligned to the assessment targets and Standard(s)) provided for the correct answer and each distractor? For a constructed-response item (CR), is a top-score response provided?</td>
<td>[ ] Yes [ ] No</td>
<td>[ ] Revised</td>
</tr>
<tr>
<td>1D Grade Appropriateness: Does the item reflect the coherence of the Standards by using appropriate mathematical vocabulary, numbers, and symbols for the grade or course?</td>
<td>[ ] Yes [ ] No</td>
<td>[ ] Revised</td>
</tr>
</tbody>
</table>

If the item does not meet all of the criteria above and cannot be revised to do so, remove the item from consideration. Otherwise, proceed to the second section.
### Section 2: Items that pass the first gate must next meet the following criteria, possibly after revision.

#### 2A Linguistic Clarity:

Is the written text of an item clear, unambiguous, and appropriate for the grade level with no construct-irrelevant linguistic complexity (e.g., negative phrasings, complex sentence structures)?

<table>
<thead>
<tr>
<th>Evidence</th>
<th>Rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ ] Yes</td>
<td>[ ] Revised</td>
</tr>
<tr>
<td>[ ] No</td>
<td>[ ] N/A</td>
</tr>
</tbody>
</table>

#### 2B Technical Quality:

Does the item clearly communicate the expectation, preclude guessing, and refrain from clueing a student’s response strategy?

<table>
<thead>
<tr>
<th>Evidence</th>
<th>Rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ ] Yes</td>
<td>[ ] Revised</td>
</tr>
<tr>
<td>[ ] No</td>
<td>[ ] N/A</td>
</tr>
</tbody>
</table>

#### 2C Accessibility:

Is the item accessible, reflecting Universal Design for Learning (UDL) principles to maximize accessibility for ELL students and students with disabilities?

<table>
<thead>

Additional Resources for Evaluating Alignment of Instructional Materials

Achieve Open Educational Resource Rubrics
Qualitative Measures Rubric for Informational Text and Qualitative Measures for Literature
CCSS Grade Bands and Quantitative Measure
Illustrative Mathematics Task Review Tool
Additional Resources for Evaluating Alignment of Instructional Materials

Achieve Open Educational Resource (OER) Rubrics

Open Educational Resources (OER) are instructional materials, often in a digital and online format, that contain an open copyright license that allows educators to share, reuse and edit these materials. The OER Rubrics can be used in developing or evaluating OER to help determine the degree of alignment of OER to the CCSS, and to determine aspects of quality of OER. OER range from a single lesson or instructional support material (such as a problem set or game) to a complete unit or set of support materials.

To view and download, please visit: http://www.achieve.org/oer-rubrics

Qualitative Measures Rubric for Informational Text and Qualitative Measures Rubric for Literature

Developed by the Council of Chief State School Officer’s English Language Arts state collaborative to support qualitative analysis of what makes a given text complex, these qualitative rubrics guide educators in measuring features of text complexity, such as: text, structure, language clarity and conventions, knowledge demands, and levels of meaning and purpose.

To view and download, please visit: http://achievethecore.org/qualitative-measures or www.ccsso.org/textcomplexity

CCSS Grade Bands and Quantitative Measures

A step-by-step guide to accessing free, online tools that identify the appropriate grade band for a text.

To view and download, please visit: www.achievethecore.org/quantitive-measures

Illustrative Mathematics Task Review Tool

The Illustrative Mathematics task review criteria are used to evaluate K–12 mathematics tasks designed specifically to illustrate the CCSSM and intended for inclusion on the Illustrative mathematics website (http://www.illustrativemathematics.org/). Each task is intended to be part of a highly crafted set that illustrates the breadth, depth and nuances of each standard, cluster, domain, grade level, or conceptual category in the standards. In order to be published at Illustrative Mathematics, a task must meet all eight criteria described in the review form.

Appendix: The Publishers’ Criteria for the Common Core State Standards

319   ELA/Literacy, Grades K–2
329   ELA/Literacy, Grades 3–12
349   Mathematics, Grades K–8
372   Mathematics, High School
Appendix: The Publishers’ Criteria for the Common Core State Standards

ELA/Literacy, Grades K–2
In kindergarten through the second grade, the focus is on developing foundational reading skills and knowledge that are essential for future learning. The criteria for publishers are designed to help ensure that students are prepared for more advanced reading levels by the end of second grade. These guidelines are not intended to dictate classroom practice but rather to help ensure that teaching and learning are aligned with the standards. The criteria are intended to guide publishers and curriculum developers as they work to strengthen existing programs and develop new ones. The criteria are based on the most significant elements of the Common Core State Standards for kindergarten through second grade.

The criteria articulate the beliefs that reading — learning to read, vocabulary development, and the knowledge gained in these early years — is central to all other academic learning. In the early grades, this includes thorough attention to the foundational elements of reading instruction. While these criteria begin with the foundational skills, they are not an end in themselves but rather necessary and important components of an effective, comprehensive reading program designed to develop and improve students' reading skills. The criteria articulate the most significant elements of the Common Core State Standards for literacy in kindergarten through second grade and lay out their implications for aligning materials with the standards.
and a requirement that students encounter sufficiently complex text through listening even while they are learning how to read and write. The standards provide a coherent approach to reading comprehension in the early years built on anchor standards that extend into third through twelfth grade learning. Finally, the standards cultivate a wide range of writing including narrative expression of experiences real and imagined as well as sharing information and opinions.

DOCUMENT ORGANIZATION

I. Key Criteria for Reading Foundations

II. Key Criteria for Text Selections

III. Key Criteria for Questions and Tasks

This document has three parts: The first articulates criteria that should guide the teaching of reading foundations, the second details the criteria that should guide the selection of texts for reading foundations, and the third outlines criteria for the development of high-quality, fully integrated materials that provide linear, cumulative skill progression and practice with text-dependent questions and tasks, leading to fluent, independent reading for meaning.
The Common Core State Standards offer specific guidance on reading foundations that should be incorporated into curriculum materials so that students will be well on their way to decoding automatically and reading with fluency by the time they finish second grade. While progress in fluency with more complex text should continue throughout third grade and beyond, decoding automatization and reading with fluency by the time they finish second grade while being incorporated into curriculum materials so that students will be well on their way to fluency requires the full range of foundational reading skills.

1. **Materials provide ample opportunities for students to understand and fully learn the spelling/sound patterns necessary to become successful readers.**

   - **Materials allow for flexibility in meeting the needs of a wide range of students.** Students come to school unevenly prepared to read. While the primary purpose of a beginning reading instruction program is to ensure that all students learn how to read, some students will move ahead quickly and should be able to move on once they have demonstrated mastery of the basic content. Adjustments should be made to programs now in use to recognize current and met, or moving on without allowing students to move on until they have demonstrated mastery of the basic content. Additionally, adjustments should be made to programs now in use to recognize current and met, or moving on until they have demonstrated mastery of the basic content. 

2. **Materials include effective instruction for all aspects of foundational reading (including distributed practice).**

   - **Materials that are aligned to the standards should provide explicit and systematic instruction and diagnostic support in concepts of print, phonological awareness, phonics, vocabulary development, and fluency.** These foundational skills are necessary and central components of effective, comprehensive reading instruction. 

The Common Core State Standards for Mathematics and ELA and literacy curricula, Grades K-2
3. Materials focus on academic vocabulary prevalent in complex texts throughout reading.

4. Teacher support for fluency instruction should explicitly recognize that reading rates vary.

5. Fluency is a particular focus instructional materials.
1. All students (including those who are behind) have extensive opportunities to encounter grade-level text. For cohort students who have fallen behind, this is the critical skill needed for success in school and life. Beginning in grade 2, reading standards 1-2 outline the band level of text complexity at which students need to demonstrate comprehension.

Activity 11: Key Criteria for Text Selections

- Texts for each grade align with the requirements outlined in the standards.
- Texts for each grade align with the requirements outlined in the standards.
- The Common Core State Standards hinge on students encountering appropriate texts at each grade level.
- The Common Core State Standards hinge on students encountering appropriate texts at each grade level.
- Beginning in grade 2, Reading Standard 1 outlines the text complexity students need to demonstrate.
- The criteria recommended below emphasize the need for meaningful information or narrative content with which to develop students’ comprehension.
- The criteria recommended below emphasize the need for meaningful information or narrative content with which to develop students’ comprehension.
- The Common Core State Standards strongly point to the necessity of teaching students how to read with texts that are written to facilitate accurate, independent, confident reading, and the consolidation of basic reading skills.
- The Common Core State Standards strongly point to the necessity of teaching students how to read with texts that are written to facilitate accurate, independent, confident reading, and the consolidation of basic reading skills.

2. Activities used for assessment should clearly denote what standards are being emphasized, and materials should offer frequent and easily implemented assessments.

Materials offer assessment opportunities that measure progress in the foundations of reading.
complex texts rather than the instruction they need in the foundational skills in reading as well as vocabulary and other supports they need to read at an appropriate level of complexity. Complex text, whether accessed through individual reading or as a group, is rich and accessible to even first and second grades. Complex text contains more sophisticated academic vocabulary, lends itself to more complex tasks, and is able to support rich dialogue.

4. Text sections are worth reading and re-reading. The standards call for extended curriculum time to include equal measures of literary and informational text. The standards call for extended curriculum time to include equal measures of literary and informational text. (For samples of appropriate quality of selection, see Appendix B of the Common Core State Standards.)

5. Additional materials aim to increase the regular independent reading of texts that appeal to students’ interests while elaborating on their knowledge base and joy in learning. These materials should ensure that all students have daily opportunities to read.
High-quality text-dependent questions are more than text-specific rather than generic. They require students to think carefully and find evidence in the text itself to support the response. Discussion tasks following readings should draw on a full range of insights and knowledge contained in the text in terms of both content and language. Student background knowledge and experiences can illuminate the reading but should not replace attention to the text itself. Questions and tasks cultivate students' abilities to ask and answer questions based on the text.

### III. Key Criteria for Questions and Tasks

**Literature**

Of students' interests, these materials should include informational texts as well as those that have a specific purpose for reading. In alignment with the standards, materials should develop students' understanding of the range of nonfiction reading and writing. Classrooms focus on reading, thinking, and writing to support school curriculum." Though high-quality text-dependent questions are needed to include texts at students' own grade levels, teachers should also ensure that materials provide opportunities to develop a wide range of materials on a variety of topics and genres, both in school settings. Students need access to a wide range of materials with a variety of texts that they can choose from during and outside of the school day.
Materials provide opportunities for students to build knowledge through close reading.

2. Reading strategies support comprehension of specific texts and the focus on building knowledge.

- Provide reading and gathering knowledge from specific texts should be at the heart of classroom activities and not confined to the margins when completing other than end into the marginal. 

Materials: Close reading and gathering knowledge from specific texts should be at the heart of classroom activities and not confined to the margins when completing other than end into the marginal. 

Reading strategies should be included and scaffolded so that they boost students who are especially challenged by the complex text before them. 

Students’ initial exposure to a text should often engage them directly with the text so they can practice independent reading. 

Students’ initial exposure to a text should often engage them directly with the text so they can practice independent reading. 

When necessary, extra textual scaffolding prior to and during the first read should focus on into vocabulary or other properties.

When necessary, extra textual scaffolding prior to and during the first read should focus on into vocabulary or other properties.

3. Scaffolds enable all students to experience rather than avoid the complexity of the text.

- Close reading and gathering knowledge from specific texts should be at the heart of classroom activities and not confined to the margins when completing other than end into the marginal. 

Materials: Close reading and gathering knowledge from specific texts should be at the heart of classroom activities and not confined to the margins when completing other than end into the marginal. 

Reading strategies should work in the service of reading comprehension.

4. Scaffolds enable all students to experience rather than avoid the complexity of the text.
CONCLUSION: TRANSPARENT RESEARCH AND PRACTICE BASE

Curriculum materials must also have a clear and documented research base. Curriculum offered as a whole range of Common Core State Standards, and the research base produced should include evidence of its adaptability and efficacy with a full range of students, including English language learners. Curriculum that already have a research base should build on that base by continuing to monitor their efficacy and expand upon their strengths.

The results of the research, however, need to be clear and understandable. Without clear and transparent research and practice bases, students may struggle to understand the material and may feel disconnected from the content. Curriculum materials should be designed to engage students and provide clear and consistent instruction. Teachers should be provided with detailed guidance and support to effectively implement these materials.

5. New challenging ideas exist within confidence and stamina.

Reading passages are designed to develop confidence and stamina, and challenge students with new and diverse ideas. The goal is to help students build their confidence and stamina, and to encourage them to think critically and creatively.

6. Materials offer assessment opportunities that accurately measure progress.

Assessment opportunities should be included in materials to provide feedback to both teachers and students. Materials should offer frequent and easily implemented assessments, including systems for record-keeping and follow-up.

7. Writing opportunities for students are prominent and varied.

Writing opportunities for students should be prominent and varied. These opportunities should include both opportunities for students to communicate their thinking and explore their ideas, as well as opportunities for students to engage in more complex forms of writing, such as narratives, persuasive writing, and informational writing.

Conclusion: Transparent Research and Practice Base

Curriculum materials must also have a clear and documented research base. Curriculum offered as an excellent match for the Common Core State Standards should produce evidence of its adaptability and efficacy with a full range of students, including English language learners. In all materials, curriculum materials must also have a clear and documented research base.
Appendix: The Publishers’ Criteria for the Common Core State Standards

ELA/Literacy, Grades 3–12
INTRODUCTION

Developed by two of the lead authors of the Common Core State Standards and revised through conversations with teachers, researchers, and other stakeholders, these criteria are designed to guide publishers and curriculum developers as they work to ensure alignment with the Common Core State Standards in English language arts (ELA) and history/social studies, science, and technical subjects.

The criteria make plain that developing students’ proficiency in reading science and history texts is just as important as it is for all students. Knowledge in reading science and history texts is central to the common expectation of knowledge which the link between comprehension and acquisition of text and expectation of knowledge. While the link between comprehension and acquisition of text and expectation of knowledge is relatively straightforward in English language arts, it is more complex in science due to the nature of scientific inquiry.

At the heart of these criteria are instructions for shifting the focus of literacy instruction to center around the texts that students read and the kinds of questions students should address as they read texts of adequate range and complexity. These criteria outline below the three focuses for reading and writing in each grade band.

1. Extraordinary Range of Texts: At each grade level, publishers and curriculum developers should work to ensure that the texts students are reading are of adequate range and complexity. These criteria outline the kinds of texts that should be included at each grade level and the kinds of questions that students should be able to read and write about them.

2. Focus on Textual Evidence: The criteria make plain that developing students’ proficiency in reading science and history texts is just as important as it is for all students. Knowledge in reading science and history texts is central to the common expectation of knowledge which the link between comprehension and acquisition of text and expectation of knowledge is relatively straightforward in English language arts, it is more complex in science due to the nature of scientific inquiry.

3. Language that Points to Evidence: The criteria make plain that developing students’ proficiency in reading science and history texts is just as important as it is for all students. Knowledge in reading science and history texts is central to the common expectation of knowledge which the link between comprehension and acquisition of text and expectation of knowledge is relatively straightforward in English language arts, it is more complex in science due to the nature of scientific inquiry.

These criteria are intended to guide publishers and curriculum developers to be purposeful and strategic in both what to include and what to exclude in instructional materials. By underscoring what matters most in the standards, the criteria illustrate instructional materials that are designed to develop students’ proficiency in reading science and history texts. The criteria make plain that developing students’ proficiency in reading science and history texts is just as important as it is for all students. Knowledge in reading science and history texts is central to the common expectation of knowledge which the link between comprehension and acquisition of text and expectation of knowledge is relatively straightforward in English language arts, it is more complex in science due to the nature of scientific inquiry.

The National Governors Association and the Council of Chief State School Officers are the product of a state-led effort — coordinated by the National Governors Association Center for Best Practices and the Council of Chief State School Officers — to develop a consistent, clear understanding of college and career readiness. The Common Core State Standards, the result of these conversations with teachers, researchers, and other stakeholders, were developed by two of the lead authors of the Common Core State Standards and revised through conversations with teachers, researchers, and other stakeholders, these criteria are designed to guide publishers and curriculum developers as they work to ensure alignment with the Common Core State Standards in English language arts (ELA) and history/social studies, science, and technical subjects.
This document contains two parts: The first articulates criteria for ELA materials in Grades 3–12 and the second for history/social studies, science, and technical materials in Grades 6–12. Each part contains sections discussing the following Key Criteria:

I. Key Criteria for Writing to Sources and Research
II. Key Criteria for Academic Vocabulary
III. Key Criteria for Questions and Tasks
IV. Key Criteria for Text Selection
V. Additional Key Criteria for Student Reading, Writing, Listening, and Speaking

The criteria for ELA materials in Grades 3–12 have one additional section:
Key Criteria for Text Selection

1. Text Complexity: The Common Core State Standards require students to read increasingly complex texts. The Common Core State Standards outline expectations for measuring text complexity and provide guidance on selecting appropriate texts.

A. Texts for Grade 12

- Texts should align with the complexity requirements outlined in the standards.

B. All Students (Including Those Who Are Behind) Have Extensive Opportunities to Encounter Grade-Level Complex Text

- Teachers have the flexibility to build progressions of increasingly complex texts within grade-level bands that overlap to a limited degree with earlier bands (e.g., Grades 4–5 and Grades 6–8).

- Teachers should provide opportunities for all students in a classroom to engage with complex texts, although students whose reading ability is developing at a slower rate also need supplementary opportunities to read texts they can comprehend with guidance and support. Students who need additional assistance with fluency practice and vocabulary building are those who need more scaffolding to access complex texts. Teachers can use language support, texts aligned to the Common Core State Standards, and other resources to help students develop the knowledge and skills needed to read complex texts.

- Some percentage of students will enter Grade 3 or later grades without a command of foundational reading skills such as decoding, and even knowledge of both words and the words. In skilled classrooms, students are receiving support to help them read more deeply, think deeply about texts, participate in thoughtful discussions, and gain knowledge of both words and the world.

- Instruction that classifies as recession to help them read more deeply, think deeply about texts, participate in thoughtful discussions, and gain knowledge of both words and the world.

A. Working Group has developed clear, common standards for measuring text complexity that require students to read increasingly complex texts with growing independence as they progress toward career and college readiness.

B. All Students (Including Those Who Are Behind) Have Extensive Opportunities to Encounter Grade-Level Complex Text

- Far too often, students who have fallen behind are only given less complex texts rather than the support they need to read texts at the appropriate level of complexity. Curriculum materials should provide extensive opportunities for all students in a classroom to engage with complex texts, although students whose reading ability is developing at a slower rate also need supplementary opportunities to read texts they can comprehend with guidance and support. Students who need additional assistance with fluency practice and vocabulary building are those who need more scaffolding to access complex texts. Teachers can use language support, texts aligned to the Common Core State Standards, and other resources to help students develop the knowledge and skills needed to read complex texts.

- Some percentage of students will enter Grade 3 or later grades without a command of foundational reading skills such as decoding. It is essential for these students to have strategies and supports in place to help them develop the skills needed to read increasingly complex texts with growing independence as they progress toward career and college readiness.

A. Working Group has developed clear, common standards for measuring text complexity that require students to read increasingly complex texts with growing independence as they progress toward career and college readiness.
2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.

2. **Range and Quality of Texts:** The Common Core State Standards require a greater focus on informational text in elementary school and literary nonfiction in ELA classes in Grades 6–

magazine articles as well as information-rich websites.
A. In grades 3–5, literacy programs shift the balance of texts and instructional time to include equal measures of literary and informational texts. The standards call for elementary curriculum materials to be recalibrated to reflect a mix of 50 percent literary and 50 percent informational texts, including reading in ELA, science, social studies in history/social studies, science, and the arts. Achieving the appropriate balance between literary and informational texts in the next generation of materials requires a significant shift in early literacy materials and instructional time so that these genres receive equal time and weight in the daily schedule. The Common Core State Standards for English Language Arts emphasize arguments (such as those in the U.S. foundational documents) and other literary nonfiction that is built on informational text structures rather than the best of nonfiction written for a broad audience on a wide variety of topics, such as those in the 5–12 foundational documents (see p. 25). Literary nonfiction emphasizes argument and evidence to build on long-standing reading and writing traditions of civic engagement and the importance of research. The Common Core State Standards for English Language Arts ELA programs shift the balance of texts and instructional time towards substantially more literary nonfiction. To become career and college ready, students must grapple with a range of works that extend the standards and develop analytical, interpretive, and argumentative skills. This requires a change in how information and literary nonfiction are taught in grades 6–12 to include a blend of source materials that require students to read and integrate a larger volume of material for research and to develop argumentative and interpretive skills. The standards emphasize the importance of close reading and careful re-reading for understanding. To be career and college ready, students must be capable of reading and understanding a wide range of texts and source materials. The standards provide several examples of high-quality literary nonfiction that is built on informational text structures rather than the best of nonfiction written for a broad audience on a wide variety of topics. These examples include "The Human Body," "The Environment," and "The Constitution."
D. Specific texts or text types named in the standards are included.

"At" specific points, the Common Core State Standards require certain texts or types of texts. In grades 9–12, foundational documents from American history, selections from American literature and world literature, a play by Shakespeare, and an American drama are all literature that students ought to know. Other documents from American history, selections from American literature, and texts that are representative of diverse cultures are also required. In early grades, students are encouraged to study classic myths and stories, including works representing diverse cultures. Additionally, materials for Grades 3–12 should set out a coherent selection and sequence of texts for instruction.

E. Specific texts on text types named in the standards are included.

High-quality text-dependent questions are more often text-specific rather than text-related to support responses. Text-dependent questions require careful scrutiny of the text and specific reference to evidence from the text. From the text itself, they establish what follows and what does not follow from the text itself.

F. Text-dependent questions do not require information or evidence from outside the text. In early grades, students are required to study classic myths and stories, including works representing diverse cultures. Additionally, materials for Grades 3–12 should set out a coherent selection and sequence of texts for instruction.

G. A significant percentage of tasks and questions are text-dependent.

Among the highest priorities of the Common Core State Standards is that students be able to read closely and gain knowledge from texts.

A. A significant percentage of tasks and questions are text-dependent.

The standards strongly focus on students gathering evidence, knowledge, and insight from what they read and therefore require that a majority of the questions and tasks that students ask and respond to be based on the text under consideration. Rigorous text-dependent questions require students to demonstrate that they not only can follow the details of what is explicitly stated but also are able to make valid claims that follow from the text. Dependent questions require students to demonstrate that they not only can follow the text but also can make valid claims that square with all the evidence in the text. The details of what is explicitly stated but also are able to make valid claims that follow from the text. Eighty to ninety percent of the Reading Standards in each grade require text-dependent analysis; accordingly, aligned curriculum materials should have a similar percentage of text-dependent questions. When examining a complex text in depth, text-dependent questions should be developed to address the specific standards.

II. Key Criteria for Questions and Tasks

1. High-Quality Text-Dependent Questions and Tasks: Among the highest priorities of the Common Core State Standards is that students be able to read closely and gain knowledge from texts.

Within a sequence or collection of texts, specific anchor texts are selected for especially carefully reading. After reading and reexamination of anchor texts, other texts are selected for careful study. The anchor texts provide essential opportunities for students to spend time and effort reading and reexamination of anchor texts, other texts are selected for careful study. After reading and reexamination of anchor texts, other texts are selected for careful study.

2. Key Criteria for Questions and Tasks

well read a specific source in depth.

Beyond the anchor texts that enable students to demonstrate that they can read widely as a specific source, the additional research sources can read widely as a specific source.

Furthermore, the anchor texts (or anchor texts) that make careful study possible to explore a particular text is essential that such materials include a selected text or set of texts that can act as cornerstones and anchors to engage students to attend to the particular dimensions, ideas, and specifics that illuminate each text. Though there is a productive role for good general questions in each text.

High-quality text-dependent questions are more often text-specific rather than text-related to support responses. Text-dependent questions require careful scrutiny of the text and specific reference to evidence from the text itself. From the text itself, they establish what follows and what does not follow from the text itself.

High-quality text-dependent questions are more often text-specific rather than text-related to support responses. Text-dependent questions require careful scrutiny of the text and specific reference to evidence from the text itself. From the text itself, they establish what follows and what does not follow from the text itself.

translating its contents for students or telling students what they are going to learn in
state standards. However, the scaffolding should not prevent or replace the text by
enabling them to read at the level of text complexity required by the Common Core
— “text.” Many students will need careful instruction—including specific scaffolding
A. Scaffold all students to experience rather than avoid the complexity of the
their independent capacity to read at the appropriate level of complexity and depth.
The Common Core State Standards is a requirement that students be able to demonstrate

2. Cultivating Students’ Ability to Read Complex Texts Independently:

A. Scaffolds enable all students to experience rather than avoid the complexity of the
nonfiction at its fullest form to attend to issues of style.

2. Questions and tasks attend to analyzing the arguments and information at the heart
of specific texts.

3. Materials provide opportunities for students to build knowledge through close
reading of specific texts.

— Just as texts should be worth reading, so should questions be worth answering.
B. Reading strategies support comprehension of specific texts and the focus on building knowledge and insight. Close reading and questioning can build on students’ prior knowledge of the text. When responding to questions, teachers should encourage students to use evidence from the text to support their answers. This helps students to develop a deeper understanding of the material and to build on their prior knowledge. When working with a small group, teachers can use questions to focus students on key themes and concepts, helping them to develop a more nuanced understanding of the text. When working with the whole group, teachers can use questions to engage students in discussions about the text, encouraging them to share their thoughts and ideas. This helps to build a collaborative learning environment where students can learn from each other and develop their own understanding of the text.
Materials focus on academic vocabulary prevalent in complex texts throughout reading.

II. Key Criteria for Academic Vocabulary

A. Follow-up questions and tasks require careful comprehension of the text before asking for further evaluation or interpretation.

- Questions of interpretation should be concrete and specific, following the details and specific ideas in the text. The text should be the focus of instruction, and all materials should be reflective of instruction materials.

- Instruction materials should be designed to provide scaffolding but also gradually remove those supports as students demonstrate that they have followed the details and logic of an argument. Questions that require students to demonstrate a careful understanding of what they read before asking for further evaluation or interpretation, should be conveyed in a careful underlining of the text. The Common Core State Standards call for further evaluation or interpretation.

B. Questions and tasks are aligned with assessment opportunities that genuinely measure progress.

- Aligned materials should guide teachers to provide scaffolding but also gradually remove those supports by including tasks that require students to demonstrate their independent capacity to read and write in every domain at the appropriate level of complexity and sophistication. Activities used for assessment should clearly denote what standards and texts are being emphasized, and materials should offer frequent opportunities for students to work independently on analyzing grade-level text because this independent analysis is required by the standards.

- Instructional materials should be designed to devote sufficient time in class to students encountering text without scaffolding, as they often will in college and career-ready environments. Alsoc-read environments should be devoted to devote sufficient time in class to students encountering text without scaffolding, as they often will in college and career-ready environments. Instructional materials should provide effective ongoing prompts for students to analyze texts in writing.

C. Materials make the text the focus of instruction by avoiding features that distract from the text.

- Teachers’ guides or students’ editions of curriculum materials should highlight the reading selections. Everything included in the surrounding materials should be thoughtfully considered and justified before being included. The text should be central, and surrounding materials should be included only when necessary, so as not to distract from the text itself. Instructional support materials should focus on questions that engage students in becoming interested in the text. Rather than being consigned to the margins when completing assignments, close and careful reading should be the focus of classroom activities. Given the focus of the Common Core State Standards, publishers should be extremely sparing in offering activities that are not text-based. Existing curriculum materials will need to be revised substantially to focus on text-based instruction.

D. Instruction in direct responses to high-quality text.

- Classrooms time on students and teacher-practice responding read/write/speaking and not text-based. Existing curriculum materials should be revised substantially to focus on text-based instruction. Materials should be extremely sparing in offering activities that are not text-based. Existing curriculum materials should be revised substantially to focus on text-based instruction. Materials should be revised substantially to focus on text-based instruction. Materials should be revised substantially to focus on text-based instruction. Materials should be revised substantially to focus on text-based instruction.

- The Common Core State Standards call for students to demonstrate a careful understanding of what they read before asking for further evaluation or interpretation. Questions of interpretation should be concrete and specific, following the details and specific ideas in the text. The text should be the focus of instruction, and all materials should be reflective of instruction materials.

- Instruction materials should be designed to provide scaffolding but also gradually remove those supports as students demonstrate that they have followed the details and logic of an argument. Questions that require students to demonstrate a careful understanding of what they read before asking for further evaluation or interpretation, should be conveyed in a careful underlining of the text. The Common Core State Standards call for further evaluation or interpretation.

- Questions and tasks require careful comprehension of the text before asking for further evaluation or interpretation.
should be to explain/inform, and 5 percent of student writing should be to argue, 5 percent

1. Materials focus on forming arguments as well as informative writing.

In elementary school, 30 percent of student writing should be to argue, 5 percent of student writing should be to explain/inform, and 5 percent should be narrative.

on the National Assessment of Educational Progress (NAEP):

repeated that the balance of writing in elementary school is 30 percent to argue, 5 percent to explain/inform, and 5 percent to narrative.

2. Materials provide guidance to teachers.

The Common Core State Standards require that the balance of writing in elementary school is 30 percent to argue, 5 percent to explain/inform, and 5 percent to narrative.

2. Materials focus on forming arguments as well as informative writing.

While narrative writing is given prominence in early grades, as students progress through the grades the balance of writing shifts to more argumentative writing. The Common Core State Standards ask that the balance of writing be 30 percent to argue, 35 percent to inform/explain, and 35 percent to narrative.

1. Materials provide guidance to teachers.

The Common Core State Standards require that the balance of writing be 30 percent to argue, 35 percent to inform/explain, and 35 percent to narrative.

2. Materials focus on forming arguments as well as informative writing.

While narrative writing is given prominence in early grades, as students progress through the grades the balance of writing shifts to more argumentative writing. The Common Core State Standards ask that the balance of writing be 30 percent to argue, 35 percent to inform/explain, and 35 percent to narrative.

1. Materials provide guidance to teachers.

The Common Core State Standards require that the balance of writing be 30 percent to argue, 35 percent to inform/explain, and 35 percent to narrative.
In middle school, 35 percent of student writing should be to write arguments, 35 percent should be to explain/inform, and 30 percent should be narrative.

In high school, 40 percent of student writing should be to write arguments, 40 percent should be to explain/inform, and 20 percent should be narrative.

These forms of writing are not strictly independent; for example, arguments and explanations often include narrative elements, and both informing and argumenting rely on using information or evidence drawn from texts.

Materials help teachers plan substantive academic discussions. In accordance with the Common Core State Standards, materials should be aligned with the Common Core State Standards for English Language Arts and Reading. They should be designed to promote reading fluency, drawing sufficient evidence from texts, writing coherently with well-developed ideas, and using information from texts, writing fluently with well-developed ideas, and using information from texts.

Materials provide systematic opportunities for students to read complex text, write, listen, and speak.

1. Materials provide systematic opportunities for students to read complex text, write, listen, and speak.

   These materials should support the development of 35 percent of student writing to argue, 35 percent to explain/inform, and 30 percent to narrative.

   These materials should also support the development of 40 percent of student writing to argue, 40 percent to explain/inform, and 20 percent to narrative.

   These materials should be designed to promote reading fluency, drawing sufficient evidence from texts, writing coherently with well-developed ideas, and using information from texts.

   These materials should be designed to support the development of 35 percent of student writing to argue, 35 percent to explain/inform, and 30 percent to narrative.

   These materials should also support the development of 40 percent of student writing to argue, 40 percent to explain/inform, and 20 percent to narrative.

   These materials should be designed to promote reading fluency, drawing sufficient evidence from texts, writing coherently with well-developed ideas, and using information from texts.

   These materials should be designed to support the development of 35 percent of student writing to argue, 35 percent to explain/inform, and 30 percent to narrative.

   These materials should be designed to promote reading fluency, drawing sufficient evidence from texts, writing coherently with well-developed ideas, and using information from texts.

   These materials should be designed to support the development of 35 percent of student writing to argue, 35 percent to explain/inform, and 30 percent to narrative.

   These materials should also support the development of 40 percent of student writing to argue, 40 percent to explain/inform, and 20 percent to narrative.

   These materials should be designed to promote reading fluency, drawing sufficient evidence from texts, writing coherently with well-developed ideas, and using information from texts.

   These materials should be designed to support the development of 35 percent of student writing to argue, 35 percent to explain/inform, and 30 percent to narrative.

   These materials should also support the development of 40 percent of student writing to argue, 40 percent to explain/inform, and 20 percent to narrative.

   These materials should be designed to promote reading fluency, drawing sufficient evidence from texts, writing coherently with well-developed ideas, and using information from texts.
3. Materials use multimedia and technology to deepen attention to evidence and texts.

4. Materials embrace the most significant grammar and language conventions.

CONCLUSION: EFFICACY OF ALIGNED MATERIALS

Curriculum materials must have a clear and documented research base. The most important evidence is that the curriculum accelerates student progress toward career and college readiness. It can be surprising which questions, tasks, and instructions provoke the most productive engagement with text, accelerate student growth, and deepen instructor facility with the materials. A great deal of the material described for the standards will by necessity be new, but as materials are expected to reflect and further develop skills and understandings mastered in preceding grades, thus aligned materials should demonstrate that they embrace clear and powerful language, in addition to meeting each year’s grade-specific standards. Students are expected to learn to approach language as a matter of craft so they can also push students to learn how to approach language in both spoken and written English. They should also indicate when students should adhere to formal conventions and when they should embrace informal language. The materials should also indicate when students should absorb new, sophisticated conventions. The materials aligned with the Common Core State Standards for Reading Literature specifically require students to compare the knowledge they gain from reading texts to the knowledge they gain from other multimedia sources, such as video. The standards for Reading Literature specify that multimedia should be used in a way that engages students in absorbing or expressing details of the text rather than becoming a distraction or replacement for the text. Publishers should provide clear research plans for how the efficacy of their tests in classrooms aligns with the standards. They should base this research and development and refined through actual use and results, with a wide range of students, including English language learners.
INTRODUCTION

This brief addendum to the publishers’ criteria for ELA in grades 3–12 focuses on the portions of the literacy standards for History/Social Studies, Science, and Technical Subjects Literacy Curricula, Grades 6–12, that are most relevant to materials in History/Social Studies, Science, and Technical Subjects.

Meeting the demands of the Literacy Standards requires substantially expanding the Literacy

A. Texts for each grade align with the complexity requirements outlined in the Common Core State Standards.

1. Text Selection

A. Texts for each grade align with the complexity requirements outlined in the Common Core State Standards. The Common Core State Standards require students to read increasingly complex text at every grade with the opportunity to read texts beyond their current grade level to prepare them for the challenges of more complex text.

The Common Core State Standards require students to read texts that align with the complexity requirements outlined in the standards. Teachers are responsible for aligning their texts with the standards. The criteria for ELA in grades 3–12 focus on the portions of the criteria that are most relevant to materials in History/Social Studies, Science, and Technical Subjects. These criteria were developed clear common standards for measuring text complexity that are consistent across different curricula.

I. Text Selection

1. Texts of appropriate quality and complexity for study in these disciplines (Appendix B of the Common Core State Standards contains a sampling of texts for each grade level) should be selected by teachers on the basis of research, and the criteria for selecting texts includes those that are engaging and provide opportunities for students to apply what they have learned. The selection of texts should be based on the standards for reading in history/social studies, science, and technical subjects. The adoption of these standards requires the development of materials that are aligned with the criteria for ELA in grades 3–12.
B. Curriculum include opportunities to combine quantitative information derived from text.

Informational Text

2. Range and Quality of Texts: The Common Core State Standards require a keen focus on

and the world.

A. Curriculum provide texts that are valuable sources of information.

about texts, participate in thoughtful discussions, and gain knowledge of both worlds.

encounter grade-level complex text. For other students, students who have fallen behind

All students (including those who are behind) have extensive opportunities to
All activities involving text require that students demonstrate increasing mastery of reading, writing, and evidence-based reasoning.

B. Curricula provide opportunities for close reading of selected passages from specific texts. Gathering text evidence is equally crucial when dealing with longer specific texts. All high-quality questions and tasks that are text-dependent should require students to demonstrate their understanding of the meaning of the source material that is the focus of the question. Evidence-based reasoning is essential to demonstrate the ability to follow the details of what is explicitly stated and to infer what logically follows from the evidence in the text.（It bears noting that science includes many non-text sources such as experiments, observations, and discourse around these scientific activities.）Once students have read and learned previosly, how do the teacher explain or challenge the source? How well the teacher has just read compared to when the teacher learned the source？Drawing upon relevant prior knowledge, how does the text expand or challenge this knowledge? As students apply knowledge and concepts gained through reading to build a more coherent understanding of a subject, productive connections and comparisons across texts and ideas should be made explicitly through reference to other sources, to wider evidence, and to knowledge from other fields of study.

II. Questions and Tasks

1. High-Quality Text-Dependent Questions and Tasks: Among the highest priorities of the Common Core State Standards is that students be able to read closely and gather and analyze evidence from the text to support their conclusions. Standards might require students to compare their own experimental results to results that they have read, and integrate information from video or other media with what they have learned from text.
Design for whole-group, small-group, and individual instruction cultivates student responsibility and independence.

B. Design with the text.

With the right support, on each other and promote deep thinking and substantive engagement.

When reading, tasks and discussion questions should be sequenced and ordered so that they

1. Writing to Sources and Research

Writing to Sources as a Key Task: Crafting an Argument Frequentely relies on texts and source materials on that topic.

One area by contrasting and analyzing different aspects of the same topic as well as other professional sources, research projects also encourage students to develop expertise in times and develop the expertise needed to conduct research independently. A short research project manually enables students to repeat the research process many additional to more sustained research efforts. Materials should require several of these addition to more sustained research efforts. Materials should require several of these standards that students should conduct several short research projects in.

2. Materials emphasize that student writing should be responsive to the needs of the audience and the particulars of the text in question. As the standards are silent on length and structure, student writing should not be evaluated by whether it follows a traditional formula for paragraph essays. Instead, the common core state standards have been carefully designed to focus on the elements of characteristics of good writing, including drawing sufficient evidence from texts, writing coherently with well-developed ideas, and writing clearly with sufficient command of standard English.

3. Students are given extensive practice with short, focused research projects. Writing Standard 7 emphasizes that students should conduct several short research projects in addition to more sustained research efforts. Materials should require several of these short research projects annually to enable students to repeat the research process many times and develop the expertise needed to conduct research independently.
Appendix: The Publishers’ Criteria for the Common Core State Standards

Mathematics, Grades K–8
These Standards were developed from the experience that publishers and purchasers are equally responsible for fixing the materials market. Publishers cannot deliver focus to buyers who only ever complain about what has been left out, yet never complain about what has crept in. More generally, publishers cannot invest in quality if the market doesn’t demand it of them nor reward them for material inventors

The structure of this document is as follows:

I. Focus, Coherence, and Rigor in the Common Core State Standards for Mathematics

II. Criteria for Materials and Tools Aligned to the K–8 Standards

Appendix: “The Structure is the Standards”

How should alignment be judged? Traditionally, judging alignment has been approached as a crosswalking exercise. But crosswalking can result in large percentages of “aligned content” while obscuring the fact that the materials in question align not at all to the letter or the spirit of the standards. These criteria sharpen the alignment question and make alignment and misalignment more clearly visible.

The K–8 Publishers’ Criteria are structured as follows:

I. Focus, Coherence, and Rigor in the Common Core State Standards for Mathematics

II. Criteria for Materials and Tools Aligned to the K–8 Standards

Appendix: “The Structure is the Standards”

The Common Core State Standards for Mathematics

These Standards are not intended to be new names for old ways of doing business. They are a call to take the next step... It is time to recognize that standards are not just promises to our children, but promises we intend to keep.
I. Focus, Coherence, and Rigor in the Common Core State Standards for Mathematics

Less topic coverage can be associated with higher scores on those topics covered because students have more time

With the advent of the Common Core, a decade’s worth of examinations for greater focus and

consequence: states were not funding achievement by organizing math so that the subject makes sense.

Moreover, prior to the Common Core, state standards were making little progress in terms of

Because the postsecondary survey results indicate that a more rigorous treatment of fundamental content

Because the mathematics concepts in [U.S.] textbooks are often weak, the presentation becomes more

…Because conventional textbook coverage is so fractured, unfocused, and unprioritized, there

Found conceptual weakness in both:

Postsecondary success: the

This finding that postsecondary instructors target fewer skills as being of high importance is consistent with recent

conceptual understanding, procedural skill and fluency, and the ability to apply mathematics to solve problems. Thus, the implications of the standards for mathematics education could be summarized briefly as follows:

Focus

Focus means significantly narrowing the scope of content in each grade so that students achieve at higher levels and experience more deeply that which remains. 

Coherence: think across grades, and link to major topics in each grade

Rigor: in major topics, pursue with equal intensity

conceptual understanding, procedural skill and fluency, and the ability to apply mathematics to solve problems. Thus, the implications of the standards for mathematics education could be summarized briefly as follows:

Focus
Both of the assessment consortia have made the focus, coherence, and rigor of the Standards central to their assessment designs. Choosing materials that also embody the Standards will be essential for giving teachers and students the tools they need to build a strong mathematical foundation and succeed on the coming aligned exams.

Coherence

Coherence is about making math make sense. Mathematics is not a list of disconnected tricks or mnemonics. It is an elegant subject in which powerful knowledge results from reasoning with a small number of principles such as place value and properties of operations. The Standards define progressions of learning that leverage these principles as they build knowledge over the grades.

Coherence has to do with connections between topics. Vertical connections are crucial: these are the links from one grade to the next that allow students to progress in their mathematical education. For example, a kindergarten student might add two numbers using a “count all” strategy, but grade 1 students are expected to use “counting on” and more sophisticated strategies. It is critical to think of addition and subtraction as inverse operations so students can see the connection between them. The Standards also depend on students making connections between ideas within each grade and across grades. Some examples of this can be seen in the Progressions documents. For example, it would not make sense to address cluster 8.EE.B (understanding the connections between proportional relationships, lines, and linear equations) before addressing triangle similarity, as ideas of triangle similarity underlie the very definition of the slope of a line. The Standards do not specify the progression of material within a single grade, but coherence across grades, when combined with connections between topics, can lead to improved focus.

Materials cannot match the contours of the Standards by approaching each individual content standard as a separate event. Nor can materials align to the Standards by approaching each individual grade as a separate event. From the Appendix: “The standards were not so much assembled out of topics as woven out of progressions. Maintaining these progressions in the implementation of the standards will be important for helping all students learn mathematics at a higher level. …” To extract from the focus on arithmetic, the Standards are showing how bar graphs can be positioned to support the major work of the grades. In this way coherence can support focus.

Time.
expressions with letters and later still the study of polynomials. As the application of the properties is extended over the grades, an understanding of how the properties of operations work together should deepen and develop into one of the most fundamental insights into algebra. The natural distribution of prior knowledge in classrooms should not prompt abandoning instruction in grade level content, but rather they set high expectations for all three components of rigor in the major work of each grade. Of course, that makes it necessary that we focus—otherwise we are asking teachers and students to do more with less.

To date, curricula have not always been balanced in their approach to these three aspects of rigor.

Rigor

To help students meet the expectations of the Standards, educators will need to pursue, with equal intensity, three aspects of rigor in the major work of each grade: (1) conceptual understanding, (2) procedural skill and fluency, and (3) applications. The word "rigor" isn't a code word for just one of these three; rather, it means equal intensity in all three. The word "understand" is used to set explicit expectations for conceptual understanding and the phrase "real-world problems" and the symbol (•) are used to set explicit expectations for fluency. The word "model" is used to set explicit expectations for applications and modeling. (Modeling is a needed set of expectations and opportunities for applications and modeling.) A drive to break the Standards down into 'microstandards' risks making the checklist mentality even worse than it is today. Microstandards would also make it easier for microtasks and microlessons to drive out extended tasks and deep learning. Finally, microstandards could allow for micromanagement: Picture teachers and students being held accountable for ever more discrete performances. If it is bad today when principals force teachers to write the standard of the day on the board, think of how it would be if every single standard turns into three, six, or a dozen or more "microstandards."
II. Criteria for Materials and Tools Aligned to the Standards

The single most important flaw in United States mathematics instruction is that the curriculum is “a mile wide and an inch deep.” This finding comes from research comparing the U.S. curriculum to high performing countries, surveys of college faculty and teachers, the National Math Panel, the Early Childhood Learning Report, and all the testimony the CCSS writers heard. The standards are meant to be a blueprint for math instruction that is more focused and coherent. … Crosswalks and alignments and pacing plans and such cannot be allowed to throw away the focus and coherence and regress to the mile-wide curriculum. The criteria can be used to support activities that help communicate the focus, coherence, and rigor of the Standards to students, parents, and others.

—Daro, McCallum, and Zimba, 2012 (from the Appendix)

Using the Criteria

The criteria can be used in several ways:

- Working with previously purchased materials. Most existing materials and tools likely fail to meet one or more of these criteria, even in cases where alignment to the Standards is claimed. Publishers can develop innovative materials and tools that better align to the Standards.
- Informs purchases and adoptions. Schools or districts evaluating materials and tools for purchase can use the criteria to test claims of alignment.
- Professional development. The criteria can be used to support activities that help communicate the shifts in the Standards. For example, teachers can analyze existing materials to reveal how the shifts in the Standards are reflected in the materials, and develop activities and lessons that better align the materials to the Standards.
- Guiding the development of materials. Publishers currently modifying their programs can use the criteria to help shape these projects.
In all these cases, it is recommended that the criteria for focus be attended to first. By attending first to focus, coherence and rigor may realistically develop.

The Standards do not dictate the acceptable forms of instructional resources — to the contrary, they are a historic opportunity to raise student achievement through innovation. Materials and tools of very different forms can meet the criteria, including workbooks, multi-year programs, and targeted interventions. For example, materials and tools that treat a single important topic or domain might be valuable to consider.

Alignment for digital and online materials and tools. Digital materials offer substantial promise for conveying mathematics in new and vivid ways and customizing learning. In a digital or online format, diving deeper and reaching back and forth across the grades is easy and often useful. That can enhance focus and coherence. But if such capabilities are poorly designed, they can also diminish focus and coherence. Designers must avoid the danger of the "the Grand Unified Curriculum," where all the pieces are tightly coordinated and tightly knit, rather than clearly defined and distinct.

Thus, an overarching criterion for materials and tools is that they provide supports for special populations. As noted in the Standards, all students must have the opportunity to learn and meet the same high standards if they are to access the knowledge and skills necessary in their post-school lives. The Standards should be read as allowing the widest possible range of students to participate fully, with appropriate accommodations to ensure maximum participation of students with special education needs.

Thus, an overarching criterion for materials and tools is that they provide supports for special populations. As noted in the Standards (p. 4), all students must have the opportunity to learn and meet the same high standards if they are to access the knowledge and skills necessary in their post-school lives. The Standards should be read as allowing the widest possible range of students to participate fully, with appropriate accommodations to ensure maximum participation of students with special education needs. Materials and tools of very different forms can meet the criteria, including workbooks, multi-year programs, and targeted interventions. For example, materials and tools that treat a single important topic or domain might be valuable to consider.

Materials and tools of very different forms can meet the criteria, including workbooks, multi-year programs, and targeted interventions. For example, materials and tools that treat a single important topic or domain might be valuable to consider.

In all these cases, it is recommended that the criteria for focus be attended to first. By attending first to focus, coherence and rigor may realistically develop.
Focus on Major Work: In any single grade, students and teachers using the materials as designed spend the large majority of their time on the major work of each grade. The materials should devote at least 65% and up to approximately 85% of the class time to the major work of the grade with Grades K–2 nearer the upper end of that range, i.e., 85%. The materials should devote at least 65% and up to approximately 85% of the class time to the major work of the grade with Grades K–2 nearer the upper end of that range, i.e., 85%.

For cluster-level emphases at grades K–2, see http://www.achievethecore.org/downloads/Math%20Shifts%20and%20Major%20Work%20of%20Grade.pdf.

For domain-by-domain progressions in the Standards, see http://ime.math.arizona.edu/progressions.

*Indicates a cluster that is well thought of as part of a student’s progress to algebra, but that is currently not designated as Major by one or both of the assessment consortia in their draft materials. Apart from the asterisked exception, the clusters listed here are a subset of those designated as Major in both of the assessment consortia’s draft documents. ** Depends on similarity ideas from geometry to show that slope can be defined and then used to show that a linear equation has a graph which is a straight line and conversely.
Focus in Early Grades: Materials do not assess any of the following topics before the grade level indicated. As the second column indicates, the Standards as a whole do include the topics in Table 2—they are not being left out. However, in the coherent progression of the Standards, these topics first appear at later grades in order to establish focus. Thus, in aligned materials there are no chapter tests, unit tests, or other such assessment components that make students responsible for any of the above topics before they are introduced in the Standards. (One way to meet this criterion is for materials to omit these topics entirely prior to the indicated grades.)

For more information about this example, see Table 1 in the Progression for K-2 categorical data, and 2-5 measurement data.

3. Focus and Coherence through Supporting Work: Supporting content enhances focus and coherence simultaneously by engaging students in the major work of the grade. For example, materials for K-5 generally treat data displays as an occasion for solving grade-level word problems using the four operations (see 3.MD.3), materials for grade 7 take advantage of opportunities to use probability to support the major work of the grade. For example, the PARCC Model Content Frameworks give examples in each grade of how to improve focus and coherence by linking supporting topics to the major work.

4. Rigor and Balance: Materials and tools reflect the balances in the Standards and help students meet the Standards’ rigorous expectations, by (a) developing students’ conceptual understanding of key mathematical concepts, especially where called for in specific content standards or cluster headings, (b) developing students’ procedural skills and fluency, (c) presenting significant problems and questions at high enough level of computational difficulty (e.g., find a number greater than 1/5 and less than 1/4), (d) building new mathematical knowledge through problem solving, (e) using and connecting mathematical ideas, and (f) representing and interpreting mathematical ideas through language, visual images, models, and the like.
conceptual questions (e.g., ‘If the divisor does not change and the dividend increases, what happens to the quotient?’); and problems that involve identifying correspondences across different mathematical representations of quantitative relationships.13 Classroom discussion about such problems can offer opportunities to engage in mathematical practices such as constructing and critiquing arguments (MP.3). In the materials, conceptual understanding is attended to most thoroughly in those places in the content standards where explicit expectations are set for understanding or interpreting. Such problems and activities center on fine-grained mathematical concepts—place value, the whole-number product \(a \times b\), the fraction \(a/b\), the fraction product \((a/b) \times q\), expressions as records of calculations, solving equations as a process of answering a question, etc. Conceptual understanding of key mathematical concepts is distinct from applications or fluency work, and these three aspects of rigor must be balanced as indicated in the Standards.

Materials in Grades K–5 include a ample number of single-step and multi-step contextual problems that develop the mathematics of the grade, after opportunities for practice, and problems that develop the mathematics of the grade, after opportunities for practice, and do not focus on the major work of each grade.

Materials in Grades K–8 include an ample number of single-step and multi-step contextual problems that develop and  strengthen applications without losing focus on the major work of each grade. Allowing teachers and students using the materials to develop the mathematics of the grade, after opportunities for practice, and do not focus on the major work of each grade.

C. **Structure (MP.7)** and express regularly in repeated reasoning (MP.8).
and students can browse a progression.

The Standards, for example, such materials might link problems and concepts so that teachers promote the Standards’ coherence by teaching the structure and progression in grades levels. Materials for grades 6–8 also include problems in which students must make their own assumptions or simplifications in order to model a situation mathematically. Applications take the form of problems to be worked on individually as well as group activities. The basic model for grade-to-grade progression involves students making tangible progress.

The current year’s resources for remediation may be provided, but previous-grade review is clearly identified as a separate, dedicated review, as opposed to subsumed within the mathematical exploration across each grade level. Remediation is explicitly taught in earlier grades, and students are clear about the need to build progression in materials that match well with those in the Standards. Any discrepancies in content progressions must be clearly aimed at helping students meet the Standards as written, rather than setting up competing requirements.

5. Consistent Progressions: Materials are consistent with the progressions in the Standards, by (all of the following):

- Progressions in materials match well with those in the Standards. Any discrepancies in content progressions enhance the required learning in each grade and are clearly aimed at helping students meet the Standards as written, rather than setting up competing requirements. Comprehensive materials do not contain reviews of previously studied material. Remediation may be needed, particularly during transition years, and remediation is explicitly taught.
- The basic model for grade-to-grade progression involves students making tangible progress.
- Students are clear about the need to build progression in materials that match well with those in the Standards. Any discrepancies in content progressions must be clearly aimed at helping students meet the Standards as written, rather than setting up competing requirements.
- Comprehensive materials do not introduce gaps in learning by omitting any content that is specified in the Standards.
- Progressions in materials match well with those in the Standards. Any discrepancies in content progressions enhance the required learning in each grade and are clearly aimed at helping students meet the Standards as written, rather than setting up competing requirements.
- Comprehensive materials do not introduce gaps in learning by omitting any content that is specified in the Standards.
- Progressions in materials match well with those in the Standards. Any discrepancies in content progressions enhance the required learning in each grade and are clearly aimed at helping students meet the Standards as written, rather than setting up competing requirements.
- Comprehensive materials do not introduce gaps in learning by omitting any content that is specified in the Standards.
- Progressions in materials match well with those in the Standards. Any discrepancies in content progressions enhance the required learning in each grade and are clearly aimed at helping students meet the Standards as written, rather than setting up competing requirements.
- Comprehensive materials do not introduce gaps in learning by omitting any content that is specified in the Standards.
Giving all students extensive work with grade-level problems.

Differentiation is sometimes necessary, but materials often manage unfinished learning from earlier grades inside grade-level work, rather than setting aside grade-level work to reteach earlier content. Unfinished learning from earlier grades is normal and prevalent; it should not be ignored nor used as an excuse for canceling grade-level work and reteaching to below-grade levels. For example, the learning from earlier grades is normal and prevalent. It is not unusual for students to need some reassurance from earlier grades inside grade-level work. The necessary, but materials often manage unfinished learning from earlier grades inside grade-level work.
Practice-Content Connections: Materials meaningfully connect content standards and practice standards. Designers of curricula, assessments, and professional development should all attend to the need to connect the mathematical practices to mathematical content in mathematics instruction. (CCSSM, p. 8.) Over the course of any given year of instruction, each mathematical practice standard is meaningfully present in the form of activities or problems that stimulate students to develop the habits of mind described in the practice standards. These practices are well-grounded in the content standards. The practice standards are not just processes with ephemeral products (such as conversations); they also specify a set of products students are supposed to learn how to produce. Thus, students are expected to produce answers and solutions but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc. Materials are accompanied by an analysis aimed at evaluating how the authors have explained or demonstrated the connections between the practice standards and the content standards.

Focus and Coherence via Practice Standards: Materials promote focus and coherence by connecting practice standards with content that is emphasized in the standards. Content and practice standards are not connected mechanically or randomly, but instead support focus and coherence.

Focus on the role of the practice standards in the classroom and in students' mathematical development. Materials also include teacher-directed materials to grade-appropriate student thinking. Materials do not invent connections not explicit in the standards without first attending thoroughly to the connections that are required by the standards. Materials do not break down the standards in grade-appropriate ways. Materials do not treat the practice standards as static. Instead, each practice standard is connected to content within each applicable grade of the standards. Materials do not invent connections between the five practice standards and the content standards. Materials are accompanied by an analysis aimed at evaluating how the authors have explained or demonstrated the connections between the practice standards and the content standards.
coherence. Examples: Materials connect looking for and making use of structure (MP.7) with structural themes emphasized in the standards such as properties of operations, place value decompositions of numbers, numerators and denominators of fractions, numerical and algebraic expressions, etc.; materials use repeated reasoning (MP.8) as a tool with which to explore content that is emphasized in the standards. (In K-5, materials might use regularity in repetitive reasoning to shed light on, e.g., the $10 \times 10$ addition table, the $10 \times 10$ multiplication table, the properties of operations, the relationship between addition and subtraction or multiplication and division, and the place value system; in 6-8, materials might use regularity in repetitive reasoning to shed light on proportional relationships and linear functions; in high school, materials might use regularity in repetitive reasoning to shed light on formal algebra as well as functions, particularly recursive definitions of functions.)

9.

Careful Attention to Each Practice Standard: Materials attend to the full meaning of each practice standard. For example, MP.1 does not say, “Solve problems.” Or “Make sense of problems.” Or “Make sense of problems and solve them.” It says “Make sense of problems and persevere in solving them.” Thus, it is not enough for students to extend patterns or perform repeated calculations. Those repeated calculations must lead to an insight (e.g., “When I add a multiple of 3 to another multiple of 3, then I get a multiple of 3.”) The analysis for evaluators explains how the full meaning of each practice standard has been attended to in the materials. (For example, for a common core test question that students are asked to solve, the solution might include the steps: “Five less than twice a number $x$ is 45. Find the number.” The answer would then be “The number is 25.”)

10. Emphasis on Mathematical Reasoning: Materials support the Standards’ emphasis on mathematical reasoning, by (all of the following):

a. Prompting students to construct viable arguments and critique the arguments of others concerning key grade-level mathematics that is detailed in the content standards for the grade. Reasoning is not confined to optional or avoidable sections of the materials but is inevitable when using the materials as designed. Materials do not approach reasoning as a generalized imperative, but instead create opportunities for students to reason mathematically and express reasoning through classroom discussion, written work and independent thinking.

b. Materials provide sufficient opportunities for students to reason mathematically and express reasoning that is detailed in the content standards (e.g., MP.3). For example, MP.1 does not say, “Solve problems.” Or “Make sense of problems.” Or “Make sense of problems and solve them.” It says “Make sense of problems and persevere in solving them.” Thus, “solve problems” is not a general imperative but instead a specific cognitive skill that is elaborated in the standards for the grade.

c. Practice standards: For example, MP.1 does not say, “Solve problems.” Or “Make sense of problems and solve them.” It says “Make sense of problems and persevere in solving them.” Therefore, “solve problems” is not a general imperative but instead a specific cognitive skill that is elaborated in the standards for the grade.

definitions of functions (e.g., MP.7) with coherence. Examples: Materials connect looking for and making use of structure (MP.7) with structural themes emphasized in the standards. (In K-5, materials might use regularity in repetitive reasoning to shed light on formal algebra as well as functions, particularly recursive definitions of functions.)
explaining, justifying, showing, or proving. Students are asked to critique given arguments, e.g., by explaining under what conditions, if any, a mathematical statement is valid. Materials develop students' capacity for mathematical reasoning in a grade-level appropriate way, with a reasonable progression of sophistication from early grades up through high school. Teachers and students using the materials as designed spend significant classroom time communicating reasoning (by constructing viable arguments and critiquing the arguments of others). Engaging students in problem solving as a form of argument. Materials address the development of mathematical reasoning through thoroughly to high school.

explicitly attending to the specialized language of mathematics. Mathematical reasoning involves specialized language. Therefore, materials and tools address the development of mathematical and academic language associated with the standards. The language of argument, problem solving and mathematical explanations are taught rather than assumed. Correspondences between language and mathematical representations are explicit rather than assumed. Note that variety in formats and types of representations—graphs, drawings, images, and tables in addition to text—can relieve some of the language demands.

b. Engaging students in problem solving as a form of argument. Materials provide examples of student explanations and arguments (e.g., fictitious student characters might be used by drawing a circle around it). MP (c). Problems and activities of this nature are indicated by drawing a circle around it. Sometimes the goal is to lay out the solution in a sequence of well-justified steps. In such cases, the solution to a problem takes the form of a coherent argument that can be verified and critiqued, instead of a jumble of disconnected steps with a scribbled answer indicated by drawing a circle around it.

The text is considerate of English language learners, helping them to access challenging mathematics. For example, materials might include annotations to help with comprehension of words, sentences and paragraphs, mathematical expressions in multiple forms, and translations into Spanish.

As students progress through the grades, their production and comprehension of mathematical arguments evolves from informal to more precise and formal. Students use imprecise expressions which with practice evolve toward more precise and formal arguments. In early grades, students employ informal expressions such as "we can use this..." and "this is true for every...". In later grades, they use more formal language. In early grades, teachers and students use the materials as designed to develop students' proficiency in a grade-level appropriate way. With development of students' proficiency in a grade-level appropriate way, these places in the content standards that explicitly set expectations for multi-step problems;
A criterion for the mathematics and statistics in materials for science and technical subjects

Lack of alignment in these subjects could have the effect of compromising the focus and coherence of the mathematics Standards. Instead of reinforcing concepts and skills already carefully introduced in math class, teachers of science and technical subjects would have to teach this material in stopgap fashion. That wouldn’t serve students well in any grade, and elementary teachers in particular would preside over a chaotic learning environment.

Consistency with CCSSM: Materials for science and technical subjects are consistent with CCSSM.

Materials for these subjects in K–8 do not subtract from the focus and coherence of the standards by outpacing CCSSM math progressions in grades K–8 or misaligning to them. In Grades 6–8, materials for these subjects also build coherence across the curriculum and support college and career readiness by integrating key mathematics into the disciplines, particularly simple algebra in the physical sciences and technical subjects, and basic statistics in the life sciences and technical subjects (see Table 3 for a possible picture of this alignment across these subjects).

A criterion for the mathematics and statistics in materials for science and technical subjects
Indicators of quality in instructional materials and tools for mathematics

The preceding criteria express important dimensions of alignment to the Standards. The following are some additional dimensions of quality that materials and tools should exhibit in order to give teachers and students the tools they need to meet the Standards.

The following are indicators of quality in instructional materials and tools for mathematics:

1. **Problems in the materials are worth doing:**
   - The underlying design of the materials distinguishes between problems and exercises. Whatever specific terms are used for these two types, in essence the difference is that in solving problems, students learn new mathematics, whereas in working exercises, they are asked to use and extend the mathematics they have already learned.
   - Materials use problems to teach mathematics. Lessons have a few well-designed problems that progressively build understanding. Practice exercises are easy to recognize for their purpose. Other exercises require longer chains of reasoning that help students learn new mathematics.
   - The language in which problems are posed is carefully considered. Note that mathematical problems posed using only ordinary language are a special genre of text that has conventions and structures that need to be learned. The language used to pose mathematical problems should evolve with the grade level and across mathematics content.

2. **There is variety in pacing and grain size of content coverage:**
   - Assignments aren’t haphazardly designed. Exercises are given to students in intentional sequences—examples, a sequence leading from prior knowledge to new knowledge, or a sequence that builds understanding by inviting students to look for and express regularity in repeated reasoning.
   - Each problem or exercise has a purpose—whether to teach new knowledge, build skill, or enhance the student’s ability to think about big ideas.

3. **Materials that develop rigor equally at each content standard do not allow teachers and students to focus where necessary:**
   - The Standards are not written at uniform grain size. Sometimes an individual content standard can require days or weeks to address, while other standards could be addressed within a single lesson. The Standards are not all written to the same level of difficulty. The designs of classes and courses should reflect the range of difficulty in the Standards.

4. **There is variety in what students produce:**
   - Students are asked to produce answers and solutions, but also, in a grade-appropriate way, arguments, explanations, diagrams, mathematical models, etc. In a way appropriate to the grade level, students are asked to use mathematical evidence to develop and justify claims. Whatever specific terms are used for these two types, in essence the difference is that in producing arguments and explanations, students are asked to use the mathematics they have already learned, whereas in working exercises, students are asked to use and extend the mathematics they have already learned.

5. **Correspondence:**
   - The language in which problems are posed is carefully considered. Note that mathematical problems posed using only ordinary language are a special genre of text that has conventions and structures that need to be learned. The language used to pose mathematical problems should evolve with the grade level and across mathematics content.
Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates. Teachers are supported in extending student explanations and modeling explanations of new methods. Lesson structure frequently calls for students to find solutions, explain their reasoning, and ask and answer questions about their reasoning as it concerns problems, diagrams, mathematical models, etc. Over time there is a rhythm back and forth between making sense of concepts and exercising for proficiency.

There are separate teacher materials that support and extend the teacher in leading the class through the learning paths of the units, including:

- Guidance on interaction with students, mostly questions to promote ways of thinking.
- Discussion of student ways of thinking with respect to important mathematical problems and concepts—especially anticipating the variety of student responses.
- Discussion of the mathematics of the units and the mathematical point of each lesson, including:
  - Discussion of desired mathematical behaviors being elicited among the students.
  - Guidance on lesson flow.
  - Guidance on interaction with students, mostly questions to promote ways of thinking.
  - Discussion of desired mathematical behaviors being elicited among the students.
  - Discussion of the mathematics of the units and the mathematical point of each lesson, including:

Materials are carefully reviewed by qualified individuals, whose names are listed, in an effort to ensure:

- Grade-level appropriateness.
- Freedom from mathematical errors.
- Materials using manipulatives or concrete representations.
- The use of manipulatives follows best practices (see, e.g., Adding It Up, 2001):
  - Manipulatives are faithful representations of the mathematical objects they represent. For example, colored chips can be helpful in representing some features of rational numbers, but they do not provide particularly direct representations of all of the important mathematics. The opposite of the opposite of red isn’t clearly blue, for example, and chips aren’t particularly well suited as models for adding rational numbers that are not integers. For this, a number line model is a reasonable model for adding rational numbers that are not integers. (Cf. standards 1.NBT.4, 1.NBT.6, 2.NBT.7, and 5.NBT.7; these are not the only places in the curriculum where making sense of a written method is important.) The word „fluency“ in particular as used in the standards refers to fluency with a written or mental method, not a reasonable method for doing so; nor are colored chips a reasonable method for adding integers. For example, base-ten blocks are a reasonable model for adding within 1000, but not a reasonable method for adding rational numbers with the opposite of the opposite of red not being blue, for example.
  - Manipulatives are connected to written methods. Research indicates that students’ experiences using physical models to represent hundreds, tens, and ones can be effective if connected to written procedures. (Adding It Up, p. 178, emphasis in the original.) For example, base-ten blocks are a reasonable model for adding within 1000, but not a reasonable method for doing so; nor are colored chips a reasonable method for adding integers. (Cf. standards 1.NBT.4, 1.NBT.6, 2.NBT.7, and 5.NBT.7; these are not the only places in the curriculum where connecting to a written method is important). The word “fluently” in particular as used in the Standards refers to fluency with a written or mental method, not a method using manipulatives or concrete representations.

The model may be more appropriate:

- Sometimes errors in materials are simple falsehoods, e.g., printing an incorrect answer to a problem. Other errors are more subtle.
about doing it in English.)

- Freedom from bias (for example, problem contexts that use culture-specific background knowledge do not assume readers from all cultures have that knowledge; simple explanations or illustrations scaffold comprehension).
- Freedom from unnecessary language complexity.
- Support for English language learners is thoughtful and helps those learners to meet the same standards as all other students. Allowing English language learners to collaborate as they strive to learn and show understanding in an environment where English is used as the medium of instruction will give them the support they need to meet their academic goals. Materials can structure interactions in pairs, in small groups, and in the large group (or in any other group configuration) as some English language learners might be shy to share orally with the large group, but might not have problem sharing orally with a small group or in pairs. In addition, when working in pairs, if ELLs are paired up with a student who shares the same language, they might choose to think about and discuss the problems in their first language, and then worry when working in pairs. If ELLs are paired up with a student who shares the same language, they might choose to work in pairs.

The visual design isn’t distracting or chaotic or aimed at adult purchasers, but instead serves only to support young students in engaging thoughtfully with the subject.
You have just purchased an expensive Grecian urn and asked the dealer to ship it to your house. He picks up a hammer, shatters it into pieces, and explains that he will send one piece a day in an envelope for the next year. You object; he says "don't worry, I'll make sure that you get every single piece, and the markings are clear, so you'll be able to glue them all back together. I've got it covered." Absurd, no? But this is the way many school systems require teachers to deliver mathematics to their students; one piece (i.e. one standard) at a time. They promise their customers (the taxpayers) that by the end of the year they will have "covered" all the standards.

In the Common Core State Standards, individual statements of what students are expected to understand and be able to do are embedded within domain headings and cluster headings designed to convey the structure of the subject. "The Standards" refers to all elements of the design—the wording of domain headings, cluster headings, and individual statements; the text of the grade level introductions and high school category descriptions; the placement of the standards for mathematical practice at each grade level; the structure of the standards themselves (domain, cluster, level); the organization of the domain headings; the placement of the mathematical practice standards within and across the domains; the placement of standards for mathematical practice in the standards document; the presentation of the coherence among standards for mathematical practice; and the presentation of the coherence among standards.

Fragmenting the Standards into individual standards, or individual bits of standards, erases all of these relationships and produces a sum of parts that is decidedly less than the whole. Arranging the Standards into new categories produces a remix that is a remix of the Standards. There is meaning contained in the numbered statements beneath them. Remove or reword those headings and you have changed the meaning of the Standards; you now have different Standards. Be that as it may, a remix of a work is not the same as the original work, and with remixes we would not have the single most important flaw of common standards: we would have the same standards that we had before the Common Core.

Why is paying attention to the structure important? Here is why: The single most important flaw in United States mathematics instruction is that the curriculum is "a mile wide and an inch deep." This finding comes from research comparing United States mathematics instruction to high-performing countries, surveys of teachers, and curricular documents. The structure of the subject is not at the core of the curriculum; that is why the single most important flaw is the structure.

The Structure is the Standards

Appendix

The Standards provide a clear lens through which to measure growth in children’s knowledge. Just as the
standards, the Standards were not so much assembled out of topics as woven out of progressions. To

standards, the Standards cannot be allowed to throw away the focus and coherence and regress to the mile-wide curriculum.

college faculty and teachers, the National Math Panel; the Early Childhood Learning Report, and all

SPRING 2013 RELEASE - 04/09/2013
Appendix: The Publishers’ Criteria for the Common Core State Standards

Mathematics, High School
These Standards are not intended to replace previous expectations in English language arts/literacy and mathematics. Instead, the Standards set clear, high expectations for study, practice, and college and career readiness, and provide the knowledge and skills that students need to succeed in higher education and real-life work environments. The Standards are designed to be clear and specific, so teachers and students know exactly what they need to achieve. As with any good framework, the Standards are neither a list of skills, nor a set of curricular offerings. The Standards are a way to ensure that all students receive a full and rigorous education.

Standards by themselves cannot raise achievement. Standards don’t stay up late at night working on lesson plans, or stay after school making sure every student learns. It’s teachers who do that. Standards don’t implement themselves. Education leaders from the Secretary of Education on down have a crucial role to play in putting standards into practice and ensuring all students can use them to achieve. Finally, publishers have a crucial role to play in providing the tools that teachers and students need to meet higher standards. This is why the Common Core was developed by publishers, state content experts, and others to define a sturdy staircase to college and career readiness. Most states have now adopted the Standards to replace previous expectations in English language arts/literacy and mathematics.

How should alignment be judged? Traditionally, judging alignment has been approached as a crosswalking exercise. But crosswalking can result in large percentages of “aligned content” while obscuring the fact that the materials in question align not at all to the letter or the spirit of the Standards. The Standards were developed from the perspective that publishers and purchasers are equally responsible for making materials and instructional programs more clearly visible.

Note that an update to this document is planned for Fall 2013.
I. Focus, Coherence, and Rigor in the High School Standards

This finding that postsecondary instructors target fewer skills as being of high importance is consistent with recent policy statements and findings raising concerns that some states require too many standards to be taught and measured, rather than focusing on the most important state standards for students to attain.

Because the postsecondary survey results indicate that a more rigorous treatment of fundamental content knowledge and skills needed for credit-bearing college courses would better prepare students for postsecondary school and work, strong principles of the Common Core State Standards for Mathematics, which emphasize coherent and focused instruction, are the two major evidence-based design principles of the Common Core State Standards for Mathematics, which emphasize coherent and focused instruction.

Moreover, prior to the Common Core, state standards were making little progress in terms of coherence. States have lacked such discipline and patience. Strong foundations are laid, and further knowledge is built on them, the design principle in those high-performing countries, whose instructional materials are more focused and coherent over the past decade.

With the advent of the Common Core, a decade’s worth of recommendations for greater focus and coherence finally have a chance to bear fruit. Focus and coherence are the two major evidence-based design principles of the Common Core State Standards for Mathematics. These principles are meant to fuel greater achievement in a deep and rigorous curriculum, one in which students acquire conceptual understanding, procedural skill and fluency, and the ability to apply mathematics to solve problems and formulate mathematical models. Thus, the implications of the standards for mathematics education could be summarized briefly as follows:

- Focus: States were not teaching mathematics by organizing math so that the subject makes sense.
- Coherence: States were not learning mathematics by organizing math so that the subject makes sense.
- Rigor: States were not making mathematical progress in terms of the design principles of the Common Core. States standards have become somewhat more focused over the past decade, but in the absence of standards shared across states, instructional materials have not followed suit.

There is evidence that state standards have become more focused and coherent. Moreover, prior to the Common Core, state standards were making little progress in terms of coherence. States have lacked such discipline and patience. Strong foundations are laid, and further knowledge is built on them, the design principle in those high-performing countries, whose instructional materials are more focused and coherent over the past decade.

For years national reports have called for greater focus in U.S. mathematics education. TIMSS and other international studies have concluded that mathematics education in the United States is a mile-wide inch-deep curriculum translates to less time per topic. Less time means less depth and moving on without many students in high-performing countries, such students do not achieve this standard.

Moreover, prior to the Common Core, state standards were making little progress in terms of coherence. States have lacked such discipline and patience. Strong foundations are laid, and further knowledge is built on them, the design principle in those high-performing countries, whose instructional materials are more focused and coherent over the past decade.

Less time means less depth and moving on without many students in high-performing countries, such students do not achieve this standard.
Focus: focus strongly where the standards focus

Coherence: think across grades/courses, and link to major topics in each course

Rigor: in major topics, pursue with equal intensity
- conceptual understanding,
- procedural skill and fluency,
- applications
focus—otherwise we are asking teachers and students to do more with less. Components of rigor in the major work of each grade. Of course, that makes it necessary that we be held accountable for ever more discrete performances. If it is bad today when principals force teachers to write the standard of the day on the board, think of how it would be if every expectation for all three standards do not take sides in these ways, but rather set high expectations for all three.

Just as each mathematics course, at another extreme, some curricula focus on applications, without acknowledging that mathematical education should make students fit for more than just their next mathematics course. High school mathematics builds new and especially in the form of symbolic expressions and graphs. High school mathematics builds new and more sophisticated fluency on top of the earlier fluences from K-8 that centered on numerical fluencies. The word “rigor” isn’t a code word for just one of these three; rather, it means equal intensity in all three. The word “understanding” is used in the Standards to set explicit expectations for understanding, and reasoning from the concrete to the abstract is essential to fluency, seeing structure in expressions, and reasoning from the concrete to the abstract is essential.

To date, curricula have not always been balanced in their approach to these three aspects of rigor. Calculation.

To help students meet the expectations of the Standards, educators will need to pursue, with equal intensity, three aspects of rigor. Some curricula stress fluency without acknowledging that mathematical education should make students fit for more than just their next mathematics course. Some stress conceptual understanding without acknowledging that applications can be highly motivating for students and that mathematical education should make students fit for more than just their next mathematics course. Some stress pure mathematics without acknowledging that applications can be highly motivating. The Standards do not take sides in these ways, but rather set high expectations for all three.
II. Criteria for Materials and Tools Aligned to the High School Standards

Students deserve pathways to college designed as preparation, not as obstacle courses...

Using the criteria...

One approach to developing a document such as this one would have been to develop a separate criterion for each mathematical topic approached in deeper ways in the Standards, a separate criterion for each of the Standards for Mathematical Practice, etc. It is indeed necessary for textbooks to align to the Standards in detailed ways. However, enumerating those details here would have led to a very large number of criteria. Instead, the criteria use the Standards' focus, coherence, and rigor as the main themes. In addition, this document includes a section on indicators of quality in instructional resources—other than textbooks—to help communities work on determining which programs are effective. The Standards do not dictate the acceptable forms of instructional resources...
Alignment for digital and online materials and tools

Digital materials offer substantial promise for conveying mathematics in new and vivid ways and customizing learning. In a digital or online format, diving deeper and reaching back and forth across the grades is easy and often useful. That can enhance focus and coherence. But if such capabilities are poorly designed, focus and coherence can also be diminished. In a setting of dynamic content navigation, the navigation experience must preserve the coherence of Standards clusters and progressions while allowing flexibility and user control: Users can readily see where they are with respect to the structure of the curriculum and its sequence.

A note about high school courses: The High School Standards do not mandate the sequence or organization of high school courses. However, curriculum materials and tools based on a course or organization of high school courses. The authors do not mandate the sequence or order to refer to the indicated text in each case.

Special populations

As noted in the Standards (p. 4), all students must have the opportunity to learn and meet the same high standards if they are to access the knowledge and skills necessary in their post-school lives. The Standards should be read as allowing for the widest possible range of students to participate fully from the outset, along with appropriate accommodations to ensure maximum participation of students with special education needs.

Thus, an over-arching criterion for materials and tools is that they provide supports for special populations such as students with disabilities, English language learners, and gifted students.

For the sake of brevity, the criteria sometimes refer to parts of the Standards using abbreviations such as A.REI.10 (an individual content standard), MP.7 (a practice standard), or F.BF.A.1 (a cluster heading), or as “A.REI.10” (an individual content standard) and “MP.7” (a practice standard). The Standards should be read as allowing the knowledge and skills necessary in their post-school lives. The Standards should be read as allowing for the widest possible range of students to participate fully from the outset, along with appropriate accommodations to ensure maximum participation of students with special education needs.

All students must have the opportunity to learn and meet the same high standards if they are to access digital materials that are smaller than a course.

Special populations, as noted in the Standards (p. 4):
Criteria for Materials and Tools Aligned to the Standards

1. Focus on Widely Applicable Prerequisites: In any single course, students using the materials as designed spend the majority of their time on widely applicable work. Exclusively designed for focus, so that students spend the majority of their time on widely applicable work.

Table 1 lists clusters and standards with relatively wide applicability across a range of postsecondary work. Table 1 is a subset of the material students must study to be college and career ready (CCSSM, pp. 57, 84). But to meet this criterion, materials must give especially careful treatment to the domains, clusters, and standards in Table 1, including their interconnections and applications—amounting to a majority of students’ time.

This criterion also applies to digital or online materials without fixed pacing plans. Such tools are explicitly designed for focus, so that students spend the majority of their time on widely applicable work. Such tools are explicitly designed for focus, so that students spend the majority of their time on widely applicable work.

A note about the codes: Letter codes (A, B, C) are used to denote cluster headings. For example, G-SRT.B refers to the second cluster heading in the domain G-SRT, “Prove theorems using similarity” (pp. 77 of CCSSM).

** See CCSSM, p. 84: “...some of the highest priority content for college and career readiness comes from Grades 6–8. This body of material includes powerfully useful proficiencies such as applying ratio reasoning in real-world and mathematical problems, computing fluently with positive and negative fractions and decimals, and solving real-world and mathematical problems involving angle measure, area, surface area, and volume.”

* Modeling star (present in CCSSM)

o Only the standards without a (+) sign are being cited here.
2. Rigor and Balance: Materials and tools reflect the balances in the Standards and help students meet the Standards’ rigorous expectations, by (all of the following, in the case of comprehensive materials; at least one of the following for supplemental or targeted resources):

a. Developing students’ conceptual understanding of key mathematical concepts, especially where called for in specific content standards or cluster headings. Materials amply feature high-quality conceptual problems and questions. This includes brief conceptual questions (e.g., ‘Is $\sqrt{2}$ a polynomial? How about $\frac{x}{x} + \sqrt{2}$? ’); and problems that involve identifying correspondences across different mathematical representations. Classroom discussion about such problems can offer opportunities to engage in mathematical practices such as constructing and critiquing arguments (MP.3). In the materials, conceptual understanding is attended to most thoroughly in those places in the content standards where explicit expectations are set for understanding or interpreting. Conceptual understanding of key mathematical concepts is distinct from applications or fluency work, and these three aspects of rigor must be balanced as indicated in the Standards.

b. Giving attention throughout the year to procedural skill and fluency. In higher grades, algebra is the language of much of mathematics. Like learning any language, we learn by using it. Sufficient practice with algebraic operations is provided so as to make realistic the attainment of the Standards as a whole, for example, fluency in algebra can help students get past the need to manage computational details so that they can conserve cognitive capacity to engage in higher-level mathematical reasoning and argumentation (MP.3). Progress toward procedural fluency is interwoven with students’ developing conceptual understanding of the operations in question. Expressions that express a general, non-linear relationship (e.g., $(x^2 + 8) - c^2 = 3((c - 1)^2 - 5)$) are given so that students can compare and contrast with the written and symbolic methods to which they refer. As well, pure procedural problems and exercises are featured. Manipulatives and concrete representations are connected to the written and symbolic methods, and purely procedural problems and exercises are provided so that students can learn and practice efficient and general methods (e.g., solving $c + 8 - c^2 = 3(c - 1)^2 - 5$). Methods and algorithms are general and based on principles of mathematics, not mnemonics or tricks.
Allowing teachers and students using the materials as designed to spend sufficient time working with engaging applications/modeling. Materials include an ample number of contextual problems that develop the mathematics of the course, afford opportunities for practice, and engage students in problem solving. Materials also include problems in which students must make their own assumptions or simplifications in order to model a situation mathematically. Applications take the form of problems to be worked on individually as well as classroom activities centered on application scenarios. Materials attend thoroughly to those places in the content standards where expectations for multi-step and real-world problems are explicit. Students learn to use the content knowledge and skills specified in the content standards in applications, with particular stress on applying knowledge and skills in real-world settings. Materials must make clear from presentation of simplifications in order to model a situation that students have made their own assumptions or simplifications in order to model a situation mathematically. Applications are explicit, and engage students in problem solving. Materials also include problems in which students are encouraged to explore, to make conjectures, and to use mathematics to model and solve problems. Materials include an ample number of high-school-level problems that involve applying key takeaways from Grades K–8; see Table 2.7 From CCSSM, p. 72, “The evidence concerning college and career readiness shows clearly that the knowledge, skills, and practices...”
3. Consistent Content: Materials are consistent with the content in the Standards, by (all of the following):

   a. Basing courses on the content specified in the Standards. Coursed-level problems in the materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge. Course-level problems in the materials often involve application of knowledge learned in earlier grades and courses. Although students may well have learned this earlier content, they have not learned how it extends to new mathematical situations and applications. They learn basic ideas of functions, for example, and then extend them to deal explicitly with domains. They learn about expressions as recording calculations with numbers, and then extend them to symbolize operations in their own right. The materials make these extensions of prior knowledge explicit. Thus, materials continuously integrate new material with old.

   b. Giving all students extensive work with course-level problems. Previous-grades review and previous-course review is clearly identified as such to the teacher, and teachers and students can browse a digital and online materials that allow students and teachers to navigate content across standards.

   c. Relating course-level concepts explicitly to prior knowledge from earlier grades and courses.

   d. Giving all students extensive work in deeper directions, not just exposed to lower courses’ topics.

   e. Differentiation is sometimes necessary, but materials often manage unfinished learning from earlier grades and courses.

   f. Previous-course review is clearly identified as such to the teacher, and teachers and students can browse a digital and online materials that allow students and teachers to navigate content across standards.

4. Basing Courses on the Content Specified in the Standards: Course-level problems in the materials are designed so that prior knowledge becomes reorganized and extended to accommodate the new knowledge. Course-level problems in the materials often involve application of knowledge learned in earlier grades and courses. Although students may well have learned this earlier content, they have not learned how it extends to new mathematical situations and applications. They learn basic ideas of functions, for example, and then extend them to deal explicitly with domains. They learn about expressions as recording calculations with numbers, and then extend them to symbolize operations in their own right. The materials make these extensions of prior knowledge explicit. Thus, materials continuously integrate new material with old.

   a. Basing courses on the content specified in the Standards.    c. Relating course-level concepts explicitly to prior knowledge from earlier grades and courses.

   d. Giving all students extensive work in deeper directions, not just exposed to lower courses’ topics.

   e. Differentiation is sometimes necessary, but materials often manage unfinished learning from earlier grades and courses.

   f. Previous-course review is clearly identified as such to the teacher, and teachers and students can browse a digital and online materials that allow students and teachers to navigate content across standards.

Following:
4. Coherent Connections: Materials foster coherence through connections in a single course.

a. Including learning objectives that are visibly shaped by CCSSM cluster and domain headings.

Cluster headings and domain headings in the High School standards function like topic sentences in a paragraph in that they state the point of, and lend additional meaning to, the individual content standards that follow. Cluster or domain headings in High School also sometimes signal important content-practice connections, e.g., “Seeing Structure in Expressions” connects expressions to MP.7 and “Reasoning with Equations and Inequalities” connects solving to MP.3. Hence an important criterion for coherence is that some or many of the learning objectives in the materials are visibly shaped by CCSSM cluster and domain headings.

b. Including problems and activities that serve to connect two or more clusters in a domain, two or more domains in a category, or two or more categories in a cluster. If instruction only operates at the individual standard level, or even at the individual cluster level, then some important connections will be missed. For example, connecting equations (see A-REI) isn’t very valuable unless students can also solve them (see A-CED). Materials do not invent connections not explicit in the standards without first attending thoroughly to the connections that are required explicitly in the standards (e.g., A-REI.11 connects functions to equations in a graphical context). Not everything in the standards is naturally well connected or needs to be connected (e.g., systems of linear equations aren’t well thought of in relation to functions, and connecting these two things is incoherent). Instead, connections in materials are mathematically natural and important (e.g., work with quadratic functions and work with quadratic equations), reflecting plausible direct implications of what is written in the standards without creating additional requirements.

c. Preserving the focus, coherence, and rigor of the standards even when targeting specific objectives. Sometimes a content standard is a compound statement, such as “Do X and do Y.” Sometimes a content standard is a compound statement, such as “Do X or do Y.”

5. Practice-Content Connections: Materials meaningfully connect content standards and practice standards.

Practice-Content Connections: Materials meaningfully connect content standards and practice standards.

Additional Requirements:

Including problems that require the application of what is written in the standards without creating additional requirements.

Less important problems (e.g., work with quadratic functions and work with quadratic equations) are well-grounded in the content standards, as well as to architecture documents. These two things are interconnected; interconnected content standards are mathematically natural.

Everytime in the standards is naturally well-connected to the content standards that are required explicitly in the without first attending thoroughly to the connections that are required explicitly in the standards (e.g., A-REI.11 connects functions to equations in a graphical context). Not everything in the standards is naturally well connected or needs to be connected (e.g., systems of linear equations aren’t well thought of in relation to functions, and connecting these two things is incoherent). Instead, connections in materials are mathematically natural and important (e.g., work with quadratic functions and work with quadratic equations), reflecting plausible direct implications of what is written in the standards without creating additional requirements.

Including problems and activities that serve to connect two or more clusters in a domain, two or more categories in a cluster.

b. Including problems and activities that serve to connect two or more clusters in a domain, two or more domains in a category, or two or more categories in a cluster.

Including problems and activities that serve to connect two or more clusters in a domain, two or more categories in a cluster.

Additional Requirements:

Including problems that require the application of what is written in the standards without creating additional requirements.

Less important problems (e.g., work with quadratic functions and work with quadratic equations) are well-grounded in the content standards, as well as to architecture documents. These two things are interconnected; interconnected content standards are mathematically natural.

Everytime in the standards is naturally well-connected to the content standards that are required explicitly in the without first attending thoroughly to the connections that are required explicitly in the standards (e.g., A-REI.11 connects functions to equations in a graphical context). Not everything in the standards is naturally well connected or needs to be connected (e.g., systems of linear equations aren’t well thought of in relation to functions, and connecting these two things is incoherent). Instead, connections in materials are mathematically natural and important (e.g., work with quadratic functions and work with quadratic equations), reflecting plausible direct implications of what is written in the standards without creating additional requirements.
The practice standards are not just processes with ephemeral products (such as conversations). They also specify a set of products students are supposed to learn how to produce. Thus, students are asked to produce answers and solutions but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc.

Materials are accompanied by an analysis, aimed at evaluators, of how the authors have approached each practice standard in relation to content within each applicable course and provide suggestions for delivering content in ways that help students meet the practice standards in course-appropriate ways. Materials tailor the connections to the content of the grade and to course-level-appropriate student thinking. Materials also include teacher-directed materials that explain the role of the practice standard in the classroom and in students' mathematical development.

6. Focus and Coherence via Practice Standards: Materials promote focus and coherence by connecting practice standards with content that is emphasized in the Standards. Content and practice standards are not connected mechanistically or randomly, but instead support focus and coherence. Examples: Materials connect looking for and making use of structure (MP.7) with structural themes emphasized in the standards, such as purposefully transforming expressions, linking the structure of an expression to a feature of its context, grasping the behavior of a function defined by an expression, etc.; materials use looking for and expressing regularity in repeated reasoning (MP.8) to shed light on algebra and functions, e.g., by summarizing repeated numerical examples in the form of equations or in the form of recursive expressions that define functions.

Materials include problems that reward students' strategic decisions about how to use tools, or about whether to use them at all. MP.5 does not say, “Use appropriate tools.” It says “Use appropriate tools strategically.” Thus, materials include problems that reward students' strategic decisions about how to use tools, or about whether to use them at all. PM.8 does not say, “Use tools.” It says “Use appropriate tools.” Thus, materials include problems that reward students' strategic decisions about how to use tools, or about whether to use them at all.

7. Careful Attention to Each Practice Standard: Materials attend to the full meaning of each practice standard. For example, MP.1 does not say, “Solve problems.” Or “Make sense of problems.” It says “Make sense of problems and persevere in solving them.” Thus, students using the materials as designed build their perseverance in solving problems beyond the point when they would like to give up.

constant, the graph of the function shifts $k$ units to the right.

The analysis for evaluators explains how the full meaning of each practice standard has been attended to in the materials.

8. Emphasis on Mathematical Reasoning: Materials support the Standards’ emphasis on mathematical reasoning, by (all of the following):

a. Prompting students to construct viable arguments and critique the arguments of others concerning key course-level mathematics that is detailed in the content standards (cf. MP.3).

b. Engaging students in problem solving as a form of argument—recognizing that learning mathematics also involves working on applications and practicing procedures.

c. Explicitly attending to the specialized language of mathematics. Materials attend thoroughly to the following:

- Correlations between language and mathematical representations involving specialized language associated with the Standards’ emphasis on mathematical reasoning, and attending to the development of specialized language. Therefore, materials and tools address the development of mathematical reasoning involving specialized language. The language of argument, problem solving and mathematical explanation are taught rather than assumed.

Materials provide examples of student explanations and arguments (e.g., fictitious student characters might be portrayed), and give students opportunities to reason mathematically and express reasoning through classroom discussion, work and independent thinking. Materials provide sufficient opportunities for students to reason about and communicate key course-level mathematics that is detailed in the content standards (cf. MP.3). Materials provide explicit expectations for multi-step problems; those places in the content standards that explicitly expect multi-step problems.

- Engaging students in problem solving as a form of argument—recognizing that learning mathematics also involves working on applications and practicing procedures.

- Explicitly attending to the specialized language of mathematics. Mathematics involves specialized language. Therefore, materials and tools address the development of mathematical and academic language associated with the Standards. The language of argument, problem solving and mathematical explanation are taught rather than assumed.

- Materials provide explicit expectations for mathematical reasoning.

- Materials provide explicit expectations for mathematical reasoning.

- Materials provide explicit expectations for mathematical reasoning.

- Materials provide explicit expectations for mathematical reasoning.
diagrams, tables, graphs, and symbolic expressions are identified in material designed for language development. Note that variety in formats and types of representations—graphs, drawings, images, and tables in addition to text—can relieve some of the language demands that English language learners face when they have to show understanding in math. The text is considerate of English language learners, helping them to access challenging mathematics and helping them to develop grade level language. For example, materials might include annotations to help with comprehension of words, sentences and paragraphs, and might also include examples of the use of words in other situations. Modifications to language do not sacrifice the mathematics, nor do they put off necessary language development.

A criterion for the mathematics and statistics in materials for science and technical subjects is consistency with CCSSM. Materials for science and technical subjects are consistent with CCSSM. High school materials for these subjects build coherence across the curriculum and support college and career readiness by integrating key mathematics into the disciplines.

Lack of alignment in these subjects could have the effect of compromising the focus and coherence of the mathematics Standards. Instead of reinforcing concepts and skills already carefully introduced in math class, teachers of science and technical subjects would have to teach this material in stopgap fashion.

Table 2: High school science and technical subjects.
Indicators of quality in instructional materials and tools for mathematics

The preceding criteria express important dimensions of alignment to the Standards. The following are some additional dimensions of quality that materials and tools should exhibit in order to meet the Standards. The following are indicators of quality in instructional materials and tools for mathematics:

- The Standards are not written as uniform grain size. Sometimes an individual content standard requires a commodity; they forbid concentration, and they make focus and coherence unlikely.
- The language in which problems are posed is carefully considered. Note that mathematical problems posed using only ordinary language are a special genre of text that has conventions problems posed using only ordinary language are a special genre of text that has conventions.
- Assignments are not randomly designed. Exercises are given to students in intentional sequences for example, a sequence leading from prior knowledge to new knowledge, or a sequence leading from concrete to abstract, or a sequence that builds from a concept to a procedure.
- Mathematics are taught purposefully. Exercises have a purpose—whether to teach new knowledge, build skill or fluency, or engage the student in one or several mathematical practices.
- Each problem or exercise has a purpose—whether to teach new knowledge, build skill or fluency, or engage the student in one or several mathematical practices.
- Materials that devote roughly equal time to each content standard do not allow teachers and students to focus on where necessary.
- Materials that devote roughly equal time to each content standard do not allow teachers and students to focus where necessary.
- Materials that devote roughly equal time to each content standard do not allow teachers and students to focus where necessary.

- Materials that devote roughly equal time to each content standard do not allow teachers and students to focus where necessary.
- Materials that devote roughly equal time to each content standard do not allow teachers and students to focus where necessary.
There is variety in what students produce: Students are asked to produce answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc. In a way appropriate to the grade level, students are asked to answer questions or develop explanations about why a solution makes sense, how quantities are represented in expressions, and how elements of symbolic, diagrammatic, tabular, graphical, and/or verbal representations correspond.

Lessons are thoughtfully structured and support the teacher in leading the class through the learning paths at hand, with active participation by all students in their own learning and in the learning of their classmates. Teachers are supported in extending student explanations and modeling explanations of new methods.

The use of manipulatives follows best practices (see, e.g., Adding It Up, 2001):

- Materials are carefully reviewed by qualified individuals, whose names are listed, in an effort to ensure:
  - Materials are carefully reviewed by qualified individuals, whose names are listed, in an effort to ensure:
  - Manipulatives are faithful representations of the mathematical objects they represent.
  - Manipulatives are connected to written methods. For example, algebra tiles are a reasonable model of certain features of algebra, but not a reasonable model for doing algebra. For example, algebra tiles are a reasonable model of certain features of algebra, but not a reasonable method for doing algebra.
  - Manipulatives are often used with high degree of skill and fluency. They are used in a written or mental method, not a method using models of certain features of algebra, but not a reasonable method for doing algebra. For example, algebra tiles are a reasonable model of certain features of algebra, but they do not provide a particularly well-suited as models for polynomials having non-integer coefficients. The answer, however, can be helpful in representing some features of algebra, but they do not provide a particularly well-suited as models for polynomials having non-integer coefficients. For example, algebra tiles are a reasonable model of certain features of algebra, but they do not provide a particularly well-suited as models for polynomials having non-integer coefficients. For example, algebra tiles are a reasonable model of certain features of algebra, but they do not provide a particularly well-suited as models for polynomials having non-integer coefficients. For example, algebra tiles are a reasonable model of certain features of algebra, but they do not provide a particularly well-suited as models for polynomials having non-integer coefficients.

There are separate teacher materials that support and reward teacher study, including:

- Discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit.
- Discussion of student ways of thinking with respect to important mathematical problems and concepts—especially articulating the variety of student responses.
- Discussion of student ways of thinking with respect to important mathematical problems and concepts—especially articulating the variety of student responses.
- Discussion of the mathematics of the unit and the mathematical point of each lesson as it relates to the organizing concepts of the unit.

Discussions of desired mathematical behaviors being elicited among the students.

Guidance on Lesson Flow:

- Discussion of desired mathematical behaviors being elicited among the students.
- Discussion of desired mathematical behaviors being elicited among the students.

- Discussion of the mathematics of the units and the mathematical point of each lesson as it relates to the organizing concepts of the unit.
- Discussion of student ways of thinking with respect to important mathematical problems and concepts—especially articulating the variety of student responses.
- Discussion of student ways of thinking with respect to important mathematical problems and concepts—especially articulating the variety of student responses.
- Discussion of the mathematics of the unit and the mathematical point of each lesson as it relates to the organizing concepts of the unit.

Discussions of desired mathematical behaviors being elicited among the students.

Guidance on Lesson Flow:

- Discussion of desired mathematical behaviors being elicited among the students.
- Discussion of desired mathematical behaviors being elicited among the students.

There is variety in what students produce: Students are asked to produce answers and solutions, but also, in a course-appropriate way, arguments, explanations, diagrams, mathematical models, etc. In a way appropriate to the grade level, students are asked to answer questions or develop explanations of new methods.
Age-appropriateness

- Freedom from bias (for example, problem contexts that use culture-specific background knowledge do not assume readers from all cultures have that knowledge; simple explanations or illustrations or hints scaffold comprehension).
- Freedom from unnecessary language complexity.
- Age-appropriateness

- Support for English language learners is thoughtful and helps those learners to meet the same standards as all other students. Allowing English language learners to collaborate as they strive to learn and show understanding in an environment where English is used as the medium of instruction will give them the support they need to meet their academic goals. Materials can structure interactions in pairs, in small groups, and in the large group (or in any other group configuration) as some English language learners might be shy to share orally with the large group, but might not have problem sharing orally with a small group or in pairs. (In addition, allowing English language learners to work in pairs, in small groups, and in the large group (or in any other group configuration) as some English language learners might be shy to share orally with the large group, but might not have problem sharing orally with a small group or in pairs.

- The visual design isn't distracting or chaotic, or aimed at adult purchasers, but instead serves only to support young students in engaging thoughtfully with the subject.
Appendix

"Lasting Achievements in K–8"

Most of the K–8 content standards trace explicit steps A → B → C in a progression. This can sometimes make it seem as if any given standard only exists for the sake of the next one in the progression. There is power in understanding or assessing the standards (i.e., sometimes all the standards for a particular grade level). But it is also important to recognize that these are crucial tools for college, work, and life. They are not meant to gather dust during high school, but are meant to be applied in college and life.

As indicated in the quotation from the Standards, skills like these are crucial tools for college, work, and life. Most of the K–8 content standards trace explicit steps A → B → C in a progression. This can sometimes make it seem as if any given standard only exists for the sake of the next one in the progression. There is power in understanding or assessing the standards (i.e., sometimes all the standards for a particular grade level). But it is also important to recognize that these are crucial tools for college, work, and life. They are not meant to gather dust during high school, but are meant to be applied in college and life.

As indicated in the quotation from the Standards, skills like these are crucial tools for college, work, and life. Most of the K–8 content standards trace explicit steps A → B → C in a progression. This can sometimes make it seem as if any given standard only exists for the sake of the next one in the progression. There is power in understanding or assessing the standards (i.e., sometimes all the standards for a particular grade level). But it is also important to recognize that these are crucial tools for college, work, and life. They are not meant to gather dust during high school, but are meant to be applied in college and life.

One example of a standard that refers to skills that remain important well beyond middle school is 7.EE.3:

Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies. For example: If a woman making $25 an hour gets a 10% raise, she will make an additional 1/10 of her salary an hour, or $2.50, for a new salary of $27.50. If you want to place a towel bar 9 3/4 inches long in the center of a door that is 27 1/2 inches wide, you will need to place the bar about 9 inches from each edge. This estimate can be used as a check on the exact computation.

Other lasting achievements from K–8 would include working with proportional relationships and unit rates (6.RP.3; 7.RP.1,2); working with percentages (6.RP.3e; 7.RP.3); and working with area, surface area, and volume (7.G.4,6).

As indicated in the quotation from the Standards, skills like these are crucial tools for college, work, and life. Most of the K–8 content standards trace explicit steps A → B → C in a progression. This can sometimes make it seem as if any given standard only exists for the sake of the next one in the progression. There is power in understanding or assessing the standards (i.e., sometimes all the standards for a particular grade level). But it is also important to recognize that these are crucial tools for college, work, and life. They are not meant to gather dust during high school, but are meant to be applied in college and life.

standards as well as the demands of the high school standards and readiness for careers and a wide range of college majors.

As shown in the figure, standards like 7.EE.3 are best thought of as descriptions of component skills that will be applied flexibly during high school, not as descriptions of component skills that will be applied flexibly during high school in tandem with others in the course of modeling tasks that will be applied flexibly during high school in tandem with others in the course of modeling tasks that will be applied flexibly during high school in tandem with others in the course of modeling tasks that will be applied flexibly during high school in tandem with others in the course of modeling tasks.

Overall, the importance for college and career readiness might easily be missed in this overall flow, which might easily be missed in this overall flow, which might easily be missed in this overall flow, which might easily be missed in this overall flow, which might easily be missed in this overall flow.
